Moduli Spaces Of Curves Mapping Class Groups And Field Theory:

Moduli Spaces of Curves, Mapping Class Groups and Field Theory Xavier Buff, 2003 It concludes with a study of the canonical Galois action on the fundamental groupoids computed using Grothendieck Teichmüller theory Finally Chapter 3 studies strict ribbon categories which are closely related to braided tensor categories here they are used to construct invariants of 3 manifolds which in turn give rise to quantum field theories **BOOK JACKET**

Mapping Class Groups and Moduli Spaces of Riemann Surfaces Carl-Friedrich Bödigheimer, Richard Martin Hain, 1993 The study of mapping class groups and moduli spaces of compact Riemann surfaces is currently a central topic in topology algebraic geometry and conformal field theory This book contains proceedings from two workshops held in the summer of 1991 one at the University of Göttingen and the other at the University of Washington at Seattle The papers gathered here represent diverse approaches and contain several important new results With both research and survey articles the book appeals to mathematicians and physicists

Geometry of Algebraic Curves Enrico Arbarello, Maurizio Cornalba, Phillip Griffiths, 2011-03-10 The second volume of the Geometry of Algebraic Curves is devoted to the foundations of the theory of moduli of algebraic curves Its authors are research mathematicians who have actively participated in the development of the Geometry of Algebraic Curves The subject is an extremely fertile and active one both within the mathematical community and at the interface with the theoretical physics community The approach is unique in its blending of algebro geometric complex analytic and topological combinatorial methods It treats important topics such as Teichmüller theory the cellular decomposition of moduli and its consequences and the Witten conjecture The careful and comprehensive presentation of the material is of value to students who wish to learn the subject and to experts as a reference source The first volume appeared 1985 as vol 267 of the same series

Topology, Geometry And Field Theory - Proceedings Of The 31st International Taniguchi Symposium And Proceedings Of The Conference Kenji Fukaya, Dieter Kotschick, M Furuta, Toshitake Kohno, 1994-08-31 Nobel Symposium 129 on Neutrino Physics was held at Haga Slott in Enköping Sweden during August 19-24 2004 Invited to the symposium were around 40 globally leading researchers in the field of neutrino physics both experimental and theoretical The dominant theme of the lectures was neutrino oscillations which after several years were recently verified by results from the Super Kamiokande detector in Kamioka Japan and the SNO detector in Sudbury Canada Discussion focused especially on effects of neutrino oscillations derived from the presence of matter and the fact that three different neutrinos exist Since neutrino oscillations imply that neutrinos have mass this is the first experimental observation that fundamentally deviates from the standard model of particle physics This is a challenge to both theoretical and experimental physics The various oscillation parameters will be determined with increased precision in new specially designed experiments Theoretical physics is working intensively to insert the knowledge that neutrinos have mass into the theoretical models that describe particle physics The lectures provided a very good description of the intensive situation in

the field right now The topics discussed also included mass models for neutrinos neutrinos in extra dimensions as well as the seesaw mechanism which provides a good description of why neutrino masses are so small This book is A4 size and in full color

Automorphisms of Riemann Surfaces, Subgroups of Mapping Class Groups and Related Topics Aaron Wootton, S. Allen Broughton, Jennifer Paulhus, 2022-02-03 Automorphism groups of Riemann surfaces have been widely studied for almost 150 years This area has persisted in part because it has close ties to many other topics of interest such as number theory graph theory mapping class groups and geometric and computational group theory In recent years there has been a major revival in this area due in part to great advances in computer algebra systems and progress in finite group theory This volume provides a concise but thorough introduction for newcomers to the area while at the same time highlighting new developments for established researchers The volume starts with two expository articles The first of these articles gives a historical perspective of the field with an emphasis on highly symmetric surfaces such as Hurwitz surfaces The second expository article focuses on the future of the field outlining some of the more popular topics in recent years and providing 78 open research problems across all topics The remaining articles showcase new developments in the area and have specifically been chosen to cover a variety of topics to illustrate the range of diversity within the field

Symmetries and Groups in Contemporary Physics Chengming Bai, 2013 This volume focuses on developments in the field of group theory in its broadest sense and is of interest to theoretical and experimental physicists mathematicians and scientists in related disciplines who are interested in the latest methods and applications In an increasingly ultra specialized world this volume will demonstrate the interchange of ideas and methods in theoretical and mathematical physics

Galois Groups and Fundamental Groups Leila Schneps, 2003-07-21 Table of contents

Woods Hole Mathematics Nils Tongring, R. C. Penner, 2004 The central theme of this volume is the contemporary mathematics of geometry and physics but the work also discusses the problem of the secondary structure of proteins and an overview of arc complexes with proposed applications to macromolecular folding is given Woods Hole has played such a vital role in both my mathematical and personal life that it is a great pleasure to see the mathematical tradition of the 1964 meeting resurrected forty years later and as this volume shows resurrected with new vigor and hopefully on a regular basis I therefore consider it a signal honor to have been asked to introduce this volume with a few reminiscences of that meeting forty years ago Introduction by R Bott Wolf Prize Winner 2000

Topology, Geometry and Quantum Field Theory Ulrike Luise Tillmann, 2004-06-28 The symposium held in honour of the 60th birthday of Graeme Segal brought together leading physicists and mathematicians Its topics were centred around string theory M theory and quantum gravity on the one hand and K theory elliptic cohomology quantum cohomology and string topology on the other Geometry and quantum physics developed in parallel since the recognition of the central role of non abelian gauge theory in elementary particle physics in the late seventies and the emerging study of super symmetry and string theory With its selection of survey and research articles these proceedings fulfil the dual role of reporting on

developments in the field and defining directions for future research For the first time Graeme Segal s manuscript The definition of Conformal Field Theory is published which has been greatly influential over more than ten years An introduction by the author puts it into the present context *An Atlas of the Smaller Maps in Orientable and Nonorientable Surfaces*
David Jackson,Terry I. Visentin,2000-09-15 Maps are beguilingly simple structures with deep and ubiquitous properties They arise in an essential way in many areas of mathematics and mathematical physics but require considerable time and computational effort to generate Few collected drawings are available for reference and little has been written in book form about their enumerative a
