Bickhard, 2012-11-29 What is a person Surprisingly little attention is given to this question in psychology For much of the past century psychology has tended to focus on the systematic study of processes rather than on the persons who enact and embody them In contrast to the reductionist picture of much mainstream theorising which construes persons as their mental lives behaviours or neurophysiological particulars *The Psychology of Personhood* presents persons as irreducibly embodied and socially situated beings Placing the study of persons at the centre of psychology this book presents novel insights on the typical everyday actions and experiences of persons in relation to each other and to the broader society and culture Leading scholars from diverse academic disciplines paint an integrative portrait of the psychological person within evolutionary historical cultural developmental and everyday contexts **The Development of the Mediated Mind** Joan M. McAdams, 2016-10-26 Drawing on state of the art personality and developmental research this book presents a new and broadly integrative theory of how people come to be who they are over the life course Preeminent researcher Dan P McAdams traces the development of three distinct layers of personality the social actor who expresses emotional and behavioral traits the motivated agent who pursues

Future Orientation Rachel Seginer, 2009-04-21 By contemporary I mean a present with an anticipated future for we must do our best to overcome clinical habits which make us assume that we have done our part if we have clarified the past Erikson 1968 pp 30 31 The scope of time ahead which influences present behavior and is therefore to be regarded as part of the present life space increases during development This change in time perspective is one of the most fundamental facts of development Adolescence seems to be a period of particularly deep change in respect to time perspective Lewin 1939 p 879 I chose to open this book with two excerpts from Erikson s and Lewin s writings because they indicate that future orientation has had its deep roots in psychological thinking and call readers attention to the long standing interest in two fundamental issues the motivational power of constructed future images and their development across age More specifically Erikson and Lewin s writings underscore the importance of future thinking for influencing present behavior tendencies and point out that the ability to think about the future and realize the scope of time ahead increase with age and reach a special developmental significance in adolescence

Developmental Perspectives on Motivation Janis E. Jacobs, 1993-01-01 Some of the best current

work on the development of motivation is presented in this fortieth volume of the Nebraska Symposium on Motivation. The diverse approaches for conceptualizing and studying motivational development psychology that extends the traditional area of achievement motivation. Some major themes emerge: the conceptualization of the self; the internal and external factors that affect development of motivations; and the choices that result from one's motivations. Richard Ryan's opening chapter places the entire work in context by describing historical and theoretical perspectives on developmental and psychosocial models used to understand motivation. Mihaly Csikszentmihalyi and Kevin Rathunde also focus on intrinsic motivation but with a greater focus on flow: the experience of full involvement with an activity. Susan Harter discusses the roles of the I self and the me self research models. Jacquelynne S. Eccles stresses the link between the social contexts of family and school and the motivational constructs related to achievement and choice of activity. Laura L. Carstensen maintains Eccles's focus on the importance of choice of activity but concentrates on the later stages in life when social contact declines as a result of changing social and emotional motivations. The volume concludes with a summary analyzing the contributors' descriptions of the diverse but complementary aspects of developmental processes and theory.

The Routledge Handbook of Philosophy of the Social Mind Julian Kiverstein, 2016-11-18. The idea that humans are by nature social and political animals can be traced back to Aristotle. More recently it has also generated great interest and controversy in related disciplines such as anthropology, biology, psychology, neuroscience, and even economics. What is it about humans that enabled them to construct a social reality of unrivalled complexity? Is there something distinctive about the human mind that explains how social lives are organised around conventions, norms, and institutions? The Routledge Handbook of Philosophy of the Social Mind is an outstanding reference source to the key topics and debates in this exciting subject and is the first collection of its kind. An international team of contributors present perspectives from diverse areas of research in philosophy, drawing on comparative and developmental psychology, evolutionary anthropology, cognitive neuroscience, and behavioural economics. The thirty-two original chapters are divided into five parts: The evolution of the social mind including the social intelligence hypothesis, co-evolution of culture and cognition, ethnic cognition and cooperation; Developmental and comparative perspectives including primate and infant understanding of mind, shared intentionality and moral cognition; Mechanisms of the moral mind including norm compliance, social emotion and implicit attitudes; Naturalistic approaches to shared and collective intentionality including joint action, team reasoning and group thinking; and social kinds. Social forms of selfhood and mindedness including moral identity, empathy and shared emotion, normativity and intentionality. Essential reading for students and researchers in philosophy of mind and psychology. The Routledge Handbook of Philosophy of the Social Mind is also suitable for those in related disciplines such as social psychology, cognitive neuroscience, economics, and sociology.

