Parallel Machines: Parallel Machine Languages Robert A. Iannucci, 2012-12-06 It is universally accepted today that parallel processing is here to stay but that software for parallel machines is still difficult to develop However there is little recognition of the fact that changes in processor architecture can significantly ease the development of software In the seventies the availability of processors that could address a large name space directly eliminated the problem of name management at one level and paved the way for the routine development of large programs Similarly today processor architectures that can facilitate cheap synchronization and provide a global address space can simplify compiler development for parallel machines If the cost of synchronization remains high the programming of parallel machines will remain significantly less abstract than programming sequential machines In this monograph Bob Iannucci presents the design and analysis of an architecture that can be a better building block for parallel machines than any von Neumann processor There is another very interesting motivation behind this work It is rooted in the long and venerable history of dataflow graphs as a formalism for expressing parallel computation The field has bloomed since 1974 when Dennis and Misunas proposed a truly novel architecture using dataflow graphs as the parallel machine language The novelty and elegance of dataflow architectures has however also kept us from asking the real question What can dataflow architectures buy us that von Neumann architectures can't In the following I explain in a round about way how Bob and I arrived at this question

Spectrum Machine Language for the Absolute Beginner William Tang, 2022-03-31 First published in 1982 William Tang's Spectrum Machine Language for the Absolute Beginner is generally considered to be the best introduction to 8-bit machine code programming ever written With many great game writers crediting this as the book that got them started there still is no better way to learn the language at the heart of the ZX Spectrum As the original publisher Melbourne House

wrote If you are frustrated by the limitations of BASIC and want to write faster more powerful space saving programs or subroutines Spectrum Machine Language for the Absolute Beginner is the book for you Even with no previous experience of computer languages you will be able to discover the ease and power of the Spectrum s own language Each chapter includes specific examples of machine language applications which can be demonstrated and used on your Spectrum as well as a self test questionnaire At the end of the book all this is brought together in an entire machine language program from design right through to the complete listing of an exciting original arcade game Acorn Books is proud to present its Retro Reproduction Series a collection of classic computing works from the 1980s and 90s lovingly reproduced in the 21st century From standards of programming reference no self respecting microcomputer programmer would be without to obscure works not found in print anywhere else these modern reprints are perfect for any connoisseur of retro computing
