K. Keshavan, 1992 *Selection and Use of Wear Tests for Metals*, 1976 **Coatings Tribology** Kenneth Holmberg, Allan Matthews, 2009-03-18 The surface coating field is a rapidly developing area of science and technology that offers new methods and techniques to control friction and wear New coating types are continually being developed and the potential applications in different industrial fields are ever growing ranging from machine components and consumer products to medical instruments and prostheses This book provides an extensive review of the latest technology in the field addressing techniques such as physical and chemical vapour deposition the tribological properties of coatings and coating characterization and performance evaluation techniques Eleven different cases are examined in close detail to demonstrate the improvement of tribological properties and a guide to selecting coatings is also provided This second edition is still the only monograph in the field to give a holistic view of the subject and presents all aspects including test and performance data as well as insights into mechanisms and interactions thus providing the level of understanding vital for the practical application of coatings An extensive review of the latest developments in the field of surface coatings Presents both theory and practical applications Includes a guide for selecting coatings *Wear Testing of Advanced Materials* Ramesh Divakar, 1992 **Selected Library Acquisitions** United States. Department of Transportation, **Coatings Tribology** K. Holmberg, A. Matthews, 1994-07-15 This book presents a general view on thin surface coatings used for tribological applications and it is based on the current state of understanding The mechanisms of friction and wear in sliding and rolling contacts of coated surfaces are described Basic information on coating techniques tribology and surface mechanisms is given Based on collected experimental works information is given on the properties of thin soft coatings such as polymer lamellar solid and soft metal coatings thin hard coatings such as nitride carbide oxide boride and diamond and diamond like coatings and multi component and multi layer coatings The influence of interface layers and lubricants is highlighted The methods available for characterization of coated surfaces and for mechanical and chemical evaluation of their tribological properties are described Tribological evaluation methods for accelerated and field testing and the need for standardization of quality assurance procedures are discussed A methodology for the selection of thin coatings for tribological applications is presented and knowledge based expert system approaches for coating selection are reviewed For different application examples the basic tribological contact mechanisms are described and the possibilities for improving their tribological properties by using surface coatings are discussed The application examples include sliding and rolling bearings gears tools for cutting and forming erosion resistant applications magnetic recording systems and bio medical implants **Friction and Wear of Selected Metals and of Carbons in Liquid Natural Gas** Donald W. Wisander, 1971 Friction and wear experiments were conducted with hemispherically tipped 4.76 mm radius rider specimens in sliding contact with a rotating disk submerged in

liquid natural gas LNG The program included metal combinations and carbon metal combinations These experiments revealed that the metal combinations were not lubricated by the LNG Carbons had much lower wear in LNG than in liquid hydrogen or in liquid nitrogen Wear of carbon in liquid hydrogen was 100 times that in LNG The friction coefficients obtained in LNG 0.6 for metal metal and 0.2 for carbon metal are similar to those obtained in liquid hydrogen
