A Research Guide to Cartographic Resources Eva H. Dodsworth, 2018-09-22 The interdisciplinary uses of traditional cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields. A Research Guide to Cartographic Resources navigates the numerous American and Canadian cartographic resources available in print and online, offering researchers, academics, and students with information on how to locate and access the large variety of resources, new and old. Dozens of different cartographic materials are highlighted and summarized along with lists of map libraries and geospatial centers and related professional associations. A Research Guide to Cartographic Resources consists of 18 chapters, two appendices, and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides, including cartographic categories such as atlases, dictionaries, gazetteers, handbooks, maps, plans, GIS data, and other related material. Almost all of the resources listed in this guide are categorized by geography down to the county level, making efficient work of the type of material required to meet the information needs of those interested in researching place-specific cartographic related resources. Additionally, this guide will help those interested in not only developing a comprehensive collection in these subject areas but get an understanding of what materials are being collected and housed in specific map libraries, geospatial centers, and their related websites. Of particular value are the sections that offer directories of cartographic and GIS libraries as well as comprehensive lists of geospatial datasets down to the county level. This volume combines the traditional and historical collections of cartography with the modern applications of GIS-based maps and geospatial datasets.

Entomologist, Ephraim Porter Felt, 1909 **The Long and Winding Road** Jim Couper, 2006 Highway 97 winds its way from the high desert plains of northern California to the Yukon British Columbia border making it North America's longest north-south road. Author Jim Couper takes you on a spectacular guided tour from one end of this unsung highway to the other, mixing historical anecdotes with information on colourful local events and must-see points of interest. From hot springs to volcanoes, dynamic cities to ghost towns, Highway 97 holds surprises and charms at every turn. Take in the lava beds and deserts, arid uplands and giant cedars and orchards and vineyards of Oregon and Washington. Above the border, cruise through BC's sunny Okanagan, famous for its roadside fruit and vegetable stands and 60 outstanding wineries. Marvel at pristine lakes, mighty rivers and marble canyons in Cariboo ranch country, where gold rush lore and friendly people make it a land for all seasons. End your tour in the northern wilderness where untamed nature still holds sway. This entertaining practical guide is invaluable to anyone interested in travelling all or part of this fascinating road.

The History of Cartography, Volume 6 Mark Monmonier, 2015-05-18 For more than thirty years the History of Cartography Project has charted the course for scholarship on cartography, bringing together research from a variety of disciplines on the creation, dissemination and use of maps. Volume 6, *Cartography in the Twentieth Century*, continues this tradition with a groundbreaking survey of the century just ended and a new full-color encyclopedic format. The twentieth century is a pivotal period in map history. The transition from paper to digital formats led to previously unimaginable dynamic and interactive maps. Geographic information systems radically altered cartographic institutions and reduced the skill required to create maps. Satellite positioning and mobile communications revolutionized wayfinding. Mapping evolved as an important tool for coping with complexity, organizing knowledge and influencing public opinion in all parts of the globe and at all levels of society. Volume 6 covers these changes comprehensively while thoroughly demonstrating the far-reaching effects of maps on science, technology and society, and vice versa. The lavishly produced volume includes more than five hundred articles, accompanied by more than a thousand images. Hundreds of expert contributors provide both original research, often based on their own participation in the developments they describe, and interpretations of larger trends in cartography. Designed for use by both scholars and the general public, this definitive volume is a reference work of first resort for all who study and love maps.
