Natural States Desert Vision:

Desert Visions and the Making of Phoenix, 1860-2009 Philip VanderMeer, 2010-12-16 Whether touted for its burgeoning economy affordable housing and pleasant living style or criticized for being less like a city than a sprawling suburb Phoenix by all environmental logic should not exist Yet despite its extremely hot and dry climate and its remoteness Phoenix has grown into a massive metropolitan area This exhaustive study examines the history of how Phoenix came into being and how it has sustained itself from its origins in the 1860s to its present status as the nation's fifth largest city From the beginning Phoenix sought to grow and although growth has remained central to the city's history its importance meaning and value have changed substantially over the years The initial vision of Phoenix as an American Eden gave way to the Cold War Era vision of a High Tech Suburbia which in turn gave way to rising concerns in the late twentieth century about the environmental social and political costs of growth To understand how such unusual growth occurred in such an improbable location Philip VanderMeer explores five major themes the natural environment urban infrastructure economic development social and cultural values and public leadership Through investigating Phoenix's struggle to become a major American metropolis his study also offers a unique view of what it means to be a desert city

environmental impact of ski area development and people moving to the mountains to work and live **American Health**
,1988 **Natural States** Richard W. Judd,2010-09-30 Richard Judd and Christopher Beach define the environmental
imagination as the attempt to secure a sense of freedom permanence and authenticity through communion with nature The
desire for this connection is based on ideals about nature wilderness and the livable landscape that are personal variable and
often contradictory Judd and Beach are interested in the public expression of these ideals in post World War II environmental
politics Arguing that the best way to study the relationship between popular values and politics is through local and regional
records they focus on Maine and Oregon states both rich in natural beauty and environmentalist traditions but distinct in
their postwar economic growth Natural States reconstructs the environmental imagination from public commentary
legislative records and other documents Judd and Beach trace important divisions within the environmental movement noting
that they were balanced by a consistent civic minded vision of environmental goods shared by all They demonstrate how
tensions from competing ideals sustained the movement contributed to its successes but also limited its achievements In the
process they offer insight into the character of the broader environmental movement as it emerged from the interplay of local
state and national politics The study ends in the 1970s when spectacular legislative achievements at the national level were
masking a decline in mainstream civic engagement in state politics The authors note the rise of the private ecotopia and the
increasing complexity in the way Americans viewed their connections with the natural world Yet today despite wide
variations in beliefs and lifestyles a majority of Americans still consider themselves to be environmentalists In Natural States
environmental politics emerges less as a conflict between people who do and do not value nature and more as a debate about
the way people define and then chose to live with nature In their attempt to place the passion for nature within a changing
political and cultural context Judd and Beach shed light on the ways that ideals unify and divide the environmental movement
and act as the source of its enduring popularity National Parks ,1991
