## **Natural Resources Bureaucratic Myths And Environmental Management:**

**Natural Resources** Richard Stroup, John Baden, David T. Fractor, 1983      *Natural Resources and the Environment* Paul R. Portney, 1984      **Energy Abstracts for Policy Analysis**, 1985      **Natural Resource Policymaking in Developing Countries** William Ascher, Robert G. Healy, 1990 Drawing on case studies developed over a two year period 1987-1989 by Fellows in the Program in International Development Policy at Duke University including experienced representatives from developing countries the World Bank and scholars the authors integrate the growing interest in environmental protection and resource conservation into the existing body of knowledge about the political economy of developing countries This book is about the links that tie resource use environmental quality and economic development and the way in which those links are affected by the distribution of income and resource ownership The links may be relatively simple as in the case of peasant farmers too poor to conserve resources for the future and with nothing to gain from sound environmental practices Or they may be very complex as the authors find when they demonstrate how achievement of higher incomes by the rich can increase environmentally destructive behavior by the poor Many of the links in some way involve rural land use whether for agriculture or forestry *Natural Resource Policymaking in Developing Countries* argues that the policies that matter are not merely those dealing with resources and the environment but a much broader set that includes income distribution and asset ownership      **Natural Resources Bureaucratic Myths and Environmental Management by Richard L. Stroup and John A. Baden, with the Assistance of David T. Fractor ; Foreword by William A. Niskanen** Richard L. Stroup, 1983

**Institutional Barriers and Incentives for Ecosystem Management** Hanna Cortner, 1996      *Sustainable Governance of Wildlife and Community-Based Natural Resource Management* Brian Child, 2019-10-23 This book develops the Sustainable Governance Approach and the principles of Community Based Natural Resource Management CBNRM It provides practical examples of successes and failures in implementation and lessons about the economics and governance of wild resources with global application CBNRM emerged in the 1980s encouraging greater local participation to conserve and manage natural and wild resources in the face of increasing encroachment by agricultural and other forms of land use development This book describes the institutional history of wildlife and the empirical transformation of the wildlife sector on private and communal land particularly in southern Africa to develop an alternative paradigm for governing wild resources With the twin goals of addressing poverty and resource degradation in the world's extensive agriculturally marginal areas the author conceptualises this paradigm as the Sustainable Governance Approach which integrates theories of proprietorship and rights prices and economics governance and scale and adaptive learning The author then discusses and defines CBNRM a major subset of this approach Interweaving theory and practice he shows that the primary challenges facing CBNRM are the devolution of rights from the centre to marginal communities and the governance of these rights by communities a challenge which is seldom recognised or addressed He focuses on this shortcoming extending and operationalising institutional theory

including Ostrom's principles of collective action within the context of cross scale governance Based on the author's extensive experience this book will be key reading for students of natural resource management sustainable land use community forestry conservation and development Providing practical but theoretically robust tools for implementing CBNRM it will also appeal to professionals and practitioners working in communities and in conservation and development

**The Moral Austerity of Environmental Decision Making** John Martin Gillroy, Joe Bowersox, 2002-06-17 A roundtable discussion on the missing ethical dimension in environmental policy **Public Lands and Private Rights** Robert Henry Nelson, 1995 One of the leading experts on public lands and land rights issues Robert H Nelson here brings together a collection of his finest essays Nelson demonstrates that the progressive goal of achieving scientific management of public lands has not been realized instead public land management has been dominated by interest group politics and ideology

Privatizing Public Lands Scott Lehmann, 1995-03-23 In the United States private ownership of land is not a new idea yet the federal government retains title to roughly a quarter of the nation's land including national parks forests and wildlife refuges Managing these properties is expensive and contentious and few management decisions escape criticism Some observers however argue that such criticism is largely misdirected The fundamental problem in their view is collective ownership and its solution is privatization A free market they claim directs privately owned resources to their most productive uses and privatizing public lands would create a free market in their services This timely study critically examines these issues arguing that there is no sense of productivity for which it is true that greater productivity is both desirable and a likely consequence of privatizing public lands or marketizing their management Lehmann's discussion is self contained with background chapters on federal lands and management agencies economics and ethics and will interest philosophers as well as public policy analysts **Welfare Economics and Externalities In An Open Ended Universe** R. Cordato, 2013-03-09

