Natural Language Generation in Artificial Intelligence and Computational Linguistics Cecile L. Paris, William R. Swartout, William C. Mann, 2013-03-14 One of the aims of Natural Language Processing is to facilitate the use of computers by allowing their users to communicate in natural language There are two important aspects to person machine communication understanding and generating While natural language understanding has been a major focus of research natural language generation is a relatively new and increasingly active field of research This book presents an overview of the state of the art in natural language generation describing both new results and directions for new research The principal emphasis of natural language generation is not only to facilitate the use of computers but also to develop a computational theory of human language ability In doing so it is a tool for extending clarifying and verifying theories that have been put forth in linguistics psychology and sociology about how people communicate A natural language generator will typically have access to a large body of knowledge from which to select information to present to users as well as number of expressing it Generating a text can thus be seen as a problem of our ways decision making under multiple constraints constraints from the propositional knowledge at hand from the linguistic tools

available from the communicative goals and intentions to be achieved from the audience the text is aimed at and from the situation and past discourse Researchers in generation try to identify the factors involved in this process and determine how best to represent the factors and their dependencies

Handbook of Natural Language Processing Nitin Indurkha,Fred J. Damerau,2010-02-22 The Handbook of Natural Language Processing Second Edition presents practical tools and techniques for implementing natural language processing in computer systems Along with removing outdated material this edition updates every chapter and expands the content to include emerging areas such as sentiment analysis New to the Second EditionGreater **Algebraic Structures in Natural Language** Shalom Lappin,Jean-Philippe Bernardy,2022-12-23 Algebraic Structures in Natural

Language addresses a central problem in cognitive science concerning the learning procedures through which humans acquire and represent natural language. Until recently algebraic systems have dominated the study of natural language in formal and computational linguistics. AI and the psychology of language with linguistic knowledge seen as encoded in formal grammars, model theories, proof theories and other rule driven devices. Recent work on deep learning has produced an increasingly powerful set of general learning mechanisms which do not apply rule based algebraic models of representation. The success of deep learning in NLP has led some researchers to question the role of algebraic models in the study of human language acquisition and linguistic representation. Psychologists and cognitive scientists have also been exploring explanations of language evolution and language acquisition that rely on probabilistic methods, social interaction and information theory rather than on formal models of grammar induction. This book addresses the learning procedures through which humans acquire natural language and the way in which they represent its properties. It brings together leading researchers from computational linguistics, psychology, behavioral science and mathematical linguistics to consider the significance of non algebraic methods for the study of natural language. The text represents a wide spectrum of views from the claim that algebraic systems are largely irrelevant to the contrary position that non algebraic learning methods are engineering devices for efficiently identifying the patterns that underlying grammars and semantic models generate for natural language input. There are interesting and important perspectives that fall at intermediate points between these opposing approaches and they may combine elements of both. It will appeal to researchers and advanced students in each of these fields as well as to anyone who wants to learn more about the relationship between computational models and natural language.
