Joseph, 2013-12-14 R S Rivlin is one of the principal architects of nonlinear continuum mechanics His work on the mechanics of rubber in the 1940s and 50s established the basis of finite elasticity theory These volumes make most of his scientific papers available again and show the full scope and significance of his contributions      SELECTED PAPERS PRESENTED AT THE CONFERENCE- BRITISH SOCIETY OF RHEOLOGY. ,      *Selected Papers of J. M. Burgers* F.T. Nieuwstadt, J.A. Steketee, 2012-12-06 J M Burgers 1895 1981 is regarded as one of the leading scientists in the field of fluid mechanics contributing many important results a number of which still bear his name However the work of this outstanding scientist was mostly published in the Proceedings and Transactions of The Royal Netherlands Academy of Sciences of which he was a distinguished member Nowadays this work is almost impossible to obtain through the usual library channels Therefore the editors have decided to reissue the most important work of J M Burgers which gives the reader access to the original papers which led to important results now known as the Burgers Equation the Burgers Vector and the Burgers Vortex Further the book contains a biography of J M Burgers which provides the reader with both information on his scientific life as well as a rounded impression of the many activities which J M Burgers performed or was involved in outside his science      **Rheology of Solids** , 1995      Selected papers of the "1st International Conference on Nanofluids (ICNf)" Patrice Estellé, Leonor Hernandez, Matthias H. Mechanics And Mathematics Of Crystals: Selected Papers Of J L Ericksen Jerald L Ericksen, 2005-04-13 This book is a unique and comprehensive collection of pioneering contributions to the mechanics of crystals by J L Ericksen, a prominent and leading contributor to the study of the mechanics and mathematics of crystalline solids over the past 35 years. It presents a splendid corpus of research papers that cover areas on crystal symmetry, constitutive equations, defects and phase transitions, all topics of current importance to a broad group of workers in the field. The volume thus provides in one place material that is frequently referenced by numerous researchers on crystals across a spectrum of activities in areas of continuum mechanics, applied mathematics, engineering and materials science. Each group of papers or chapters in the book is preceded by a summary introduction that describes how the papers on that topic fit together and in which Ericksen sketches the context of each paper and shares with the reader his thinking and insightfulness in writing it. The volume, edited by internationally renowned scholars whose works in finite elasticity and continuum mechanics have appeared in a variety of books and prestigious journals published over the past four decades, also includes a very interesting brief autobiography by Ericksen. In it, he describes his early life in Oregon, his wartime experiences, his student days and postgraduate study, his introduction to scientific work and what motivated him in his research. An English translation and revision of the first paper in this volume, originally published in Russian, appears here for the first time. *Index of Conference Proceedings* British Library. Document Supply Centre, 2003 Rheology and Processing of Polymeric Materials Chang Dae Han, 2007-05-16

Volume 1 presents first fundamental principles of the rheology of polymeric fluid, including kinematics and stresses of a deformable body, the continuum theory for the viscoelasticity of flexible homogeneous polymeric liquids, the molecular theory for the viscoelasticity of flexible homogeneous polymeric liquids and the experimental methods for the measurement of the rheological properties of polymeric liquids. The materials presented are intended to set a stage for the subsequent chapters by introducing the basic concepts and principles of rheology from both phenomenological and molecular perspectives of structurally simple flexible and homogeneous polymeric liquids. Next, this volume presents the rheological behavior of structurally complex polymeric materials, including miscible polymer blends, block copolymers, liquid crystalline polymers, thermoplastic polyurethanes, immiscible polymer blends, particulate filled polymers, organoclay nanocomposites, molten polymers with dissolved gas and thermostats. **English Abstracts of Selected Articles from Soviet Bloc and Mainland**
