The Psychology of the Human-Animal Bond Christopher Blazina, Güler Boyraz, David Shen-Miller, 2011-06-22 There have been dramatic increases in the financial emotional and psychological investment in pets over the past four decades The increasing importance of animal companions in people's lives has resulted in growing emphasis on the human animal bond within academic literature This book introduces practicing and emerging professionals to vital subject matter concerning this

growing specialty area by providing an essential framework and information through which to consider the unique contextual backdrop of the human animal bond. Such contexts include a wide array of themes including issues of attachment and loss, success and frustration with making and sustaining connections, world views regarding animal ethics, familial history of neglect or abuse, and cultural dynamics that speak to the order of things between mankind and nature. Adopting a contextual stance will aid mental health professionals in appreciating why and how this connection has become a significant part of everyday life for many. As with any other important clinical dynamic, training and preparation are needed to gain competence for professional practice and research. To this end, an ensemble of international experts across the fields of psychology and mental health explore topics that will help both new and established clinicians increase their understanding of the various ways the human animal bond manifests itself. Perspectives from beyond the scope of psychology and mental health, such as anthropology, philosophy, literature, religion, and history, are included to provide a sampling of the significant contexts in which the human animal bond is established. What brings these divergent topics together in a meaningful way is their relevance and centrality to the contextual bonds that underlie the human animal connection. This text will be a valuable resource that provides opportunities to deepen one's expertise in understanding the psychology of the human animal bond.

Psychological Assessment and Testing John Spores, 2022-06-08 Expanding upon and updating the first edition, this comprehensive guide instructs readers on how to effectively conduct psychological assessment and testing in their practice, efficiently advancing a case from the initial referral and clinical interview through the testing process and leading to informed diagnosis and treatment recommendations. This second edition incorporates updated editions of all major tests, pertinent revisions from the DSM 5, more in-depth analysis of testing topics, and coverage of new constructs that are the targets of psychological testing relevant to outpatient mental health practice. Readers will learn about the fundamentals of assessment, testing, and psychological measurement; the complete process of psychological testing using a broad range of major tests; supplemented by interpretive flowcharts and case examples. Downloadable practice and report forms, along with data tables with pre-drafted interpretive excerpts for all tests, are also available for immediate use in clinical practice. Psychologists in both practice and training will come away with the tools and knowledge needed to successfully conduct psychological assessment and testing within the contemporary mental health field. *Personality Assessment in Depth* Marshall L. Silverstein, 2013-01-17 Comprised of five unique and extended case studies, *Personality Assessment in Depth* examines contemporary clinical problems that are familiar to clinicians but have not been explored extensively in the personality assessment field. Each case study demonstrates the test protocols of the Rorschach test, Thematic Apperception Test, MMPI, or MCMI, and Human Figure Drawings. Important clinical questions and areas of theoretical concern are examined, including differential diagnosis of disorders of affect and personality in light of contemporary viewpoints about these disturbances, personality and adaptation accompanying neuropsychological deficit, and stages of development, including

differentiating these from personality characteristics viewed longitudinally the latter demonstrated by a noteworthy comparison of two evaluations of the same patient first as a 15 year old adolescent and then as a 25 year old adult A battery of performance and self report personality instruments are applied to the cases allowing the author to integrate findings across multiple tests and thereby expose clinical psychology students to personality assessment in a broad perspective Cases are discussed comprehensively relying on a thorough consideration of thematic content examined alongside formal test scores Further the Rorschach findings are examined using both the Exner Comprehensive System and the recently introduced Rorschach Performance Assessment System approaches The cases are considered using a broad psychodynamic framework for interpretation employing classical ego psychology object relations and self psychological theoretical perspectives This is an essential casebook for professionals and students demonstrating the depth and richness of personality considered alongside the empirical foundations of personality assessment

