Selective History Of Theories Of Visual:

Selective history of theories of visual perception: 1650-1950 Nicholas Pastore, 1971 **Selective History of Theories of Visual Perception: 1650-1950** Nicholas Pastore, 1971 **Lectures on Perception** Michael T. Turvey, 2018-10-31 *Lectures on Perception An Ecological Perspective* addresses the generic principles by which each and every kind of life form from single celled organisms e.g. diatoms to multi celled organisms e.g. primates perceives the circumstances of their living so that they can behave adaptively. It focuses on the fundamental ability that relates each and every organism to its surroundings namely the ability to perceive things in the sense of how to get about among them and what to do or not to do with them. The book's core thesis breaks from the conventional interpretation of perception as a form of abduction based on innate hypotheses and acquired knowledge and from the historical scientific focus on the perceptual abilities of animals most especially those abilities ascribed to humankind. Specifically it advances the thesis of perception as a matter of laws and principles at nature's ecological scale and gives equal theoretical consideration to the perceptual achievements of all of the classically defined kingdoms of organisms: Archaea, Bacteria, Protocista, Fungi, Plantae, and Animalia.

Destined for Distinguished Oblivion Nicholas J. Wade, 2012-12-06 My first encounter with the name of William Charles Wells over twenty years ago was an oblique reference to his *Essay upon single vision* that Wheatstone 1838 made in a classical article on binocular vision. The reference was enigmatic because it stated that few had paid attention to Wells' theory of visual direction while doing little to inform the reader of its novelty. I was fortunate in having the excellent facility of the Rare Books and Manuscripts Department of the Library at the University of St Andrews near at hand so that I could consult a copy of Wells' monograph. However I was not aware of the full import of its contents until Hiroshi Ono visited Dundee from York University Ontario in 1980. Hiroshi had previously formalised the principles of binocular visual direction that Hering 1879 had proposed. He returned one day from St Andrews having read Wells' *Essay upon single vision* amazed to have found that Wells had performed similar experiments and reached similar conclusions to Hering. Hiroshi Ono has done much to bring Wells' work on binocular single vision to the notice of visual scientists although its reception has not been without opposition. As I read more of Wells' work on vision I became aware of its breadth as well as its depth. In addition to his essay on binocular single vision he wrote about and conducted experiments on accommodation, visual acuity, visual persistence, and vertigo. *Perception and Illusion* N.J. Wade, 2006-03-30 Our contact with the world is through perception and therefore the study of the process is of obvious importance and significance. For much of its long history the study of perception has been confined to naturalistic observation. Nonetheless the phenomena considered worthy of note have not been those that nurture our survival: the veridical features of perception but the oddities or departures from the common and commonplace accuracies of perception. With the move from the natural world to the laboratory the oddities of perception multiplied and they received ever more detailed scrutiny. My general intention is to examine the interpretations of the perc

tual process and its errors throughout history The emphasis on errors of perception might appear to be a narrow approach but in fact it encompasses virtually all perceptual research from the ancients until the present The constancies of perception have been taken for granted whereas departures from constancies errors or illusions have fostered fascination

Neurophysiological Aspects of Color Vision in Primates E. Zrenner, 2012-12-06 To explain all nature is too difficult a task for anyone man or even for anyone age 'Tis much better to do a little with certainty and leave the rest for others that come after you than to explain all things Sir Isaac Newton 1642 1727 This book describes and discusses some new aspects of color vision in primates which have emerged from a series of experiments conducted over the past 8 years both on single ganglion cells in monkey retina and on the visually evoked cortical potential in man corresponding psychophysical mechanisms of human perception will be considered as well An attempt will be made to better understand the basic mechanisms of color vision using a more comprehensive approach which takes into account new mechanisms found in single cells and relates them to those found valid for the entire visual system The processing of color signals was followed up from the retina to the visual cortex and to the perceptual centers as far as the available techniques permitted

