archaeological remains The contributors consider the role of the human in the formation of perspectives about the natural world and explore themes of agency affordances ecophobia gender and temporality Overall the volume reveals how in ancient imaginations environments were perceived as living entities with their own agency and respondent or even vulnerable to human actions and decision making It highlights how modern insights can enrich our understanding of the past and demonstrates the increasing relevance of ancient historical research for reflecting on current relations to the natural world

The Evidential Basis of Linguistic Argumentation

András Kertész,Csilla Rákosi,2014-04-15 Currently one of the methodological debates in linguistics focuses on the question of what kinds of data are allowed in different linguistic theories and what subtypes of data can work as evidence for or against particular hypotheses The first part of the volume puts forward a methodological framework called the p model that is expected to account for the data evidence problem in linguistics The aim of the case studies in the second part is to show how this framework can be applied to the everyday research practice of the working linguist and how it can increase the effectiveness of linguistic theorising Accordingly the case studies exemplify that the p model can come to grips with diverse object scientific quandaries in syntax semantics and pragmatics The third part includes case studies that illustrate how it copes with metascientific issues such as inconsistency in linguistic theories and the relationship between thought experiments and real experiments

Global Seismicity Dynamics and Data-Driven Science

Mitsuhiro Toriumi,2020-10-07 The recent explosion of global and regional seismicity data in the world requires new methods of investigation of microseismicity and development of their modelling to understand the nature of whole earth mechanics In this book the author proposes a powerful tool to reveal the characteristic features of global and regional microseismicity big data accumulated in the databases of the world The method proposed in this monograph is based on 1 transformation of stored big data to seismicity density data archives 2 linear transformation of microseismicity density data matrixes to correlated seismicity matrixes by means of the singular value decomposition method 3 time series analyses of globally and regionally correlated seismicity rates and 4 the minimal non linear equations approximation of their correlated seismicity rate dynamics Minimal non linear modelling is the manifestation for strongly correlated seismicity time series controlled by Langevin type stochastic dynamic equations involving deterministic terms and random Gaussian noises A deterministic term is composed minimally with correlated seismicity rate vectors of a linear term and of a term with a third exponent Thus the dynamics of correlated seismicity in the world contains linearly changing stable nodes and rapid transitions between them with transient states This book contains discussions of future possibilities of stochastic extrapolations of global and regional seismicity in order to reduce earthquake disasters worldwide The dataset files are available online and can be downloaded at springer.com

The Market and Public Choices

Alfonso Salinas,2018-01-12 This title was first published in 2003 This book assumes a viewpoint practically absent from contemporary economics and readdresses the first fundamental question of economics how should we decide how scarce resources should be allocated among competing uses By focusing on this question the book necessarily reconstitutes the link between ethics and economics Thus the book deals with a crucial topic the moral assessment of the market mechanism as a tool for allocating scarce resources The key tenet of the book is that the market achieves ends that transcends itself ends that

must remain the prerogative of civil society Questions of the foundations of moral philosophy are considered allocating scarce resources is shown to be an exclusively human capacity which means that the market is unable to determine such issues endogenously An intuitionist approach to moral philosophy is developed and this is placed in the context of the history of western moral philosophy The argument encompasses mathematical logic philosophy of mind moral philosophy and economics This key book will appeal to anyone interested in Economics and Ethics and the role of the state Dao Companion to ZHU Xi's Philosophy Kai-chiu Ng,Yong Huang,2020-03-04 Zhu Xi 1130 1200 has been commonly and justifiably recognized as the most influential philosopher of Neo Confucianism a revival of classical Confucianism in face of the challenges coming from Daoism and more importantly Buddhism His place in the Confucian tradition is often and also very plausibly compared to that of Thomas Aquinas slightly later in the Christian tradition This book presents the most comprehensive and updated study of this great philosopher It situates Zhu Xi s philosophy in the historical context of not only Confucian philosophy but also Chinese philosophy as a whole Topics covered within Zhu Xi s thought are metaphysics epistemology ethics political philosophy hermeneutics philosophy of religion moral psychology and moral education This text shows both how Zhu Xi responded to earlier thinkers and how his thoughts resonate in contemporary philosophy particularly in the analytic tradition This companion will appeal to students researchers and educators in the field *Gabriel'S Extinguishing the Atomic Hell Series* Yousuf Gabriel,2015-07-31 At a time unparalleled in history humanity faces a threat of universal nuclear doomsday with an end result of total annihilation of life on earth Being an enthusiast for global peace with an extensive research background Yousuf Gabriel explores the root cause of the nuclear problem Probing deep into the realms of theology philosophy atomism nuclear science literature and history amid a mist of mystification regarding universal nuclear dilemma Gabriel has tried to resolve the issue in the light of the Scriptures He is a philanthropist who warns humanity about nuclear hell and wants to shun the two edged sword of nuclear energy either for war or so called peaceful purpose Gabriels Extinguishing the Atomic Hell Series serves as the key to the future destiny of this now doomed humankind It is a case of dwindled religion and diminished faith versus science It is based on a miraculous prophecy rather a warning about nuclear hell given by the Quran more than fourteen centuries ago The prophecy has described the characteristics of the age in which atomism was supposed to appear as well as of the people who would become the victims of nuclear fire It has also given the remedial measures and solutions to avoid this nuclear doomsday The whole nuclear phenomena with all its characteristic scientific features is described in its entirety by this prophecy of the Holy Quran The major focus of criticism is the philosophy of Francis Bacon who preferred natural philosophy over moral philosophy for mans right of dominion over nature for the material utility Educate yourself about the dreadful outcome of adopting nuclear energy whether for war or peaceful purposes Learn how after a prolonged use of nuclear energy human and animal species may be converted to abhorrent monsters and chimeras Enlighten yourself in the light of Scriptures how humanity can avoid this shameful and

Lieu, 2006-05-01 This collection comprises eighteen papers by friends colleagues and students of Michal A Knibb on the theme of the transmission of biblical traditions in a variety of contexts In the main the articles deal with the transmission of biblical traditions in the versions the pseudepigrapha at Qumran and in early Christian writings The collection as a whole clearly demonstrates the way in which biblical traditions were shaped and re shaped creatively in the biblical early Jewish and Christian literature
