Melesse, 2011-03-28 This book presents results of scientific studies ranging from hydrological modelling to water management and policy issues in the Nile River basin It examines the physical hydrometeorological and hydrogeological description of the basin along with analysis in understanding the hydrological processes of the basin under the changing land use stemming from population pressure and increased natural resources tapping The book discusses the increased impact of climate change on the river flows and such issues as water availability and demand management and policy to offset the imbalance between demand and available resources This book will be of interest to researchers practitioners water resources managers policy makers as well as graduate and undergraduate students It is a useful reference text for ecohydrology arid zone hydrology hydrology of transboundary rivers and similar courses *Alluvial Archaeology in Europe* Andrew J. Howard, M.G. Macklin, D.G. Passmore, 2003-01-01 This book documents and assesses over ten years of research in the field bringing together expertise and knowledge from the disciplines of archaeology and geomorphology and highlighting important recent advances discoveries and new directions Reflecting the wide scope of current research in this area the book contains over twenty papers focusing on various aspects of alluvial archaeology from the methodology of dating prospecting excavating etc to previously under analysed geographical areas such as intertidal wetlands **Climate Variability and Change** Flow Regimes from International Experimental and Network Data (Project), 2006 This volume contains 117 reviewed papers from over 30 countries published in English French and Spanish which reflect both international dimension of

FRIEND and the key challenges facing hydrologists in the 21st century Encyclopedia of Geomorphology Andrew Goudie, 2013-04-15 Volume editor is the leading authority in the field Alphabetically organized in two volumes c 700 comprehensively signed cross referenced and indexed entries Detailed bibliographies and suggestions for further reading follow most entries Fully illustrated over 300 plates and line drawings Written by an editorial team of over 270 experts from over thirty countries **Special External Effects on Fluvial System Evolution** Jef Vandenberghe, David R.

Bridgland, Xianyan Wang, 2019-12-18 Rivers are an excellent witness of the dynamics affecting Earth's surface due to their sedimentary products and morphological expression which may be considered as fluvial archives Until now the focus has been on evaluating the general impact of individual external factors However the importance of the specific environmental characteristics of these factors has become increasingly recognized as highlighted in recent case studies For example the effects of regional climate differentiated topography and vegetation and frozen ground appear to play an essential role in the evolution of the fluvial system Integration of such environmental conditions in the processes that were active within the complex fluvial system will open new perspectives in our progressive understanding of the evolution of landscape form ecology sediment fluxes and hydrology of the system within the framework of the external drivers such as tectonics general climate and human activity This is an appealing challenge that we wish to address in the present Special Issue under the aegis of the Fluvial Archives Group FLAG The Black Sea Flood Question: Changes in Coastline, Climate and Human Settlement Valentina Yanko-Hombach, Allan S. Gilbert, Nicolae Panin, Pavel M. Dolukhanov, 2006-11-15 Stimulated by Noah's Flood Hypothesis proposed by W Ryan and W Pitman in which a catastrophic inundation of the Pontic basin was linked to the biblical story leading experts in Black Sea research including oceanography marine geology paleoclimate paleoenvironment archaeology and linguistic spread provide overviews of their data and interpretations obtained through empirical scientific approaches Among the contributors are many East European scientists whose work has rarely been published outside of Cyrillic Each of the 35 papers marshals its own evidence for or against the flood hypothesis No summary or overall resolution to the flood question is presented but instead access is provided to a broad range of interdisciplinary information that crosses previously impenetrable language barriers so that new work in the region can proceed with the benefit of a wider frame of reference The three fundamental scenarios describing the late glacial to Holocene rise in the level of the Black Sea catastrophic gradual and oscillating are presented in the early pages with the succeeding papers organized by geographic sector northern Ukraine western Moldova Romania and Bulgaria southern Turkey and eastern Georgia and Russia as well as three papers on the Mediterranean The volume thus brings together eastern and western scholarship to share research findings and perspectives on a controversial subject In addition appendices are included containing some 600 radiocarbon dates from the Pontic region obtained by USSR and western laboratories **River Restoration** Stephen Darby, David Sear, 2008-02-28 River restoration projects are designed to recreate functional characteristics within a context of physical

stability They tend to focus on the development and application of geomorphic principles for river restoration design Due to different models obtaining different results on the same problem incomplete or absent data and climatic social cultural changes the designers and managers of such projects frequently face high levels of uncertainty This book will provide a systematic overview of the issues involved in minimizing and coping with uncertainty in river restoration projects A series of thematic sections will be used to define the various sources of uncertainty in restoration projects and how these show at different points in the life cycle design construction and post construction phases of restoration projects The structure of the book will offer a rational theoretical analysis of the problem while providing practical guidance in managing the different sources of uncertainty A wide range of case studies will be included from Europe North America and Australasia

The Nile: Natural and Cultural Landscape in Egypt Harco Willems, Jan-Michael Dahms, 2017-03-15 Although Herodotus dictum that Egypt is a gift of the Nile is proverbial there has been only scant attention to the way the river impacted on ancient Egyptian society Egyptologists frequently focus on the textual and iconographic record whereas archaeologists and earth scientists approach the issue from the perspective of natural sciences The contributions in this volume bridge this gap by analyzing the river both as a natural and as a cultural phenomenon Adopting an approach of cultural ecology it addresses issues like ancient land use administration and taxation irrigation and religious concepts

Climate Change in Deserts Martin Williams, 2014-08-11 Reconstructing climatic changes in deserts and their margins at a variety of scales in space and time this book draws upon evidence from land and sea including desert dunes wind blown dust river and lake sediments glacial moraines plant and animal fossils isotope geochemistry speleothems soils and prehistoric archaeology The book summarises the Cenozoic evolution of the major deserts of the Americas Eurasia Africa and Australia and the causes of historic floods and droughts The book then considers the causes and consequences of desertification and proposes four key conditions for achieving ecologically sustainable use of natural resources in arid and semi arid areas Climate Change in Deserts is an invaluable reference for researchers and advanced students interested in the climate and geomorphology of deserts geographers geologists ecologists archaeologists soil scientists hydrologists climatologists and natural resource managers