The Key of Green Bruce R. Smith, 2010-02-15 From Shakespeare's green eyed monster to the green thought in a green shade in Andrew Marvell's The Garden the color green was curiously prominent and resonant in English culture of the sixteenth and seventeenth centuries Among other things green was the most common color of household goods the recommended wall color against which to view paintings the hue that was supposed to appear in alchemical processes at the moment base metal turned to gold and the color most frequently associated with human passions of all sorts A unique cultural history The Key of Green considers the significance of the color in the literature visual arts and popular culture of early modern England Contending that color is a matter of both sensation and emotion Bruce R Smith examines Renaissance material culture including tapestries clothing and stonework among others as well as music theater philosophy and nature through the lens of sense perception and aesthetic pleasure At the same time Smith offers a highly sophisticated meditation on the nature of consciousness perception and emotion that will resonate with students and scholars of the early modern period and beyond

The Visible, the Sublime and the Sensus Communis Tamar Japaridze,2020-07-30 This book argues that Kant develops a theory of perception in the Critique of Judgment from which one can redefine his entire project viewing and using aesthetics as its backbone from the transcendental aesthetic of the First Critique to the Critique of Taste in the Third The author shows us how Kant exonerates the role of faculties that account for such judgments linked by inner senses inclusive of sensus communis By re examining the role of the aesthetic within Kant s critical philosophy the compelling force of the aesthetic turn is revealed in modern philosophy The text includes Heidegger s Hegel s and Diderot s complex relationship to Kant in this context This text provides important scholarship for those interested in the Kantian influence on German Idealism the aesthetic turn in the continental tradition especially the Frankfurt school and more generally those interested in the encounter between philosophy and art in this historical context

Thomas Reid's Theory of Perception Ryan Nichols,2007-01-11 The thesis that the mind cannot directly apprehend features of the physical world what Reid calls the Way of Ideas is a staple of Early Modern philosophical tradition This commitment to the direct awareness of and only of mental representations unifies the otherwise divergent philosophical systems of Rationalists and Empiricists Thomas Reid battles against this thesis on many fronts in particular over the nature of perception Ryan Nichols lays the groundwork for Reid s theory of perception by developing Reid s unheralded argument against a representational theory of thought which Nichols applies to his discussion of the intentionality of perceptual states and Reid s appeal to signs Reid s efforts to preserve common sense epistemic commitments also lead him to adopt unique theories about our concepts of primary and secondary qualities and about original and acquired perceptions About the latter pair Nichols argues that most perceptual beliefs depend for their justification upon inferences The Way of Ideas holds that sensations are objects of awareness and that our senses are not robustly unified Nichols develops Reid s counter proposals by examining his discussion of the evolutionary purpose of sensations and the nature of our awareness of sensations as well as his intriguing affirmative answer to Molyneux s questions Nichols brings to the writing of this book a consummate knowledge of Reid s texts published and unpublished and a keen appreciation for Reid s responses to his predecessors He frequently reconstructs arguments in premise conclusion form thereby clarifying disputes that have frustrated previous Reid scholarship This clarification his lively examples and his plainspoken style make this book especially readable Reid s theory of perception is by far the most important feature of Reid s philosophical system and Nichols offers what will be for a long time to come the definitive analysis of this theory

The Colours of Our Memories Michel Pastoureau,2020-09-08 What remains of the colours of our childhood What are our memories of a blue rabbit a red dress a yellow bike and were they really those colours What colours do we associate with our student years our first loves our adult lives How does colour leave its mark on memory In an attempt to answer these and other questions Michel Pastoureau presents us with a journal about

colours that covers half a century Drawing on personal recollections he retraces the recent history of colours through an exploration of fashion and clothing everyday objects and practices emblems and flags sport literature museums and art This text playful poetic nostalgic records the life of both the author and his contemporaries We live in a world increasingly bursting with colour in which colour remains a focus for memory a source of delight and most of all an invitation to dream