Along with the renewed interest in the Austrian school of economics over the last two decades important advances have been made in applying its principles to concrete issues that typically face market economics However very little has been done in the area of externalities and the concept of social efficiency The overarching purpose of this book is to establish a sound theoretical basis for further empirical and public policy analysis in the area of externalities In order to do this a general theory of welfare economics is required The author offers an alternative to the conventional neoclassical welfare paradigm his construct does not include perfect competition or general equilibrium After the author develops his theory of welfare economics he interprets externalities in light of the theory and discusses policy remedies and directions for further research

Timeless Heritage, 1988 Free Market/spec Sale/avail Hard Only Terry L. Anderson, 2019-04-11 Although there is in the United States a clear national consensus supporting the protection of the environment advocates often profoundly disagree about the policies best designed to achieve this end The traditional answer has been that government must intervene through legislation and regulation of behavior to preserve environmental values Th *Evolution and Innovation in*

*Wildlife Conservation* Brian Child, Helen Suich, Spenceley Anna, 2012-05-04 The crucible of innovation in wildlife and habitat conservation is in southern Africa where it has co evolved with decolonization political transformation and the rise of development ownership management and livelihood debates Charting this innovation early chapters deal with the traditional fines and fences conservation that occurred in the colonial and early post independence period with subsequent sections focussing on the experimentation and innovation that occurred on private and communal land as a result of the break from these traditional methods The final section deals with more recent innovations in the sector focussing on building and strengthening the relationships between parks and society Importantly the book provides a data rich summary of experimentation with more inclusive models of conservation in terms of ecological social political and economic indicators Published with the Southern African Sustainable Use Specialist Group SASUSG of IUCN      **The Law and Policy of**

**Ecosystem Services** J. B. Ruhl, Steven E. Kraft, Christopher L. Lant, 2013-03-19 The Law and Policy of Ecosystem Services is the first comprehensive exploration of the status and future of natural capital and ecosystem services in American law and policy The book develops a framework for thinking about ecosystem services across their ecologic geographic economic social and legal dimensions and evaluates the prospects of crafting a legal infrastructure that can help build an ecosystem service economy that is as robust as existing economies for manufactured goods natural resource commodities and human provided services The book examines the geographic ecological and economic context of ecosystem services and provides a baseline of the current status of ecosystem services in law and society It identifies shortcomings of current law and policy and the critical areas for improvement and forges an approach for the design of new law and policy for ecosystem services Included are a series of nine empirical case studies that explore the problems caused by society's failure to properly value natural capital Among the case study topics considered are water issues The Conservation Reserve Program the National Conservation Buffer Initiative the agricultural policy of the European Union wetland mitigation and pollution trading The Law and Policy of Ecosystem Services is a groundbreaking look at the question of whether and how law and policy can shape a sustainable system of ecosystem service management It is an accessible and informative work for faculty students and policy makers concerned with ecology economics geography political science environmental studies law and related fields      **The Wealth of Forests** Chris Tollefson, 1998 These are turbulent unpredictable yet opportune times for Canadian forestry Never before have competing demands on Canada's forest resources been so great At the same time we are finally being forced to confront the sustainable limit of these resources Now the improbable has happened government industry First Nations and NGOs appear to be part of an emerging consensus that industrial forestry in Canada must change The Wealth of Forests is a pioneering attempt to grapple with the policy implications of the transition to sustainable forestry While much has been written on the theory and practice of sustainable forestry and on the relative merits of regulatory versus market approaches to environmental protection these literatures have not as yet been bridged Using illustrations based on recent developments

in British Columbia forest policy this collection provides that bridge by analyzing the potential and limits of market regulatory and other policy instruments as means of achieving sustainability Featuring new work by many of Canada's leading forest policy scholars this interdisciplinary collection is devoted to translating the concept of sustainability into practice in key areas of forest policy including tenure timber pricing forest practices land use zoning and eco certification The *Wealth of Forests* also considers how domestic and international legal regimes might constrain the adoption of policies that could bring us close to the elusive goal of sustainable forestry
