Self Propelled Howitzers:

German Self-Propelled Artillery Guns of the Second World War Craig Moore, 2019-03-19 One of the few books that explores the design and deployment of German artillery self propelled guns SPGs to support tanks and infantry during the Second World War A great reference book for military modellers historians and tank wargamers interested in German SPGs A comprehensive guide to German SPGs between 1939 and 1945 in one volume for the very first time including previously unpublished information on the little known Hummel Wespe proving that at least twelve units were built Authentic camouflage suggestions for military modellers A single towed artillery gun required a team of six horses and nine men During the Second World War German engineers mounted an artillery gun on top of a tank chassis this new technology reduced the amount of valuable war resources as self propelled guns only required a four or five man crew They could also be made ready to fire more rapidly German Self Propelled Artillery Guns of the Second World War covers the development and use of this new weapon between 1939 and 1945 One type was successfully deployed in the invasion of France in 1940 and more were used on the Eastern Front against Soviet forces from 1941 until the end of the war The Desert Fox Ewin Rommel demanded artillery guns that could keep up with his panzers in North Africa He was sent 15 cm howitzers mounted on top of Panzer II tank chassis and captured French Army Lorraine 37L tracked armoured supply vehicles Rommel's forces in northern France were equipped with a variety of new self propelled guns which were used against the Allies on the beaches of Normandy during D Day in 1944 Includes 81 colour photographs [M108/M109 Self-propelled Howitzers](#) David Doyle, 2010 **Red Army Self-Propelled Guns of the Second World War** Alexey Tarasov, 2025-01-30 Among all the branches of the Red Army during the Second World War self propelled artillery is probably the most overlooked and misinterpreted Attention has focused on the tanks the Red Army deployed against the Germans on the Eastern Front the T 34 in particular the self propelled guns which played an increasingly important tactical role after the shocking defeats of 1941 and 1942 have been neglected Alexey Tarasov in this detailed wide ranging and very heavily illustrated history describes how the Soviets rose to the challenge of creating a series of self propelled guns in extraordinarily difficult wartime conditions and he assesses and illustrates all the types they produced Also he covers the organization training tactics and combat operations of the self propelled artillery units When the Germans invaded the Soviets lacked self propelled artillery believing that tanks and field guns would provide sufficient support for their infantry But the effectiveness of the German assault guns persuaded them that they had to design similar armoured vehicles and rapidly they did so As the author shows by the end of the war after an intense process of improvisation and development they fielded self propelled guns in particular the SU 76 SU 122 and SU 152 which matched those of the Germans in terms of performance and heavily outnumbered them on the battlefield Alexey Tarasov's photographic history will be essential reading for anyone who has a special interest in Soviet armour and armoured warfare in general and it will be a valuable source for modellers *Self-propelled Howitzers* Simon Dunstan, 1985

Assessment of Crusader John Matsumura,Randall Steeb,John Gordon,1998 The research explores the utility of the Crusader system a next generation self propelled howitzer and resupply vehicle to the future of the U S Army including both the near term Army XXI and the farther term Army After Next Specific questions were asked about Crusader s ability to provide firepower on the future battlefield and to serve as a major technology carrier into the Army After Next era The report answers these questions and addresses other issues that may surface in considering the relative need for a state of the art self propelled howitzer in light of other Army interests *Self-Propelled Howitzers* Michael Green,Gladys Green,2004-09

