Search for Higgs Boson Decays to Charm Quarks with the ATLAS Experiment and Development of Novel Silicon Pixel Detectors Maria Mironova, 2023-07-20 This book explores the Higgs boson and its interactions with fermions as well as the detector technologies used to measure it The Standard Model of Particle Physics has been a groundbreaking theory in our understanding of the fundamental properties of the universe but it is incomplete and there are significant hints which require new physics The discovery of the Higgs boson in 2012 was a substantial confirmation of the Standard Model but many of its decay modes remain elusive This book presents the latest search for

Higgs boson decays into c quarks using a proton proton collision dataset collected by the ATLAS experiment at the Large Hadron Collider LHC This decay mode has yet to be observed and requires advanced machine learning algorithms to identify c quarks in the experiment The results provide an upper limit on the rate of Higgs boson decays to c quarks and a direct measurement of the Higgs boson coupling strength to c quarks The book also discusses the future of particle physics and the need for significant improvements to the detector to cope with increased radiation damage and higher data rates at the High Luminosity LHC It presents the characterization of the ATLAS pixel detector readout chip for the inner detector upgrade ITk The chip was subjected to irradiations using X rays and protons to simulate the radiation environment at the HL LHC The tests showed that all readout chip components including the digital logic and analogue front end are sufficiently radiation tolerant to withstand the expected radiation dose Finally this book describes monolithic pixel detectors as a possible technology for future pixel detectors This book is ideal for individuals interested in exploring particle physics the Higgs boson and the development of silicon pixel detectors

Top Quark Spin Correlations with the CMS Detector Jason R. Thieman, 2024-12-04 The differential top quark precision measurements of polarizations and spin correlations presented in this dissertation may potentially lead to breakthroughs in several key areas observing quantum entanglement and Bell's Inequality violations in a hadronic system discovering toponium illuminating supersymmetry interpreting field theories beyond the Standard Model and advancing the understanding of electroweak vacuum stability Additionally this thesis provides a significantly improved understanding of CMS detector lepton trigger efficiencies which has greatly enhanced the search for Lorentz invariance violation in top quark events boosting the sensitivity by greater than a factor of 100 Finally the thesis includes TCAD simulations that explore the feasibility of using the initial transient induced current as described by the Ramo Shockley Theorem to achieve the picosecond timing precision in silicon pixel detectors needed for four dimensional tracking