Metaphysics and Cognitive

Science Alvin I. Goldman, Brian P. McLaughlin, 2019-03-27 This volume illustrates how the methodology of metaphysics can be enriched with the help of cognitive science Few philosophers nowadays would dispute the relevance of cognitive science to the metaphysics of mind but this volume mainly concerns the relevance of metaphysics to phenomena that are not themselves mental The volume is thus a departure from standard analytical metaphysics Among the issues to which results from cognitive science are brought to bear are the metaphysics of time of morality of meaning of modality of objects and of natural kinds as well as whether God exists A number of chapters address the enterprise of metaphysics in general In traditional analytical metaphysics intuitions play a prominent role in the construction of and assessment of theories Cognitive science can be brought to bear on the issue of the reliability of intuitions Some chapters point out how results from cognitive science can be deployed to debunk certain intuitions and some point out how results can be deployed to help vindicate certain intuitions Many metaphysicians have taken to heart the moral that physics should be taken into account in addressing certain metaphysical issues The overarching point of the volume is that in many instances beyond the nature of the mind itself cognitive science should also be consulted *The Cambridge Handbook of Sociocultural Psychology* Alberto Rosa, Jaan Valsiner, 2018-07-12 Sociocultural psychology is a discipline located at the crossroads between the natural and social sciences and the humanities This international overview of the field provides an antireductionist and comprehensive account of how experience and behaviour arise from human action with cultural materials in social practices The outcome is a vision of the dynamics of sociocultural and personal life in which time and developmental constructive transformations are crucial This second edition provides expanded coverage of how particular cultural artefacts and social practices shape experience and behaviour in the realms of art and aesthetics economics history religion and politics Special attention is also paid to the development of identity the self and personhood throughout the lifespan while retaining the emphasis on experience and development as key features of sociocultural psychology

Cognitive Approaches to Old English Poetry Antonina Harbus, 2012 Offers an entirely new way of interpreting and examining Anglo Saxon texts via theories derived from cognitive studies A major thoughtful study applying new and serious interpretative and critical perspectives to a central range of Old English poetry Professor John Hines Cardiff University Cognitive approaches to literature offer new and exciting ways of interpreting literature and mentalities by bringing ideas and methodologies from Cognitive Science into the analysis of literature and culture While these approaches are of particular value in relation to understanding the texts of remote societies they have to date made very little impact on Anglo Saxon Studies This book therefore acts as a pioneer mapping out the new field explaining its relevance to Old English Literary Studies and demonstrating in practice its application to a range

of key vernacular poetic texts including Beowulf The Wanderer and poems from the Exeter Book Adapting key ideas from three related fields Cognitive Literary Cultural Studies Cognitive Poetics and Conceptual Metaphor Theory in conjunction with more familiar models derived from Literary Analysis Stylistics and Historical Linguistics allows several new ways of thinking about Old English literature to emerge It permits a systematic means of examining and accounting for the conceptual structures that underpin Anglo Saxon poetics as well as fuller explorations at the level of mental processing of the workings of literary language in context The result is a set of approaches to interpreting Anglo Saxon textuality through detailed studies of the concepts mental schemas and associative logic implied in and triggered by the evocative language and meaning structures of surviving works ANTONINA HARBUS is Professor in the Department of English at Macquarie University Sydney Australia
