Selected Writings of T. C. Schneirla Theodore Christian Schneirla, 1972-01-01 *Selected Writings of T.C. Schneirla*, Edited by Lester R. Aronson, Ethel Tobach ... Jay S. Rosenblatt, Daniel S. Lehrman Theodore Christian SCHNEIRLA, 1972

**Portraits of Pioneers in Psychology** Gregory A. Kimble, Michael Wertheimer, 2000-11-01 This fourth book in the series continues the tradition of the popular earlier volumes by offering lively and entertaining information about some of contemporary psychology's most illustrious ancestors. The 21 chapters, many of them written by today's most visible and eminent authors, concentrate on the lives and achievements of major psychologists from a variety of areas. Created for undergraduate and graduate courses in the history of psychology, the variety of pioneers represented provides enough flexibility to also use it as a supplemental reader in other psychology courses. Each of the five volumes in this series contains different profiles, thereby bringing more than 100 of the pioneers in psychology more vividly to life. Patterns of Behavior Richard W. Burkhardt, 2005-03-15 Publisher Description Behavioral Development Kathryn E. Hood, Gary Greenberg, Ethel Tobach, 2013-11-26 First Published in 1995 Behavioral Development is Volume 1 in the Research and Developmental and Comparative Psychology series dedicated to honour the contributions of T C Schneirla. This volume represents the substantive content of the Fifth T C Schneirla Conference held in November of 1989. The volume is divided into three parts: the significance of the intensity of the adequate stimulus, the process of development, and the concept of integrative levels. Schneirla is still recognized as one of the foremost theoreticians in comparative psychology, and the rebirth of interest in comparative psychology is evident. **Before Speech** Margaret Bullowa, 1979-09-27 Long before they can make any sounds, approaching language infants can share in communication, though what this means is the subject of much scrutiny. This 1979 volume deliberately draws on people whose different backgrounds have brought them to explore questions that have a bearing on communication in this earliest phase of human infancy. This is then, as Dr Bullowa says in her introduction, primarily a book about how scientists go about finding out how infants and adults communicate with one another. It is nowhere dogmatic; contributors have all been encouraged to say why they came to do the research, reported how they set about it, and what they discovered. Dr Bullowa herself provides a useful introduction which makes its own substantial contribution while surveying the broad context of the particular research, discussing some of the themes that recur in the book, and relating them to the wider literature. Individual Development from an Interactional Perspective David Magnusson, 2015-03-27 Originally published in 1988, this title presents a longitudinal research project, Individual Development and Adjustment (IDA), planned and implemented at the Department of Psychology, University of Stockholm. This title concerns the theoretical background of the project, the planning and collecting of data during the second phase of the project when the participants had reached adulthood, and the presentation of some empirical illustrative studies based on the collected data. **Cognitive and Affective Growth (PLE: Emotion)** Shapiro Edna, Evelyn Weber, 2014-11-20 Originally

