Visual information systems are information systems for visual computing Visual computing is computing on visual objects Some visual objects such as images are inherently visual in the sense that their primary representation is the visual representation Some visual objects such as data structures are derivatively visual in the sense that their primary representation is not the visual representation but can be transformed into a visual representation Images and data structures are the two extremes Other visual objects such as maps may fall somewhere in between the two Visual computing often involves the transformation from one type of visual objects into another type of visual objects or into the same type of visual objects to accomplish certain objectives such as information reduction object recognition and so on In visual information systems design it is also important to ask the following question who performs the visual computing The answer to this question determines the approach to visual computing For instance it is possible that primarily the computer performs the visual computing and the human merely observes the results It is also possible that primarily the human performs the visual computing and the computer plays a supporting role Often the human and the computer are both involved as equal partners in visual computing and there are visual interactions Formal or informal visual languages are usually needed to facilitate such visual interactions

The Principles of Judaism Samuel Lebens, 2020-06-29 Samuel Lebens takes the three principles of Jewish faith as proposed by Rabbi Joseph Albo 1380-1444 in order to scrutinize and refine them with the toolkit of contemporary analytic philosophy. What could it mean for a perfect being to create a world from nothing? Could our world be anything more than a figment of God's imagination? What is the Torah? What does Judaism expect from a Messiah, and what would it mean for a world to be redeemed? These questions are explored in conversation with a wide array of Jewish sources and with an eye towards diverse fields of contemporary research such as cosmology, philosophical logic, the ontology of literature, and the metaphysics of time. *The Principles of Judaism* articulates the most fundamental axioms of Orthodox Judaism in the vernacular of contemporary philosophy.

[Handbook of Research Design in Mathematics and Science Education](#) Anthony Edward Kelly, Richard A. Lesh, 2012-10-12 The *Handbook of Research Design in Mathematics and Science Education* is based on results from an NSF supported project REC 9450510 aimed at clarifying the nature of principles that govern the effective use of emerging new research designs in mathematics and science education. A primary goal is to describe several of the most important types of research designs that have been pioneered recently by mathematics and science educators; have distinctive characteristics when they are used in projects that focus on mathematics and science education; and have proven to be especially productive for investigating the kinds of complex interacting and adapting systems that underlie the development of mathematics or science students and teachers or for the development, dissemination, and implementation of innovative programs of mathematics or science instruction. The volume emphasizes research designs that are intended to radically increase the relevance of research to practice, often by involving practitioners in the identification and formulation of the problems to be addressed or in other key roles in the research process. Examples of such research designs include teaching experiments, clinical interviews, analyses of videotapes, action research studies, ethnographic observations, software development studies, or curricula development studies, more generally, and computer modeling studies. This book's second goal is to begin discussions about the nature of appropriate and productive criteria for assessing and increasing the quality of research proposals, projects, or publications that are based on the preceding kind of research designs. A final objective is to describe such guidelines in forms that will be useful to graduate students and others who are novices to the fields of mathematics or science education research. The NSF supported project from which this book developed involved a series of mini-conferences in which leading researchers in mathematics and science education developed detailed specifications for the book and planned and revised chapters to be included. Chapters were also field tested and revised during a series of doctoral research seminars that were sponsored by the University of Wisconsin's OERI supported National Center for Improving Student Learning and Achievement in Mathematics and Science. In these seminars, computer-based videoconferencing and www-based discussion groups were used to create interactions in which authors of potential chapters served as guest discussion leaders responding to questions and comments from doctoral students and faculty members.