Coping With Loss Susan Nolen-Hoeksema,Judith Larson,Judith M. Larson,2013-01-11 Coping With Loss describes the many ways in which people cope with the death of someone they love Most earlier books on bereavement have fallen into two categories distillations of the clinical experience of individual therapists or collections of chapters reporting the results of empirical studies Each category is valuable but has tended to serve a narrow group of readers practitioners with particular theoretical orientations or researchers in quest of the latest findings Coauthored by a leading research psychologist and an experienced therapist who specializes in bereavement education and intervention this book is different The authors weave together the strands of

theory research and clinical wisdom into a seamless and readable narrative While they discuss previous work they also present new data never before published from one of the largest studies of bereaved people ever conducted the Bereavement Coping Project Unlike most studies to date which focused on only one type of bereaved group usually widows or widowers the Bereavement Coping Project examined the experiences of several different groups during the first 18 months after the death The groups included those who had lost a spouse a parent an adult sibling or a child and those who had lost their significant other to cancer or cardiovascular disease on one hand as opposed to the stigmatized disease of AIDS on the other The book begins with a critical overview of theories of bereavement succeeding chapters explore in depth the impact of specific types of loss the impact of particular coping strategies on recovery the impact of social supports and religion and the special cases of children and of people who seem to grow and change for the better after a loss A final chapter considers implications for intervention with bereaved people Each chapter is richly illuminated with real life examples throughout and ends with a section called Voices in which bereaved people describe their various attempts to cope in their own words

Psychological Assessment of Abused and Traumatized Children Francis D. Kelly, 1999-03-01 The past decade has seen more and more clinicians involved in the assessment and treatment of abused and traumatized children They have contributed to an impressively large body of literature on the impact of abuse and trauma at all ages the focus of which has been the short and long term sequelae apparent in the child's behavior emotional experience and social interaction But there have been few efforts to investigate the ways in which abuse and trauma damage the intrapsychic systems and structures that often guide direct and inform the child's manifest adjustment and functioning The need to redress the balance was the major impetus for this book Kelly offers a clinical paradigm for the personality assessment of abused or traumatized children via projective instruments the TAT and Rorschach and shows how various projective measures and indices can be utilized as sensitive barometers of changes in self object and ego functioning following therapeutic interventions and other corrective

experiences But further integrating the tenets of trauma theory and those of psychoanalytic theory he sets this clinical paradigm in a meaningful theoretical context and draws on both theory and clinical experience to develop a comprehensive psychological composite of the child who has been maltreated Part I provides an overview of theoretical models relevant to the assessment and diagnosis of the maltreated child Contemporary psychoanalytic theory serves as one frame and is discussed first with particular emphasis on object relations and ego functions Equal attention is devoted to developmental psychology as another frame Part II reviews relevant research The Mutuality of Autonomy Scale MOA and the Social Cognition and Object Relations Scale SCORS are introduced as examples of reliable and valid instruments readily employed to assess the impact of abuse or trauma on a child's object relations functioning Additional Rorschach indices boundary disturbance measures thought disorder indices trauma markers and defensive functions measures are discussed as measures of the impact on different facets of ego functioning These various projective measures can be utilized as sensitive barometers of changes in self object and ego functioning following therapeutic interventions and other corrective experiences Part III includes a variety of extended clinical illustrations Seven cases of boys and girls subjected to varying degrees of abuse and trauma are presented to demonstrate the clinical utility of projective material for assessment diagnosis and treatment planning For the clinician who takes the idiographical phenomenological approach appropriate given the uniqueness of each situation of abuse or trauma and the frequent brevity and barrenness of the protocol such material can open a window onto a rich vista of the child's psychological terrain The resulting map can point the way to wise decisions about type timing and level of therapeutic intervention the resolution of such process issues as transference and countertransference plus additional questions Two cases of adult women who were abused as children and find themselves continuing to struggle with enduring unresolved issues vis a vis their own children are also presented These cases underscore the value of TAT and Rorschach material and object relations measures in assessing and understanding the abusive and potentially abusive parent
