Scaling Up Scaling Down Overcoming Malnutrition In Developing Countries:

Scaling Up, Scaling Down Thomas J. Marchione, 1999 The essays in this book champion the idea of increasing or scaling up grass roots operations to provide nutritional security while scaling down the efforts of national and international institutions

Scaling Up Scaling Down Thomas J. Marchione, 2013-12-19 The individual and institutional capacities required for the prevention and reduction of nutritional insecurity and hunger in lesser developed countries as the twenty first century approaches are identified in this book Household nutritional security can be defined as the successful The essays in this book champion the idea of increasing or scaling up grass roots operations to provide nutritional security while scaling down the efforts of national and international institutions Scaling up involves strengthening local capacities to improve and expand upon current successful programs by building upon existing local culture and organizations This in turn enables the programs to strengthen relationships with national governments international bilateral multilateral donors as well as non governmental organizations Scaling down concerns the ways and means by which these various organizations encourage and complement the local development Therefore as local capacities are scaled up the national international control over decisions and functions is ideally scaled down The volume also directly addresses the resultant complication how to create programs that are both culturally specific and that will flourish well into the future

Scaling Up Health Service Delivery Ruth Simmons, Peter Fajans, Laura Ghiron, 2007 The focus here is on ways to increase impact of health service innovations that have been tested in pilot or experimental projects so as to benefit more people and to foster policy and programme development on a lasting sustainable basis p i Preface

Nourishing millions Gillespie, Stuart, Hodge, Judith, Yosef, Sivan, Pandya-Lorch, Rajul, 2016-06-29 The stories in this book are diverse spanning five decades and playing out in different arenas from local to global They take place in developing countries all over the world and they involve many sectors and disciplines beyond nutrition itself including health agriculture education social protection and water and sanitation Most importantly they paint a nuanced picture of success as a context specific achievement that may or may not endure into the future

Food Security and Nutrition Uwe Kracht, Manfred Schulz, 1999 The persistence of an unacceptably high level of hunger and malnutrition worldwide presents a serious challenge to the world on the threshold of the third millennium Although enough food is produced to feed mankind about 840 million people go hungry among them are 185 million pre school children that are severely underweight for their age Since an additional 80 million people have to be fed each year achieving food security is a central global challenge if not the most important development issue The aim of the reader is to analyze actual problems in the field of food security and nutrition and to discuss present and future strategies to overcome hunger Food security is a complex subject In order to master this complexity we distinguish between four dimensions of analyses Theoretical analytical empirical descriptive normative political institutional Series Spektrum Berliner Reihe zu Gesellschaft Wirtschaft und Politik in Entwicklungslandern Berlin Series on Society Economy and Politics in

the impact of micro level interventions that have traditionally been so widely embraced and are now under increased scrutiny It is in this context that this book provides practical advice on programs that can effectively target those at greatest risk of malnutrition and guidance on policies to promote a healthy and sustainable food and agricultural system Overlaying all of these challenges is the book's emphasis on both identifying data and information needs for decision making and practical considerations for better understanding the domestic and international political and social constraints that need to be addressed when trying to translate scientific knowledge and information into practice *Food Policy for Developing Countries* Per Pinstrup-Andersen, Derrill D. The Power of Positive Deviance Richard Pascale, Jerry Sternin, Monique Sternin, 2010-06-16. Think of the toughest problems in your organization or community. What if they'd already been solved and you didn't even know it? In *The Power of Positive Deviance*, the authors present a counterintuitive new approach to problem solving. Their advice: Leverage positive deviants—the few individuals in a group who find unique ways to look at and overcome seemingly insoluble difficulties. By seeing solutions where others don't, positive deviants spread and sustain needed change. With vivid firsthand stories of how positive deviance has alleviated some of the world's toughest problems (malnutrition in Vietnam, staph infections in hospitals), the authors illuminate its core practices, including mobilizing communities to discover invisible solutions in their midst. Using innovative designs to act your way into a new way of thinking instead of thinking your way into a new way of acting, confounding the organizational immune response seeking to sustain the status quo, inspiring and insightful, *The Power of Positive Deviance* unveils a potent new way to tackle the thorniest challenges in your own company and community.

On an Empty Stomach Tom Scott-Smith, 2020-04-15 On an Empty Stomach examines the practical techniques humanitarians have used to manage and measure starvation from Victorian scientific soup kitchens to space age high protein foods Tracing the evolution of these techniques since the start of the nineteenth century Tom Scott Smith argues that humanitarianism is not a simple story of progress and improvement but rather is profoundly shaped by sociopolitical conditions Aid is often presented as an apolitical and technical project but the way humanitarians conceive and tackle human needs has always been deeply influenced by culture politics and society These influences extend down to the most detailed mechanisms for measuring malnutrition and providing sustenance As Scott Smith shows over the past century the humanitarian approach to hunger has redefined food as nutrients and hunger as a medical condition Aid has become more individualized medicalized and rationalized shaped by modernism in bureaucracy commerce and food technology On an Empty Stomach focuses on the gains and losses that result examining the complex compromises that arise between efficiency of distribution and quality of care Scott Smith concludes that humanitarian groups have developed an approach to the empty stomach that is dependent on compact commercially produced devices and is often paternalistic and culturally insensitive
