Natural Resource Management And Institutional Change:

Natural Resource Management and Institutional Change Diana Carney, John Farrington, 2005-06-22 Using new evidence from a three year programme of research in developing countries in Asia Latin America and Africa the authors describe how government organizations have been privatised decentralised or restructured while private sector organizations both non profit and commercial have taken on increasingly important roles in resource management and service supply This book provides an important and easily accessible point of reference for decision makers and students alike offering unique view in its breadth of coverage across the natural resources sector and a range of different institutional types and approaches to resource management *Institutional Change for Sustainable Development* Robin Connor, Stephen Dovers, 2004-01-01 this book makes an interesting and worthwhile contribution to the ever expanding body of literature on sustainable development and therefore is to be recommended Karen Scott Journal of Environmental Law this is an essential text for the study of sustainability and institutional change an invaluable professional development text for the practitioner and a text to ponder slowly in all its complexities for an academic study of sustainability Kate Crowley Australian Journal of Environmental Management Does the road to sustainable development run through institutional reform or better yet institutional learning In this well argued book Robin Connor and Stephen Dovers draw on a range of case studies to demonstrate the critical role that institutions play in determining the course of human environment relations Oran R Young University of California Santa Barbara US Connor and Dovers correctly argue that achieving sustainability is a long term process In this context they analyze broad institutional innovations toward sustainability to date from Europe to New Zealand from sustainability councils to property rights to suggest how the historical process might be improved and accelerated This is among the most constructive efforts I have read Richard B Norgaard University of California Berkeley US It is clear that the transition to ecologically sustainable patterns of development requires significant institutional change yet we face a paradox Although institutions are the primary means of driving reform they are themselves a root cause of unsustainable development and a barrier to positive change This volume moves beyond the current debate by advancing our understanding of the nature of institutional change the features of more appropriate institutional settings and the manner in which change can be enabled Institutional Change for Sustainable Development presents a flexible accessible yet robust conceptual framework for comprehending institutional dimensions of sustainability emphasising the complexity of institutional systems and highlighting the interdependence between policy learning and institutional change This framework is applied and developed through the analysis of five significant arenas of institutional and policy change environmental policy in the EU New Zealand s landmark Resource Management Act strategic environmental assessment emerging National Councils for Sustainable Development and transformative property rights instruments From these explorations key principles for institutional change are identified including the institutional accommodation of a sustainability discourse the

interdependence of normative and institutional change reiteration and learning integration in policy and practice subsidiarity and legal change Institutional Change for Sustainable Development will be of interest to researchers policymakers and practitioners concerned with sustainability resource management and environmental policy

Games for triggering collective change in natural resource management: A conceptual framework and insights from four cases from India Falk, Thomas, Zhang, Wei, Meinzen-Dick, Ruth Suseela, Bartels, Lara, 2021-01-20 As resource users interact and impose externalities onto each other, institutions are needed to coordinate resource use, create trust, and provide incentives for sustainable management. Coordinated collective action can play a key role in enabling communities to manage natural resources more sustainably. But when such collective action is not present, what can be done to foster it? There is growing awareness that the governance of natural resources has to be adapted to the specific context. Interventions are often implemented at small scale and the potential to scale up facilitation-intensive approaches is limited. Moreover, sustainable resource management frequently fails to emerge or breaks down after the project ends. To date, researchers have typically used behavioral games to study cooperation patterns of communities. Recently, games have been adapted as learning and stakeholder engagement tools to improve management of the commons, strengthen self-regulation of resource use, and enhance constructive interactions among resource users. Combining games with other interventions and tools and facilitated discussions has been proposed as a promising approach to improve collective action institutions through experiential learning, a classic approach in education. This paper reviews existing literature and synthesizes lessons learned from a series of studies testing the use of behavioral games for institutional capacity development in India. We conclude that while games alone will not be the solution to all natural resource management challenges, games can provide a structured and therefore replicable approach for influencing behavior. They can

and have shaped the cultural landscapes of Switzerland. At the core of the book are five case studies from the German, French, and Italian speaking regions of Switzerland. Beginning in the late medieval ages and focussing on the transformative periods in the 19th and 20th Century, it traces the internal and external political, economic, and societal changes and examines what impact these changes had on commoners. It goes beyond the work of Robert Netting and Elinor Ostrom, who discussed Swiss commons as a unique case of robustness, by analysing how local commoners reacted to but also shaped changes by adapting and transforming common property institutions. Thus, the volume highlights how institutional changes in the management of the commons on the local level are embedded in the public policies of the respective cantons and the state, which generates a high heterogeneity and an actual laboratory situation. It shows the very different ways that local collective organisations and their members have followed in order to cope with the loss of value of the commons and the increased workload for maintaining common property management. Providing insightful case studies of commons management, this volume delivers theoretical contributions and lessons to be learned for the commons worldwide. This book will be of great interest to students and scholars of the commons, natural resource management, and agricultural development.

Research Handbook on the Sociology of Organizations Godwyn, Mary, 2022-06-10. With original contributions from leading experts in the field, this cutting edge Research Handbook combines theoretical advancement with the newest empirical research to explore the sociology of organizations. While including the traditional study of formal corporate business organizations, the Handbook also explores more transitory informal grassroots organizations such as NGOs and artist communities.

Opportunities, use, and transfer of systems research methods in agriculture to developing countries Goldsworthy, Peter, 2013-03-09. In December 1993, ISNAR in collaboration with the International Consortium for Application of Systems Approaches organized a three day workshop on systems approaches and modelling for agricultural development. Sponsored by the Dutch Ministry for Development Cooperation, the workshop was attended by participants from 12 national agricultural research systems (NARS), nine international agricultural research centers (IARCs), and five advanced research organizations (AROs). Although application of systems approaches in agricultural research and resource management is a rather new field, there is already increasing demand for implementation of these approaches. This will require a critical mass of specialists in the NARS and IARCs. Before this critical mass can be obtained, however, the experience that has been gained in this area needs to be evaluated, further possibilities need to be explored, and new objectives and targets need to be set. This book, which contains the papers presented at the workshop, assesses the state of the art of systems approaches in agricultural research, resource management, and rural planning. It also gives an impression of the evolution of this interdisciplinary field and its use in national and international research centers. Another less tangible outcome of the workshop was its contribution toward strengthening the network of NARS, IARCs, and AROs. It gave participants and organizers a chance to develop contacts and provided an opportunity to make the first proposals for collaborative programs. Special thanks are due to Peter Goldsworthy and Luc

Boerboom for their crucial role in making the workshop a success in this regard **Reforming Institutions in Water Resource Management** Lin Crase,Vasant P. Gandhi,2009-09-02 As water scarcities increase nations throughout the world are in search of better institutions to manage water resources India has been making substantial efforts to develop its water management systems since independence and significant increases in irrigated agriculture have taken place through both public and private initiatives However scarcities are increasing and major problems presently confront the management of water resources and irrigated agriculture Resolving these problems is crucial for the future The main purpose of this book is to provide a new approach for the analysis and design of water institutions that govern the use and development of water resources particularly for agriculture which is the largest user Drawing on the theory of New Institutional Economics and comparisons with Australia as a developed country and other less developed nations in Africa and Asia the authors present original empirical data from three Indian states Detailed analysis of these data is used to identify and recommend attributes and features of water management institutions that are conducive to effective resource management its long term success and its best contribution to development *Policies and Governance Structures in Woodlands of Southern Africa* Godwin S.
