Development of NK Cells Klas Kärre, Marco Colonna, 2012-12-06 Our understanding of the function of natural killer NK cells has dramatically changed in recent years The discovery of NK receptors specific for MHC class I molecules and the study of the role of co stimulatory and adhesion molecules have led to an understanding of how NK cells recognize tumor and virally infected cells that have lost expression of MHC class I molecules or have altered distribution of normal cell surface molecules Such recognition events lead to intracellular signals which can be either stimulatory or inhibitory This book provides an insight into how NK cells develop how they learn to distinguish altered cells from normal cells and into their biological role in controlling infections and tumors **Tumor Immunology** Giorgio Parmiani, Michael T. Lotze, 2002-04-25

Recent advances in immunology and molecular biology have resulted in new therapeutic approaches being generated and implemented in cancer clinics The discovery of new antigens mechanisms of antigen presentation and interplay of cells involved in anti tumor immunity have made the clinical control of some cancers more plausible than previously tho

Cytotoxic Cells: Recognition, Effector Function, Generation, and Methods SITKOVSKY,HENKART,2012-12-06 Our motivation for putting together this book was the need for a single source reference that could be used as an introduction to cell mediated cytotoxicity for newcomers to this field such as students and fellows beginning work in our laboratories At present no such book is available and we felt that it would be useful as a teaching tool and as a way of conveying our enthusiasm about recent progress in the cytotoxicity field to our colleagues in allied areas It was with some hesitation that we approached our colleagues with the proposal for this book and we were pleased to find them very supportive of the idea and willing to participate We thought it important to broaden the scope of the book to include historical molecular cell biological and clinical aspects of cell mediated cytotoxicity To our knowledge this is the first book on cell mediated cytotoxicity with such a broad scope Historically studies on cellular cytotoxicity were part of cellular immunology from its origin One development of tremendous import was the advent of the ⁵¹Cr assay which allowed this arm of the immune response to be measured easily and quantitatively Thus a readout of this effector pathway is available within a few hours other immune effector functions can take days or even longer to assay and the assays are often less quantitative
