Molecular Biology Of Oncogenes And Cell Control Mechanisms:

Molecular Biology of Oncogenes and Cell Control Mechanisms Peter J. Parker, Matilda Katan, 1990-01-01 *Hemopoietic Growth Factors, Oncogenes and Cytokines in Clinical Hematology* E. Cacciola, A. B. Deisseroth, R. Giustolisi, 1994-01-13

Biomedical Index to PHS-supported Research: pt. A. Subject access A-H, 1992 *Biomedical Index to PHS-supported Research*, 1993 **Cell and Molecular Biology** Gerald Karp, 2009-10-19 Karp continues to help biologists make important connections between key concepts and experimentation The sixth edition explores core concepts in considerable depth and presents experimental detail when it helps to explain and reinforce the concepts The majority of discussions have been modified to reflect the latest changes in the field The book also builds on its strong illustration program by opening each chapter with VIP art that serves as a visual summary for the chapter Over 60 new micrographs and computer derived images have been added to enhance the material Biologists benefit from these changes as they build their skills in making the connection **An Introduction to Human Molecular Genetics** Jack J. Pasternak, 2005-06-14 An Introduction to Human Molecular Genetics Second Edition Jack J Pasternak The Second Edition of this internationally acclaimed text expands its coverage of the molecular genetics of inherited human diseases with the latest research findings and discoveries Using a unique systems based approach the text offers readers a thorough explanation of the gene discovery process and how defective genes are linked to inherited disease states in major organ and tissue systems All the latest developments in functional genomics proteomics and microarray technology have been thoroughly incorporated into the text The first part of the text introduces readers to the fundamentals of cytogenetics and Mendelian genetics Next techniques and strategies for gene manipulation mapping and isolation are examined Readers will particularly appreciate the text's exceptionally thorough and clear explanation of genetic mapping The final part features unique coverage of the molecular genetics of distinct biological systems covering muscle neurological eye cancer and mitochondrial disorders Throughout the text helpful figures and diagrams illustrate and clarify complex material Readers familiar with the first edition will recognize the text's same lucid and engaging style and will find a wealth of new and expanded material that brings them fully up to date with a current understanding of the field including New chapters on complex genetic disorders genomic imprinting and human population genetics Expanded and fully revised section on clinical genetics covering diagnostic testing molecular screening and various treatments This text is targeted at upper level undergraduate students graduate students and medical students It is also an excellent reference for researchers and physicians who need a clinically relevant reference for the molecular genetics of inherited human diseases **Research Awards Index**, 1989 Structured Biological Modelling Michael Kraus, Bernhard Wolf, 1995-07-31 Structured Biological Modelling presents a straightforward introduction for computer aided analysis mathematical modelling and simulation of cell biological systems This unique guide brings together the physiological structural molecular biological and theoretical aspects of the signal transduction network that regulates

growth and proliferation in normal and tumor cells It provides comprehensive survey of functional and theoretical features of intracellular signal processing and introduces the concept of cellular self organization Exemplified by oscillatory calcium waves strategies for the design of computer experiments are presented that can assist or even substitute for time consuming biological experiments The presented minimal model for proliferation associated signal transduction clearly shows the alterations of the cellular signal network involved in neoplastic growth This book will be useful to cell and molecular biologists oncologists physiologists theoretical biologists computer scientists and all other researchers and students studying functional aspects of cellular signaling **Annual Scientific Report** Ludwig Institute for Cancer Research,1989

Asbestos-related Cancer Mels Sluysen,1991 Molecular Mechanisms of Cancer Georg F. Weber,2007-09-12 This book describes molecular processes whose deregulation is important in the formation of tumors The material is developed from basic cell signaling pathways to their roles in the clinical manifestation of specific cancers Topics covered include molecular events intrinsic to tumor cells leading to growth deregulation extended lifespan and the ability to invade surrounding tissue protective mechanisms that prevent transformation including DNA repair and epigenetic regulation tumor host interactions with the endocrine system the immune system and blood vessel formation and the underlying molecular defects of individual cancers **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1993 **Scientific Report to the Council by the Director of Research** Imperial Cancer Research Fund (Great Britain),1990 *Bibliography of Agriculture* ,1993 The Cumulative Book Index ,1991 A world list of books in the English language **American Book Publishing Record** ,1998 **Peterson's Guide to Graduate Programs in the Biological and Agricultural Sciences** ,1991 *Graduate Programs in the Biological Sciences 2008* Peterson's Guides Staff,Peterson's,2007-12 The six volumes of Peterson s Annual Guides to Graduate Study the only annually updated reference work of its kind provide wide ranging information on the graduate and professional programs offered by accredited colleges and universities in the United States and U S territories and those in Canada Mexico Europe and Africa that are accredited by U S accrediting bodies Books 2 through 6 are divided into sections that contain one or more directories devoted to individual programs in a particular field Book 3 contains more than 4 000 programs of study in 53 disciplines of the biological sciences *Oncogenes and Growth Control* Patricia Kahn,Thomas Graf,2012-12-06 How is growth controlled in normal cells How are the growth control mechanisms perturbed in cancer cells This book provides an up to date description of research aimed at resolving these questions It is organized into four sections each containing a series of short reviews written by experts in the field The general headings are growth factors receptors and related oncogenes transduction of mitogenic signals and ras oncogenes nuclear oncogenes and regulation of gene expression and multiple steps involved in malignant transformation The articles emphasize concepts rather than detailed facts and are intended not only for specialists in the field but also for interested readers such as physicians and advanced students who wish to stay abreast of developments in one of the most exciting fields
