points out the economic toolkit for dealing with environmental problems has become formidable. It includes taxes, charges, permits, deposit refund systems, labeling, and other information disclosure mechanisms. Though not all these devices are widely used, empirical application has started within some sectors, and we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market-based incentives. Sterner's book encourages more widespread and careful use of economic policy instruments. Intended primarily for application in developing and transitional countries, the book compares the accumulated experiences of the use of economic policy instruments in the U.S. and Europe as well as in select rich and poor countries in Asia, Africa, and Latin America. Ambitious in scope, the book discusses the design of instruments that can be employed in a wide range of contexts, including transportation, industrial pollution, water pricing, waste, fisheries, forests, and agriculture. *Policy Instruments for Environmental and Natural Resource Management* is deeply rooted in economics but also informed by perspectives drawn from political, legal, ecological, and psychological research. Sterner notes that in addition to meeting requirements for efficiency, the selection and design of policy instruments must satisfy criteria involving equity and political acceptability. He is careful to distinguish between the well-designed plans of policymakers and the resulting behavior of society. Jonathan M. Harris, Brian Roach, 2017-06-26. Environmental issues are of fundamental importance, and a broad approach to understanding the relationship of the human economy and the natural world is essential. In a rapidly changing policy and scientific context, this new edition of *Environmental and Natural Resource Economics* reflects an updated perspective on modern environmental topics. Now in its fourth edition, this book includes new material on climate change, the cost competitiveness of renewable energy, global environmental trends, and sustainable economies. The text provides a balanced treatment of both standard environmental economics and ecological economics, based on the belief that these two approaches are complementary. Several chapters focus on the core concepts of environmental economics, including the theory of externalities, the management of public goods, the allocation of resources across time, environmental valuation, and cost-benefit analysis. Material on ecological economics includes such topics as macroeconomic scale, entropy, and green national accounting. Topical chapters focus on energy, climate change, water resources, international trade, forests, fisheries, and agriculture, with an emphasis on designing effective policies to promote sustainability and a green economy. Harris and Roach's premise is that a pluralistic approach is essential to understand the complex nexus between the economy and the environment. This perspective, combined with its emphasis on real-world policies, is particularly appealing to both instructors and students. This is the ideal text for classes on environmental, natural resource, and ecological economics. Environmental economics is one of the fastest growing areas of economics It establishes the true cost of natural resources including the costs of clean water and fresh air and discusses ways in which these costs can then be distributed among consumers This completely new textbook combines rigorous economic theory with its practical application in the environment to provide the most up to date and thorough coverage of the subject The author introduces input output models and general equilibrium analysis of environmental policy which is unique in an environmental economic text at this level and illustrates the text with real life case studies Los Angeles Peru Eastern Europe National Income and Nature: Externalities, Growth and Steady State J.J. Krabbe, Wim Heijman, 2012-12-06 Since the environmental revolution began in the late 1960s economists have done a lot of work in the field of economic theory building on the preservation of nature Meanwhile environmental economic literature has swelled to a large stream of articles in journals of different signature As a result a coherent economic view of the phenomenon of environmental degradation has emerged Several kinds of green public policies and their impacts on both nature and the performance of the economy have been analysed The feasibility of specific types of policy has also been discussed The aim of the book is to provide an insight into the ways economists analyse the problems of environmental pollution and the depletion of natural resource To this purpose a number of articles have been selected Some of them have a fundamental character others an applied nature and are foremost practically oriented The presentation of the collection emphasizes our belief that economists are able to deliver an essential contribution to the design of policies to protect nature It is clear that nature and environment may no longer be regarded as free gifts to society Rather they have to be seen as scarce resources and environmental disruption and resource depletion as allocation problems If a natural resource is scarce a price must be charged in accordance with the degree of scarcity since otherwise society will be confronted with misallocations In this connection there are two topics which are of particular interest to economists *The Guide to Graduate Environmental Programs*, 2013-04-22 The Guide to Graduate Environmental Programs provides over 160 profiles of graduate programs across the country that offer curricula related to the environment Because it was impossible to include every program in the book and because these programs are constantly changing Island Press welcomes suggested changes and additions to the profiles While Island Press is not the official author of the book we are eager to receive new or updated information to be included in the next edition Drawing from this information Island Press has created an online listing of programs that were not profiled in the book To submit your contribution either fill out the postcard included in the book itself or e mail the name address phone number and e mail address of the contact person for that program someone will

contact that person for further information as the second edition is developed If you would like to correct an error or to provide specific update information please e mail that information or return the card included in the book Following is a description of how the book was researched and the profiles compiled The research process began with a list drawn up by career center staff at University of California at Santa Barbara of 412 environmental programs departments and schools within universities across the country The list was based on a literature search queries over the Internet and contact with environmental professionals and associations Certificate only programs were not included Selection preference was given to programs mentioned repeatedly by environmental professionals and to those drawing a more diverse student body Postcards requesting information and course catalogues were sent to all 412 programs A survey was mailed to faculty representing each program Of the 412 graduate programs queried 156 programs completed and returned their surveys Each completed survey was reworked into a profile Schools that did not respond to the mailing were contacted twice by phone to remind them to return the survey To supplement this information and to ensure that the most noteworthy programs were included in the guide additional profiles were compiled for a select number of key programs that failed to return their surveys These latter profiles were based on literature review and personal interviews In all each program was contacted three times once by mail and twice by phone to encourage them to submit their surveys and to verify and update information The absence of a particular profile or segment of a profile reflects no editorial judgement on the part of the authors Rather if a specific program was not profiled the most likely explanation is that the program in question did not return its survey If you have information on other graduate environmental programs please pass that information on to us so that we can include them in future editions of the guide Most of the information provided was accurate as of November 1994 the date by which the surveys were completed and some follow up verification was conducted during the summer of 1996 before the book went into production There are an ever expanding number of programs in the environmental field and existing programs are constantly evolving Readers should therefore expect to continue to encounter ongoing changes in names titles and phone numbers