Describes the M109A6 Paladin including its history equipment weapons tactics and future with the U S Army Includes photo diagram **M109 155mm Self-Propelled Howitzer 1960-2005** Steven J. Zaloga,2005-02-05 Entering service in the early 1960s the M109 Self Propelled Howitzer has been in production for 34 years and forms the backbone of US Army and Reserve artillery units The M109A6 is the latest development of the M109 series and incorporates advanced fire control systems that enable it to have its first rounds on target less than 60 seconds after arriving at firing location This ability to shift quickly between moving and firing modes avoids counter battery fire and ensures battlefield survivability This book details an impressive and versatile weapon that has served around the globe in Southeast Asia and in Operations Desert Shield and Desert Storm **GERMAN SELF-PROPELLED ARTILLERY AT WAR 1940 1945** IAN. Transportability Guidance ,1990 **Bridge Or Barrier: Does the Crusader Self- Propelled Howitzer Have a Weight Problem** ,1998 The American Army s current fleet of self propelled howitzers is largely outmoded and at its limit due to space and weight constraints to be upgraded This fire power shortfall is the impetus behind development of a new self propelled howitzer designed to not only overcome current shortfalls but to remain in the Army inventory for the next forty years The Crusader self propelled howitzer system is the new cannon currently under development The problem is that its weight of 110 tons combat loaded fifty five tons each for the howitzer and the resupply vehicle simply does not fit nicely with the current vision of agile quickly deployable forces operating on the future battlefield as described in Joint Vision 2010 and in the Army After Next In a period of increasing competition for scarce Defense Budget dollars critics have highlighted the system s reduced transportability due to its weight as marginalizing its value to the Army In a 6 April 1998 interview in Army Times the Chief of Staff of the Army General Dennis Reimer defended the Army position in developing the Crusader noting that such criticism ignored the increased tactical capability of the gun This monograph examines the question of whether the Crusader s tactical capabilities offset its weight The monograph begins with an examination of the Crusader system and the environment in which it is expected to operate Because any conflict has two sides the environment is not only considered from an American viewpoint but also from the view of how threat artillery systems may evolve The Crusade s tactical capabilities namely increased force effectiveness survivability flexibility and the ability to support a broader range of missions are derived from this information Finally the monograph analyzes the Crusade s transportability German

M109A2 (2350-01-031-0586) and 155mm, M109A3 (2350-01-031-8851). ,1989 *Kings of Battle Us Self-Propelled Howitzers, 1981-2022* David Grummitt,2023-12-30 It is for good reason that artillery is known as the king of battle In World War II the United States made good use of self propelled howitzers including those based on the chassis of the M4 Sherman

tank After 1945 the US developed both light and medium self propelled howitzers based on the M24 Chaffee M41 Walker Bulldog and Sherman chassis The first designs were plagued with problems and self propelled artillery played only a minor role in the Korean War By the mid 1960s however the M107 175mm M109 155mm and M110 203mms self propelled howitzers had entered service and they proved their effectiveness during the Vietnam War The M107 was relatively short lived in US service being retired in the late 1970s but it played an important role with the Israel defense Forces The M109 served with the US Army as well as in many NATO armies and elsewhere and saw action in the Middle East in the Balkans during the liberation of Kuwait and in the invasion of Iraq The M109 has now been in service for some sixty years and remains in the guise of the M109A7 the current self propelled howitzer of the US Army The larger M110 203mm self propelled howitzer similarly saw widespread service before it was retired in the early 1990s Despite the emergence of rocket artillery such as the Multiple Launch Rocket System the self propelled howitzer will remain one of the principal weapons systems of US military in the decades to come The M107 M109 and M110 have proved popular subjects among modelers with a variety of kits available from the major manufacturers As well as describing in detail the technical development and operational history of these guns this book gives a full account of the wide range of modeling kits and accessories available in all the popular scales Included is a modeling gallery which covers a range of variants and a section of large scale color profiles which provide both information and inspiration for modelers and military enthusiasts alike

The Marines at Twentynine Palms Thomas Q. O'Hara, 2007 The largest Marine Corps base in history the Marine Air Ground Task Force Training Center at Twentynine Palms is located on 930 square miles of harsh terrain nearly the size of Rhode Island in southern San Bernardino County An army base for training glider pilots at the outset of World War II the former navy facility was taken over by the corps in 1952 during the Korean War and the advent of the cold war The base provided adequate space and ranges to test new artillery and missile technology and was ideal for the largescale training of ground forces In the 21st century every U S Marine does a stint at Twentynine Palms because the climate terrain and remote location simulate many international hot spots of world strife The marines have continually upgraded and expanded the Twentynine Palms facilities as daily maneuvers involve transports tanks artillery and aircraft particularly at the Expeditionary Air Field