Lombardo,2017-03-27 Originally published in 1987 this title intended to historically reveal through tracing Gibson's development the substance of his views and how they bore upon general philosophical issues in theories of knowledge and to investigate in detail the historical context of Gibson's theoretical position within psychology Though the author has included a history of Gibson's perceptual research and experimentation the focus is to explicate the dynamic abstract form of Gibson's ecological approach His emphasis is philosophical and theoretical attempting to bring out the direction Gibson was moving in and how such changes could restructure the theoretical fabric of psychology He devotes considerable attention to the Greeks Medievalists and the founders of the Scientific Revolution This is because Gibson's theoretical challenge runs deep into the structure of western thought The authors central goal was to set Gibson's ecological theory within the historical context of fundamental philosophical scientific issues In touch with the future Alberto Gallace,Charles Spence,2014-01-30 Out of all the human senses touch is the one that is most often unappreciated and undervalued Yet the surface of the human body the skin is actually one huge sheet of tactile receptors It provides us with the means to connect with our surroundings Despite the important role that vision plays in our everyday lives it is the skin that constitutes both the oldest and by far the largest of our sense organs The skin protects our body from the external world and at the same time informs us about what occurs on its surface In Touch With The Future explores the science of touch bringing together the latest findings from cognitive neuroscience about the processing of tactile information in humans The book provides a comprehensive overview of scientific knowledge regarding themes such as tactile memory tactile awareness consciousness tactile attention the role of touch in interpersonal and sexual interactions and the neurological substrates of touch It highlights the many ways in which our growing understanding of the world of touch can and in some cases already are being applied in the real world in everything from the development of virtual reality VR environments tablet PCs mobile phones and even teledildonics the ultimate frontier in terms of adult entertainment In addition the book shows how the cognitive neuroscience approach to the study of touch can be applied to help improve the design of many real world applications products as well as to many of our everyday experiences such as those related to the appreciation of food marketing packaging design the development of enhanced sensory substitution systems art and man machine interfaces Crucially the authors makes a convincing argument for the view that one cannot really understand touch especially not in a real world context without placing it in a multisensory context That is the senses interact to influence tactile perception in everything from changing the feel of a surface or product by changing the sound it makes or the fragrance it has For students and researchers in the brain sciences this book presents a valuable and fascinating exploration into one of our least understood senses *The Explanation of Social Action* John Levi Martin,2011-08-11 Why questions What explanations Causality and persons Authority and experience The grid of perception Action in and on a world A social aesthetics Valence and habit Fields and games Explanations explained *Cognitive Approaches to Human Perception* Soledad Ballesteros,2014-02-25 Examining the current state of the research in perception

stressing contributions in visual information processing this volume provides an original and timely account of recent results obtained in this and other related areas of cognitive psychology The scope of the book is intended to be broad featuring state of the art contributions from a number of outstanding researchers from different parts of the world the United States Europe and Australia The intention is to update areas of considerable theoretical implications and active experimental investigation in this broad field called the psychology of perception This volume s main purpose is to highlight from a cognitive position a selected number of important theoretical and empirical topics which deal with critical issues in perception and other high level related cognitive processes such as attention mental representation memory word naming and semantic categorization The studies reported were designed to answer many far reaching questions including Is the global precedence effect due to low or high level processing Can veridical and illusory perception be explained by the same theory What is the relationship between attention and perception Is perception direct or an inferential process What mechanisms are involved in picture and word naming and categorization How can word and picture processing be modeled The answers to these questions seek to unite theoretical perspectives on very important areas of cognitive psychology such as attention perception representation of visual objects and words and human memory

Learning About Objects in Infancy Amy Work Needham,2016-03-17 How do young infants experience the world around them How similar or different are infants experiences from adults experiences of similar situations How do infants progress from relatively sparse knowledge and expectations early in life to much more elaborate knowledge and expectations just several months later We know that much of infants learning before four to five months of age is visually based As they develop the ability to reach for objects independently they can explore objects that are of particular interest to them a new skill that must be important for their learning Through this transition to independent reaching and exploration infants go a long way toward forming their own understandings of the objects around them Towards the end of the first year of life infants begin manipulating one object relative to another and this skill sets the stage for them to begin using objects instrumentally using one object to create changes in other objects This new ability opens up many opportunities for infants to learn about using tools In this volume Amy Work Needham provides an extensive overview of her research on infant learning with a particular focus on how infants learn about objects She begins with an explanation of how basic aspects of how infants visual exploration of objects allows them to create new knowledge about objects and object categories She continues with a description of infants visual and manual learning about hand held tools and how these tools can be used to achieve goals Throughout she focuses on active learning and development which results in infants making important contributions to their own learning about objects She concludes by synthesizing the findings discussed pulls out recurring themes across studies and brings together fundamental principles of how infants learn about objects
