

An abstract painting in shades of teal, green, and yellow, depicting a winding river and its surrounding floodplains. The texture is thick and expressive, with visible brushstrokes. The river flows from the top right towards the bottom left, with several meanders and oxbow-like shapes. The floodplains are represented by the surrounding textured areas.

**Rivers and Floodplains** John S. Bridge, 2009-04-01 Rivers and Floodplains is concerned with the origin geometry water flow sediment transport erosion and deposition associated with modern alluvial rivers and floodplains how they vary in time and space and how this information is used to interpret deposits of ancient rivers and floodplains There is specific reference to the types and lifestyles of organisms associated with fluvial environments human interactions with rivers and floodplains associated environmental and engineering concerns as well as the economic aspects of fluvial deposits particularly the modeling of fluvial hydrocarbon reservoirs and aquifers Methods of studying rivers and floodplains and their deposits are also discussed Although basic principles are emphasized many examples are detailed Particular emphasis is placed on how an understanding of the nature of modern rivers and floodplains is required before any problems concerning rivers and floodplains past or present can be addressed rationally Rivers and Floodplains is designed as a core text for senior undergraduate and graduate students studying modern or ancient fluvial environments particularly in earth sciences environmental sciences and physical geography but also in civil and agricultural engineering College teachers researchers and practising professionals will also find the book an invaluable reference Presents a process based approach which is relevant to modern curricula Discusses methods of studying rivers and floodplains and their deposits Provides many detailed examples throughout the text Emphasises the basic principles of this subject As the first synthesis of this entire field it will be a must have for all students studying modern or ancient fluvial environments Teachers researchers and practising professionals will find this an invaluable reference tool Rivers and Floodplains will also be of interest to geologists geographers and engineers

*The Fly River, Papua New Guinea* Barrie R. Bolton, 2009-01-09 In 1984 the OK Tedi Mining Company Limited began mining copper and gold mineralization from Mt Fubilan which is located at the headwaters of the OK Tedi Subsequent mining in the region followed in 1990 Since this time there has been intense monitoring of the environment undertaken by those in the field in order to better understand the possible impact of mining This book assembles and summarizes research spanning two decades undertaken by leading experts with firsthand experience Much of this research is contained in internal company reports giving the reader rare

insight and firsthand knowledge Documents physical and biologic change in a large tropical river system brought about largely by mining in an otherwise pristine environment This book brings together a broad range of disciplines to provide a comprehensive overview of change in a complex and dynamical tropical river system based largely on previously unpublished company reports The book provides examples of state of the art strategies and methodologies for monitoring environmental impact in a large river system

**Landforms** Britannica Educational Publishing, 2011-05-01 The planet's natural dips and elevations slopes and structures stud the world's landscapes and enrich its panoramas However the Earth's landforms should not be viewed as anomalies in its topography rather they are often invaluable components of ecosystems and hold significant clues to the natural forces that fashion our environment This comprehensive volume examines the various landforms from mountains to caves to glaciers that can be found across the globe The processes that shape each formation are also detailed within these pages

A Systems Approach for River and River Basin Restoration Theodore Endreny, 2021-05-27 Communities increasingly find that the water quality water levels or some other resource indicator in their river basins do not meet their expectations This discrepancy between the desired and actual state of the resource leads to efforts in river basin restoration River basins are complex systems and too often restoration efforts are ineffective due to a lack of understanding of the purpose of the system defined by the system structure and function The river basin structure includes stocks e.g. water level or quality inflows e.g. precipitation or fertilization outflows e.g. evaporation or runoff and positive and negative feedback loops with delays in responsiveness all of which function to change or stabilize the state of the system e.g. the stock of interest such as water level or quality External drivers on this structure together with goals and rules contribute to how a river basin functions This book reviews several new research projects to identify and rank the twelve most effective leverage points to address discrepancies between the desired and actual state of the river basin system This book demonstrates that river basin restoration is most likely to succeed when we change paradigms rather than try to change the system elements as the paradigm will establish the system goals structure rules delays and parameters

*Polity and Ecology in Formative Period Coastal Oaxaca* Arthur A. Joyce, 2013-02-15 Encapsulating two decades of research *Polity and Ecology in Formative Period Coastal Oaxaca* is the first major treatment of the lower Rio Verde region of Oaxaca investigating its social political and ecological history Tracing Formative period developments from the earliest known evidence of human presence to the collapse of Rio Viejo the region's first centralized polity the volume synthesizes the archaeological and paleoecological evidence from the valley This period saw the earliest agricultural settlements in the region as well as the origins of sedentism and social complexity and witnessed major changes in floodplain and coastal environments that expanded the productivity of subsistence resources The book addresses theoretically significant questions of broad relevance such as the origins and spread of agriculture the social negotiation of complex political formations the effects of long distance trade and interaction the macroregional effects of landscape change and prehispanic ideology and

The Boatman Robert M. Thorson, 2017-04-24 Robert Thorson gives readers a Thoreau for the Anthropocene The boatman and backyard naturalist was keenly aware of the way humans had altered the waterways and meadows of his beloved Concord River Valley Yet he sought out for solace and pleasure those river sites most dramatically altered by human invention and intervention for better and worse

**Fluvial-Tidal Sedimentology**, 2015-11-26 Fluvial Tidal Sedimentology provides information on the Tidal Fluvial Transition the transition zone between river and tidal environments and includes contributions that address some of the most fundamental research questions including how the morphology of the tidal fluvial transition zone evolves over short days and long decadal time periods and for different tidal and fluvial regimes the structure of the river flow as it varies in its magnitude over tidal currents and how this changes at the mixing interface between fresh and saline water and at the turbidity maximum the role of suspended sediment in controlling bathymetric change and bar growth and the role of fine grained sediment muds and flocs whether it is possible to differentiate between fluvial and tidally influenced bedforms as preserved in bars and within the adjacent floodplain and what are the diagnostic sedimentary facies of tidal fluvial deposits and how are these different from pure fluvial and tidal deposits amongst other topics The book presents the latest research on the processes and deposits of the tidal fluvial transition documenting recent major field programs that have quantified the flow sediment transport and bed morphology in tidal fluvial zones It uses description of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal fluvial transition Presents the latest outcomes
