In its essence, the materials selection process, which is a critical task in modern engineering design and manufacturing, is regarded to be an information processing routine. The engineering design process, including the selection of materials in design, is regarded to be a decision making process in which choices are made from among the available alternatives. Development and use of a materials selection process, or materials selection processes, based on the principles of decision theory and information processing is called for. The process or processes so developed should be implemented on digital computer to take advantage of the computer's immense capacity for information processing. This would comprise an important component of computer-aided engineering.

1. Introduction

All manufactured products, constructed structures, and infrastructure, everything from toys, domestic utensils, and furniture, to agricultural, commercial, and industrial machines, to roads, bridges, and dams, is made of material. Therefore, at some point in the process of engineering design, decisions have to be made as to which materials and what processes will be used in order to realize the product. The importance of materials to mankind is perhaps best underscored by the fact that epochal eras in civilization have been identified by the materials that were then in prevalent use. The bronze age, the iron age, and the stone age are examples of this practice.

The engineering profession may be defined as “the art and science of harnessing the **information, materials and energy** resources that occur in nature, for the benefit of mankind.” Moreover, on a little reflection, it should be evident that the basic ingredients of any technology are energy, information, and materials. Materials, therefore, must be of great interest to the engineer. The engineers’ interest in materials may be drawn to diverse aspects such as *The Materials Science Aspect*, and *The Materials Management Aspect*. However, to design and manufacturing engineers, it is *The Materials Selection Aspect* that should be of most interest. Until recently, this particular aspect has often not been adequately addressed in the common literature on engineering design and manufacturing.

Farag,2013-11-19 Introducing a new engineering product or changing an existing model involves making designs reaching economic decisions selecting materials choosing manufacturing processes and assessing its environmental impact These activities are interdependent and should not be performed in isolation from each other This is because the materials and

processes used in making the product can have a large influence on its design cost and performance in service Since the publication of the second edition of this book changes have occurred in the fields of materials and manufacturing Industries now place more emphasis on manufacturing products and goods locally rather than outsourcing Nanostructured and smart materials appear more frequently in products composites are used in designing essential parts of civilian airliners and biodegradable materials are increasingly used instead of traditional plastics More emphasis is now placed on how products affect the environment and society is willing to accept more expensive but eco friendly goods In addition there has been a change in the emphasis and the way the subjects of materials and manufacturing are taught within a variety of curricula and courses in higher education This third edition of the bestselling Materials and Process Selection for Engineering Design has been comprehensively revised and reorganized to reflect these changes In addition the presentation has been enhanced and the book includes more real world case studies

Materials and Process Selection for Engineering Design, Second Edition Mahmoud M. Farag, 2008 Taking a practical approach this work illustrates how design materials and process selection must mesh together and be considered along with economic and environmental analysis when developing a new product or changing an existing model It also considers the trade offs that must sometimes be made This second edition adds and revises topics such as environmental function and aesthetic considerations in design environmental impact assessment of materials and processes life cycle and recycling economics and materials substitution The book begins with an intro that reviews stages of product development This is followed by three sections covering Mechanical failures environmental degradation and materials that resist different types of failure Elements of engineering design and the effect of material properties and manufacturing processes on the design of components Economic and environmental aspects of materials and manufacturing processes as well as quantitative and computer assisted methods for screening ranking alternatives and deciding on the optimum material process combination Examples and detailed case studies illustrating practical applications as well as materials selection and substitution from a variety of industries are included Each chapter begins with clear objectives and ends with a summary review questions and bibliography Appendices supply tables of composition and properties and a glossary of technical terms SI units are used with Imperial units given when possible This student friendly text demonstrates how to balance design materials process selection and economic and environmental analysis to optimize manufacturing processes for a given component The author maintains a book website which features PowerPoint presentations for each chapter and access to a solutions manual for qualifying instructors Professor Farag's book website

Publication ,1977 *Material Selections by a Hybrid Multi-Criteria Approach* Fabrizio D'Errico,2015-01-16 This Brief presents a new method that is based on the author and his students shared experience in applying a structured procedure that has as its main goal the creation of a material selection technique that uses language and employs a platform that is not restricted to engineers Based on a hybrid approach that exploits both traditional and semi quantitative concepts it moves forward step by step and uses a platform based on a Quality Function Deployment matrix framework Candidate materials are screened out and finally assessed by two user friendly graphic analysis tools one based on the value curve of the product and the other on an original Bubble Maps tool The Brief is written for all those whose aim is for a better understanding of how to integrate and speed up the entire product development process from the initial product concept and engineering design phases to design specs manufacturability and product marketing with optimal choice of materials *Integrated Product and Process Design and Development* Edward B. Magrab,1997-07-23 The Integrated Product and Process Design and Development IP2D2 method is quickly becoming the new standard for the rapid creation of competitively priced high quality products IP2D2 indicates in the broadest sense the overlapping interacting and iterative nature of all of the aspects of the product realization process The method is a continuous process whereby a product s cost performance and features value and time to market lead to a company s increased profitability and market share This new text reference reflects the sweeping changes this approach has brought to traditional engineering design courses and to industry Carefully organized with sections on each major stage of the approach Integrated Product and Process Design and Development The Product Realization Process is the first complete treatment of this new direction in engineering The book is designed to help you cultivate an attitude toward design that encourages creativity and innovation while considering the equally important

considerations of customer requirements and satisfaction quality reliability manufacturing methods and material selection assembly cost the environment and scheduling Extensively class tested in senior and graduate level engineering design courses at the University of Maryland the book gives equal time to conceptual and practical aspects As each concept is introduced and explained two book long examples provide you with a realistic sense of how a product s creation progresses through its various stages Numerous checklists and other practical guidelines help you learn to apply the IP2D2 method to your own work Students and newly graduated engineers will appreciate the modern perspective that more nearly reflects what they will encounter in practice than what is obtainable in traditional texts For more experienced practicing engineers this is the new information they need to keep up with recent rapid changes and stay marketable today and in the future

Materials Enabled Designs Michael Pfeifer, 2009-06-02 There are books aplenty on materials selection criteria for engineering design Most cover the physical and mechanical properties of specific materials but few offer much in the way of total product design criteria This innovative new text reference will give the Big picture view of how materials should be selected not only for a desired function but also for their ultimate performance durability maintenance replacement costs and so on Even such factors as how a material behaves when packaged shipped and stored will be taken into consideration For without that knowledge a design engineer is often in the dark as to how a particular material used in particular product or process is going to behave over time how costly it will be and ultimately how successful it will be at doing what is supposed to do This book delivers that knowledge Brief but comprehensive review of major materials functional groups mechanical electrical thermal chemical by major material categories metals polymers ceramics composites Invaluable guidance on selection criteria at early design stage including such factors as functionality durability and availability Insight into lifecycle factors that affect choice of materials beyond simple performance specs including manufacturability machinability shelf life packaging and even shipping characteristics Unique help on writing materials selection specifications **Engineered**
