Handbook on Scheduling Jacek Blazewicz, Klaus H. Ecker, Erwin Pesch, Günter Schmidt, Jan Weglarz, 2007-08-10. This handbook is in a sense a continuation of Scheduling Computer and Manufacturing Processes 1, two editions of which have received kind acceptance of a wide readership. As the previous volume it is the result of a long lasting German Polish collaboration. However due to important reasons it has a new form. Namely following the suggestions of the Publisher we decided to prepare a handbook filling out a gap on the market in the area. The gap concerns a unified approach to the most important scheduling models and methods with the special emphasis put on their relevance to practical situations. Thus in comparison with 1 the contents has been changed significantly. This concerns not only corrections we have introduced following the suggestions made by many readers we are very grateful to all of them and taking into account our own experience but first of all this means that important new material has been added. It is characterized in Chapter 1 and generally speaking covers a transition from theory to applications in a wide spectrum of scheduling problems. Independently of this in all chapters new results have been reported and new illustrative material including real world problems has been given. We very much hope that in this way the handbook will be of interest to a much wider readership than the former volume. The fact which has been underlined in the title.
