Scheduling Michael L. Pinedo, 2016-02-10 This new edition provides an up to date coverage of important theoretical models in the scheduling literature as well as significant scheduling problems that occur in the real world It again includes supplementary material in the form of slide shows from industry and movies that show implementations of scheduling systems The main structure of the book as per previous edition consists of three parts The first part focuses on deterministic scheduling and the related combinatorial problems The second part covers probabilistic scheduling models in this part it is assumed that processing times and other problem data are random and not known in advance The third part deals with scheduling in practice it covers heuristics that are popular with practitioners and discusses system design and implementation issues All three parts of this new edition have been revamped and streamlined The references have been made completely up to date Theoreticians and practitioners alike will find this book of interest Graduate students in operations management operations research industrial engineering and computer science will find the book an accessible and invaluable resource **Scheduling Theory Algorithms and Systems** will serve as an essential reference for professionals working on scheduling problems in manufacturing services and other environments

Complex Scheduling Peter Brucker, Sigrid Knust, 2006-04-26 Scheduling problems have been investigated since the late fties Two types of applications have mainly motivated research in this area project planning and machine scheduling While in machine scheduling a large number of specific scheduling situations depending on the machine environment and the job characteristics have been considered the early work in project planning investigated scheduling situations with precedence constraints between activities assuming that sufficient resources are available to perform the activities More recently in project scheduling scarce resources have been taken into account leading to so called resource constrained project scheduling problems On the other hand also in machine scheduling more general and complex problems have been investigated Due to these developments today both areas are much closer to each other Furthermore applications like timetabling rostering or industrial scheduling are connected to both areas This book deals with such complex scheduling problems and methods to solve them It consists of three parts The first part Chapters 1 and 2 contains a description of basic scheduling models with applications and an introduction into discrete optimization covering complexity shortest path algorithms linear programming network flow algorithms and general optimization methods In the second part Chapter 3 resource constrained project scheduling problems are considered Especially methods like constraint propagation branch and bound algorithms and heuristic procedures are described Furthermore lower bounds and general objective functions are discussed
