✓ Exclusively available on IvyPanda

Instructional media can be defined as the tools that are used by educators to convey knowledge to learners. This is because learning cannot be conveyed through word of mouth and therefore, it is important for every educator to have them at hand (Scanlan, n.d).

The tools include chalk boards, compact disks, films, and handouts, among many others. These tools are used by educators to enhance the understanding of learners with regard to the topics that have been taught in the classroom.

Instructional media are used for various reasons in the ISD process. The first one being that they attract the attention of the learner. If an educator stood in front of learners and gave lectures without instructional media, the lesson could be boring and most learners can be distracted by other events.

A few writings on the chalk board go a long way towards drawing the attention of learners. This is because when a learner sees that the educator has written something on the board he/she will focus on what is being said about those writings.

Additionally, instructional media makes learning interesting. When there are films and compact discs the learning process is enhanced because films and videos, in particular, integrate entertainment into the learning process.

Besides, when there are computers involved learners can perform other tasks due to the multitasking ability of computers such as playing a computer game or watching a movie.

Scanlan (n.d) argues that this gives them freedom and thus they do not feel confined in the classroom. This can have a positive impact, especially among young learners.

When learning becomes interesting, the learners can hardly skip classes and this causes their performance to improve. Likewise, the media contains insights from different persons and thus, can be understood better.
