Survey of Audiology David A. DeBonis, Constance L. Donohue, 2004. This text is written in an easy to read style with excellent examples given to reinforce the concepts. Miriam A. Heno, University of Texas. This new text *Survey of Audiology: Fundamentals for Audiologists and Health Professionals* emphasizes the technical and scientific aspects of the practice of audiology blended with other essential humanistic skills: active listening, empathy, client family centered protocols and collaboration with family members and other professionals. Full of illustrative examples, this book is written to be a resource for students in audiology and speech language pathology long after the course is completed. Written by two audiologists with more than 20 years of combined teaching experience, information in the text is presented in very clear, understandable language and is organized based on first hand knowledge of formats that will be most useful to students. Features: Case examples throughout provide practical applications of concepts and practice in interpreting audiological test results and an introduction to case management. Chapter on screening incorporates relevant ASHA and ANSI standards and addresses audiological screenings for clients of all ages including statistical information relevant to providing screenings. Ch 11: Extensive chapter on helping individuals with hearing loss provides a generous overview of rehabilitative audiology from selection of hearing aids and assistive devices to the services that are needed to ensure effective use, amplification or other technology. Ch 12: Focus questions at the beginning of each chapter preset students for learning. Summary tables throughout the chapters help both student and teacher organize the information. Audiology services Great Britain: Parliament: House of Commons: Health Committee, 2007-05-16. One in seven people in England suffer from hearing loss of some kind and the advent of digital hearing aids proved of great benefit to many patients. The Modernising Hearing Aid Services (MHAS) programme to improve audiology services introduced in 2000 aimed to provide NHS patients with digital hearing aids. But the demand from people upgrading from older models was not predicted and this led to very long waiting lists and times. The Committee regards the Government's new framework for audiology, *Improving access to audiology services in England* (Dept of Health, March 2007) <http://www.18weeks.nhs.uk/public/default.aspx?main=true&load=ArticleViewer&ArticleId=570> as primarily reiterating previous announcements. A main concern is that audiology is kept outside the 18 week referral to treatment target that applies to

consultant led services which compounds the waiting time problem There is a need to increase capacity and the Department of Health should undertake an examination of the medium and long term demand for digital hearing aids The Committee notes the variation in practice in NHS audiology departments and believes many could operate more efficiently They should examine the skill mix and levels of training or experience necessary and look at more flexible approaches to service provision The report also comments on the involvement of the private sector to provide additional capacity and the entry into the market of others such as opticians The private services need to be monitored and the quality of care assessed on the same basis as that used for the NHS
