Advances in Psychology and Aging P. Costa, I.C. Siegler, 2003-12-10 Recent Events in the Psychology of Aging documents the successful integration of aging into the mainstream of psychology. Leading psychologists present overviews of the key issues and research findings on mainstream topics. These include cognitive neuroscience, visual attention, learning, memory, and cognition, as well as personality and happiness. The intersection of aging content with mainstream psychology is also prominent in the areas of emotions, personality, and social psychology, as seen in the chapters on subjective well-being, emotional development, self-esteem, and personality trajectories. The seven chapters of this book offer information on such topics as the seven sins of memory, categorizing the common breakdowns of memory in everyday life, and the special breakdown of sins that increase with aging, problems with attention and learning, and offers answers to questions such as do emotions get blunted with age, do older people focus more on positive feelings, and the age-old question of whether older people are happier than younger people is given in the chapter on the evolving concept of subjective well-being and the multifaceted nature of happiness. Questions about what occurs to one's self-esteem and personality are also masterfully discussed, and the answers may be surprising. The concluding seventh chapter provides a cultural lens on the biopsychosocial study of aging.

Cross-Cultural Analysis Michael Minkov, 2012-06-05 Cross Cultural Analysis is the sequel to Culture's Consequences, the classic work published by Geert Hofstede, one of the most influential management thinkers in today's times. Hofstede's original work introduced a new research paradigm in cross-cultural analysis, studying cultural differences through nation-level dimensions, complex variables defined by intercorrelated items. This paradigm has been subsequently used by hundreds of prominent scholars all over the world and has produced solid results. This new text takes the next step. It critically examines in one comprehensive volume the current prevalent approaches to cross-cultural analysis at the level of nations that have been developed since Hofstede's work, offering students and researchers the theoretical and practical advantages and potential pitfalls of each method. The book is structured into four distinct parts. Parts I and II focus

on the main theoretical and statistical issues in cross cultural analysis using Hofstede s approach and the different research methods now associated with it Part II consists of presentations of all well known and some lesser known large scale cross cultural studies since Hofstede s work that have explained cross cultural variation in terms of dimensional models Part III summarizes the main conclusions to be drawn from the presentations in Part II and I explains how the proposed models have contributed to our practical understanding of cross cultural diversity *Personality and Intelligence* Robert J. Sternberg, Patricia Ruzgis, 1994-04-29 A 1994 collection of essays which explore the work now being done at the interface of intelligence and personality
