**Natural Rubber** M.R. Sethuraj, Ninan T Mathew, 2012-12-02 No other book on natural rubber covers such a broad spectrum of subjects as this unique publication. Subjects related to the biology, cultivation and technology of natural rubber are dealt with along with such important aspects as its history, production and processing through to its sophisticated engineering applications. Every chapter follows a monograph style of presentation with comprehensive citations and depth of treatment. Contributions from highly experienced and still active renowned scientists reflect the truly international effort to the development of this commodity. In addition to the wealth of information presented, most of the chapters contain elaborate lists of earlier contributions in the respective fields. One chapter each has been included on rubber wood, ancillary products and guayule. It presents interdisciplinary approaches to promote advances in solving these challenges. By examining what has already been done and analyzing it in the context of what still needs to be done, particularly in the context of latest technologies and sustainability, the book helps to identify ideal methods for natural resource management and conservation. Each chapter begins with a graphical abstract and presents complicated or detailed content in the form of figures or tables. In addition, the book compares the latest techniques with conventional techniques and troubleshoots conventional methods with modifications, making it a practical resource for researchers in environmental science and natural resource management. Discusses the pros and cons of past and current endeavors related to natural resource management. Presents recent technologies and methods for management and conservation, particularly with applications for sustainability. Covers a variety of disciplines from environmental science to life science. Includes a graphical abstract as well as a section on significant achievements in the field and future perspectives. **World Agriculture**, 1978 **World Agricultural Economics and Rural Sociology Abstracts**, 1994 Ceres, 1990 FAO review on development varies **Economic and Political Weekly**, 2002 **Polysaccharides** Bhasha Sharma, M. Hartley, Marc Nerlove, R. Kyle Peters, World Bank, 1984 Study of supply response for perennial crops has frequently been limited by lack of data This study is based on new extensive time series for rubber in Sri Lanka covering total output producer prices new plantings replantings wage rates area under cultivation as well as many other variables In addition a survey of 49 rubber estates provides data on yields type and age of clone stand densities and many other variables This paper reports some preliminary analysis of the Sri Lankan data designed to test the adequacy of Dowling's analysis of supply response for rubber in Thailand based on a sophisticated reduced form supply function developed by Wickens and Greenfield for Brazilian coffee The model used in this study focuses on the uprooting replanting decision which is central to understanding rubber supply response in Sri Lanka as well as disaggregates the reduced form into several structural relationships Essential use is made of the age distribution and age yield profile data from the estate surveys This modest extension of the Wickens Greenfield formulation performs significantly better in the Sri Lankan context than a straightforward application of the model **Earth Shelter Digest & Energy**
