Luminescence Of Crystals Molecules And Solutions:

Luminescence of Crystals, Molecules, and Solutions Ferd Williams, 2012-12-06 These Proceedings report the scholarly work presented in Leningrad at the largest conference ever held on luminescence In addition to the large number of delegates the Conference was distinguished by strong and balanced representation on the program of papers from capitalist and socialist nations The Conference was sponsored by the International Union of Pure and Applied Physics and by the Academy of Science of the USSR As noted in the Opening Ceremony this Conference is in the series held approximately every three years since 1938 All branches of luminescence are included It was recognized during the early stages of organization of the Conference that there would be difficulties associated with the preparation of an English version of the Proceedings Until just before the Conference it was not evident whether translations of the Russian papers would be available and whether facilities would exist at the Conference for a working publication committee to edit the manuscripts It was not possible therefore to make contractual arrangements before the Conference for publication

Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must

Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Volume 25: Optical Methods of Investigating Solid Bodies D. V. Skobel'tsyn, 2013-04-17 The principal results of the work are as follows 1 A simplified technique was devised for obtaining Raman spectra of powders 2 The Raman and infrared absorption spectra of the following oxides were investigated AsP₃ SbP₃ As₂O₃ SbP₅ TeO₂ GeO₂ two forms in the crystalline state and AsP₃ GeO₂ TeO₂ in the glassy state 2 5 2 3 The vibrational spectra of the crystalline and glassy forms of the oxides AsP₃ GeO₂ TeO₂ are similar in many main respects indicating a similarity of their structural units which determine the vibrational spectra of these substances 4 By a study of the vibrational spectrum it was shown that arsenious anhydride has a molecular structure and consists of As₂O₃ molecules having symmetry of the point group T_d The force constants and vibration frequencies of the As₂O₃ molecule were calculated and the vibrational spectrum of arsenious anhydride was reliably interpreted with the aid of these results 5 A similar result was obtained for antimonous anhydride consisting of Sb₂O₃ molecules with symmetry of the point group T_d The force constants for this molecule were found and the vibrational spectrum was calculated
