#### **Investment Criteria for Mutual Fund Selection**

Jan Harkopf, 2016-10-07 The importance of mutual funds for individual investors has increased in recent decades This becomes apparent when looking at the increased share of households owning mutual funds These mutual fund investors usually want to receive a return which is above or at least close to the mutual fund's benchmark Consequently investors want to invest in those funds which will show these patterns in the future Some of these mutual funds receive much attention since they generate extraordinary high performance But the question that remains is whether it is possible to predict such performance before funds exhibit such outstanding performance In the past mutual fund investors focused extensively on performance or performance linked patterns like the Morningstar star rating and thus chased past performance This seems surprising since performance persists only over a short time and is more persistent to weak mutual funds 1 and 2 star rated than well performing mutual funds Thus chasing past performances seems to be a rather inferior strategy Therefore investors should try to identify alternative tools showing a high correlation to future mutual fund performance In this book mutual funds are analysed especially open end mutual funds and actively managed mutual funds The main focus is on what purpose and usefulness active investments have and whether performance is persistent and what the determinants of mutual fund flows are Moreover some alternative measures will be introduced by explaining which attributes or methods should be used and avoided when selecting mutual funds
