Transforming Growth Factor-Beta in Cancer Therapy, Volume I Sonia B. Jakowlew, 2010-01-01. Transforming Growth Factor  $\beta$  in Cancer Therapy Volume I: Basic and Clinical Biology. The present volume brings together a wealth of information that is fundamental to understanding the role of TGF in the pathogenesis, prevention and treatment of cancer. It is not even 25 years since TGF was first isolated and characterized as a dimeric peptide from both human and bovine sources [1, 3] but the entire field of TGF research has grown and expanded so that it is now a central theme in all of cell biology. There is almost no tissue or organ in the mammalian body in which TGF does not play a central role in embryonic differentiation or in adult function and furthermore malfunction of the normal physiology of TGF can have disastrous consequences in almost all of these sites. Therefore the present comprehensive review of so many aspects of TGF function is a most welcome attempt to bring together a huge body of experimental data that is of the utmost importance in the field of oncology. *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1983.

**Non-canonical Cyclic Nucleotides** Roland Seifert, 2017-04-28. The cyclic purine nucleotides 3',5'-cAMP and 3',5'-cGMP are well established second messengers. cGMP has recently been covered in a volume of the *Handbook of Experimental Pharmacology* volume 191. In addition to 3',5'-cAMP and 3',5'-cGMP so called non canonical cyclic nucleotides exist. These comprise the cyclic pyrimidine nucleotides 3',5'-cCMP and 3',5'-cUMP, the purine nucleotide 3',5'-cIMP, the 2',3'-nucleoside monophosphates and cyclic dinucleotides. In this volume of the *Handbook of Pharmacology* world leading experts in the field summarize our current knowledge on these non canonical cyclic nucleotides, discuss open questions, future research directions and the pharmacotherapeutic implications. Special emphasis will be given to the emerging roles of 3',5'-cCMP and 3',5'-cUMP as second messengers with regard to generators, effectors, biological functions, inactivation and bacterial toxins. The role of 3',5'-cIMP as potential second messenger will also be critically discussed. Furthermore we will consider transport of cyclic nucleotides and their potential role as first messengers. The role of the cyclic dinucleotide cGAMP in the immune system will be covered too. Lastly the book will present important methodological aspects ranging from mass spectrometric methods for cyclic nucleotide detection to the synthesis of nucleotide analogs as experimental tools and holistic methods for analysis of cyclic nucleotide effects. **Current**

**Antipsychotics** Gerhard Gross, Mark A. Geyer, 2012-11-05 Six decades after the serendipitous discovery of chlorpromazine as an antipsychotic and four decades after the launch of clozapine the first atypical or second generation antipsychotic psychopharmacology has arrived at an important crossroad It is clear that pharmacological research and pharmaceutical development must now focus on complementary or even alternative mechanisms of action to address unmet medical needs in poorly treated domains of schizophrenia improved acceptance by patients better adherence to medication safety in psychoses in demented patients and avoiding cardiac and metabolic adverse effects The first completely novel mechanisms evolving from our insights into the pathophysiology of psychotic disorders especially the role of glutamatergic mechanisms in schizophrenia are now under development and further principles are on the horizon This situation in many respects similar to that when the initial second generation antipsychotics became available can be rewarding for all Preclinical and clinical researchers now have the opportunity to confirm their hypotheses and the pharmaceutical industry may be able to develop really novel classes of therapeutics When we were approached by the publishers of the Handbook of Experimental Pharmacology to prepare a new volume on antipsychotics our intention was to capture both the accumulated preclinical and clinical knowledge about current antipsychotics as well as prospects for new and potentially more specific antischizophrenia principles These efforts should be based on the pathophysiology of the diseases and the affected neurotransmitter systems Since preclinical research on antipsychotic compounds is only reliable when intimately linked through translational aspects to clinical results we decided to include clinical science as well It turned out that that this endeavor could not be covered by a single volume We thank the editorial board and the publishers for supporting our decision to prepare two volumes Current Antipsychotics and Novel Antischizophrenia Treatments These topics cannot really be separated from one another and should be seen as a composite entity despite the somewhat arbitrary separation of contributions into two volumes The continuing challenges of developing improved and safer antipsychotic medications remain of concern and are discussed in the first volume The new opportunities for the field to develop and license adjunctive treatments for the negative symptoms and cognitive deficits that are treated inadequately by existing compounds have been incentivized recently and provide the focus for the second volume We hope these collective contributions will facilitate the development of improved treatments for the full range of symptomatology seen in the group of schizophrenias and other major psychotic disorders Gerhard Gross Ludwigshafen Germany Mark A Geyer La Jolla CA This volume will try to put current therapy achievements shortcomings remaining medical needs and emerging new targets into the context of increasing knowledge regarding the genetic and neurodevelopmental contributions to the pathophysiology of schizophrenia Some of the chapters will also deal with respective experimental and clinical methodology biomarkers and translational aspects of drug development Non schizophrenia indications will be covered to some extent but not exhaustively AIDS Bibliography ,1990
