Zammito, 2017-12-18 The emergence of biology as a distinct science in the eighteenth century has long been a subject of scholarly controversy Michel Foucault on the one hand argued that its appearance only after 1800 represented a fundamental rupture with the natural history that preceded it marking the beginnings of modernity Ernst Mayr on the other hand insisted that even the word biology was unclear in its meaning as late as 1800 and that the field itself was essentially prospective well into the 1800s In *The Gestation of German Biology* historian of ideas John Zammito presents a different version of the emergence of the field one that takes on both Foucault and Mayr and emphasizes the scientific progress throughout the eighteenth century that led to the recognition of the need for a special science The embrace of the term biology around 1800 Zammito shows was the culmination of a convergence between natural history and human physiology that led to the development of comparative physiology and morphology the foundations of biology Magisterial in scope Zammito's book offers nothing less than a revisionist history of the field with which anyone interested in the origins of biology will have to contend **Experiments and Observations Relative to the Influence Lately Discovered by M. basis of all thoughts sensations and actions The story begins with Luigi Galvani's chance observation of a spark from a friction machine causing a frog's leg to twitch from across the room The accurate recording and the understanding of the properties of the nerve fiber membrane that makes the impulse possible became the objectives of neuroscientists for over 200 years The author Alan J McComas finely interweaves the stories the challenges and the controversies of the most prominent figures in neuroscience from the histological descriptions of nerve cells by Cajal to the discovery of a three dimensional structure of ion channels in cell membranes by MacKinnon Along the way he details the first recordings of the impulse with a cathode ray oscilloscope by Gasser and Erlanger Adrian's discovery that stimulus intensity is coded by the frequency of nerve impulses and Hodgkin and Huxley's brilliant voltage clamp experiments amongst many others The recognition by Galvani that muscles and nerves have an electrical component triggered the field of neurophysiology and in turn has produced some of the greatest discoveries in neuroscience 16 investigators of the nerve impulse went on to win or share Nobel prizes and this book not only emphasizes their work but also traces their brilliant careers For anyone interested in the nervous system and the history of neuroscience Galvani's Spark The Story of the Nerve Impulse is essential reading
