Physics With Illustrative Examples From Medicine and Biology George B. Benedek, Felix M.H. Villars, 2000-06-26 A reissue of a classic book corrected edited typeset redrawn and indexed for the Biological Physics Series Intended for undergraduate courses in biophysics biological physics physiology medical physics and biomedical engineering this is an introduction to statistical physics with examples and problems from the medical and biological sciences Topics include the elements of the theory of probability Poisson statistics thermal equilibrium entropy and free energy and the second law of thermodynamics It can be used as a supplement to standard introductory physics courses and as a text for medical schools medical physics courses and biology departments The three volumes combined present all the major topics in physics These books are being reissued in response to frequent requests to satisfy the growing need among students and practitioners in the medical and biological sciences with a working knowledge of the physical sciences The books are also in demand in physics departments either as supplements to traditional intro texts or as a main text for those departments offering courses with biological or medical physics orientation *The Publishers' Trade List Annual* ,1975 Federation Proceedings Federation of American Societies for Experimental Biology, 1987 Vols for 1942 include proceedings of the American Physiological Society Current Topics in Cellular Regulation Bernard L. Horecker, Earl R. Stadtman, 2014-06-28 Current Topics in Cellular Regulation Volume 22 is a collection of papers that deals with eukaryotic protein synthesis lysosomal thiol proteinases and the properties of adenylosuccinate synthetase Other papers discuss the regulation of acetyl CoA carboxylase ornithine cycle and seminal vesicle development and function One paper investigates the poly ADP ribosylation of protein particularly in quantifying synthesis and in the function of the polymer Another paper observes the construction of a reconstituted cell free system in which there is for the first time a catalytic use followed by a recycling of eIF 2 A eukaryotic regulatory factor or eukaryotic recycling factor eRF is a prerequisite factor in the in the control of the rate of initiation One paper reviews the properties structures and functions of thiol endopeptidases in mammalian lysosomes and the characteristics of the endogenous inhibitor Another paper explains the regulatory kinetic and genetic aspects of adenylosuccinate synthetase from a variety of systems One paper discusses the short term regulation of the carboxylase from animal tissues with emphasis on the covalent modification of the carboxylase and its relationship to the allosteric control mechanism Molecular biologists general biologists and microbiologists will find the articles in this collection invaluable

Cross, 2014-06-28 Current Topics in Cellular Regulation Volume 24 Enzyme Catalysis and Control is a compendium of papers that discusses phosphoryl transfer reactions the role of water on the free energy of hydrolysis of pyrophosphate and the hormonal actions of vitamin D Other papers describe the regulation lipid metabolism by a lipid carrying protein the GABA and taurine enzymes in

mammalian brain One paper examines the role of vitamin D in the metabolism of cells as well as in the whole animal Upon absorption in the body the vitamin undergoes various metabolic transformations before interacting with specific receptors and then inducing the genome in the target tissues to generate biological and hormonal responses Another paper notes the possibility of a genetic defect in cancer cells that results in the abnormal accumulation of sterol carrier protein SCP and cholesterol in vivo and also in the inability to maintain levels of SCP or cholesterol in vitro One paper shows that tartrate or other organic acids secreted into the medium by the penicillia keeps the pH in an optimal range for acid protease degradation of proteins and glycoproteins This mechanism helps the fungus to survive in a nutrient environment which is unbalanced with respect to an optimum C N ratio and at a pH unfavorable to many bacteria and other life forms Another paper proposes a model for the modulation of ATP synthetase activities and medium exchange reactions by energy input substrate concentration or others that affect the microenvironment of the enzyme under certain conditions The compendium will prove beneficial to molecular biologists general biologists microbiologists and biochemists