published in 1981 this title is a collection of chapters based on papers presented at a conference called to explore what the editors called a developmental interaction point of view an approach to developmental psychology and education that stresses these interactive and reciprocal relations The contributors although from diverse professional backgrounds are united in their commitment to an integrative view of developmental phenomena one that highlights relationships among different aspects of development and the reciprocal nature of relations between people and their environments **The Handbook of Life-Span Development, Volume 1** Richard M. Lerner, Willis F. Overton, 2010-12-14 In the past fifty years scholars of human development have been moving from studying change in humans within sharply defined periods to seeing many more of these phenomenon as more profitably studied over time and in relation to other processes The Handbook of Life Span Development Volume 1 Cognition Biology and Methods presents the study of human development conducted by the best scholars in the 21st century Social workers counselors and public health workers will receive coverage of of the biological and cognitive aspects of human change across the lifespan Individuals as Producers of Their Development Richard M Lerner, Nancy A. Busch-Rossnagel, 2013-09-03 Individuals as Producers of Their Development A Life Span Perspective provides an assessment of the usefulness of viewing the individual as an active contributor to his or her development It extends the breadth of organism environment reciprocities beyond those involved with the child and family On the one hand this extension involves a consideration of the role of evolutionary biological processes on the other it pertains to the broader ecology of human development the social network lying outside the family and the physical environmental contexts of development Person context reciprocities linked to variables that may play their greatest role in the extrafamilial context are also considered Variables such as physical attractiveness race and physical handicap are examples of those discussed in this regard Finally because of the greater scope of the analysis a potentially greater data base is examined in a search for documentation of the presence and role of dynamic person context interactions *Handbook of Developmental Science, Behavior, and Genetics* Kathryn E. Hood, Carolyn Tucker Halpern, Gary Greenberg, Richard M. Lerner, 2011-06-28 The Handbook of Developmental Science Behavior and Genetics brings together the cutting edge theory research and methodology that contribute to our current scientific understanding of the role of genetics in the developmental system Commemorates the historically important contributions made by Gilbert Gottlieb in comparative psychology and developmental science Includes an international group of contributors who are among the most respected behavioral and biological scientists working today Examines the scientific basis for rejecting the reductionism and counterfactual approach to understanding the links between genes behavior and development Documents the current status of comparative psychology and developmental science and provides the foundation for future scientific progress in the field *Survivor Personality* Al Siebert, 2010-07-06 The classic guide to what makes people survivors now in a revised and updated new edition Who survives Who thrives As a psychologist who spent more than forty years studying the phenomenon of survival Al

Siebert gained valuable insight into the qualities and habits that help human beings overcome difficult situations from everyday conflicts to major life stresses In this revised and updated edition he delineates the survivor personality and examines the latest research to show how survival skills can be learned leading to better coping increased success in work and relationships and a vastly brighter outlook on the future

**Six Legs Better** Charlotte Sleight, 2007-03-05 This provocative complex cultural history examines how the study of ants influenced shifting perceptions of humanity in the nineteenth and twentieth centuries Times Literary Supplement UK Ants long have fascinated linguists human sociologists and even cyberneticians At the end of the nineteenth century ants seemed to be admirable models for human life and were praised for their work ethic communitarianism and apparent empathy They provided a natural theological lesson on the relative importance of humans within creation and inspired psychologists to investigate the question of instinct and its place in the life of higher animals and humans By the 1930s however ants came to symbolize one of modernity's deepest fears the loss of selfhood Researchers then viewed the ant colony as an unthinking mass easily ruled and slavishly organized In this volume Charlotte Sleight uses specific representations of ants within the field of entomology from the late nineteenth to mid twentieth centuries to explore the broader role of metaphors in science and their often unpredictable translations Six Legs Better demonstrates the remarkable historical role played by ants as a node where notions of animal human and automaton intersect

In the Hearts of the Beasts Anne C. Rose, 2020-02-13 Animals cannot use words to explain whether they feel emotions and scientific opinion on the subject has been divided Charles Darwin believed animals and humans share a common core of fear anger and affection Today most researchers agree that animals experience comfort or pain Around 1900 in the United States however where intelligence was the dominant interest in the lab and field animal emotion began as an accidental question Organisms ranging from insects to primates already used to test learning displayed appetites and aversions that pushed psychologists and biologists in new scientific directions The Americans were committed empiricists and the routine of devising experiments observing and reflecting permitted them to change their minds and encouraged them to do so By 1980 the emotional behavior of predatory ants fearful rats curious raccoons resourceful bats and shy apes was part of American science In this open ended environment the scientists personal lives their families trips abroad and public service also affected their professional labor The Americans kept up with the latest intellectual trends in genetics evolution and ethology and they sometimes pioneered them But there is a bottom up story to be told about the scientific consequences of animals and humans brought together in the pursuit of knowledge The history of the American science of animal emotions reveals the ability of animals to teach and scientists to learn

**Readings in Animal Cognition** Marc Bekoff, Dale Jamieson, 1996 This collection of 24 readings is the first comprehensive treatment of important topics by leading figures in the rapidly growing interdisciplinary field of animal cognition Taken together the essays provide the nucleus for an introductory course in animal cognition cognitive ethology and comparative psychology philosophy of biology or philosophy
