Almost all its mammals are marsupials (mammals with pouches). There are over 150 kinds of Australian marsupials from tiny marsupial mice and moles to marsupial cats. Outside Australia marsupials are only found in South America with just one species in North America.

Madagascar is a huge island off the east coast of Africa. It is bigger than France. About 30 million years ago it came separated from Africa. Nine-tenths of the island's animals and plants are found nowhere else in the world. Its most famous animals are lemurs which are related to monkeys and apes.

DID YOU KNOW?

The sportive lemur gets its name because, if attacked, it rains down like a boxer and punches its enemy. It feeds on some tree flowers. The tree is covered in sharp spikes but the lemur does not seem to hurt itself as it leaps from stem to stem.

Roaring chorus

The indri, the largest of the lemurs, lives mostly high up in the tree tops. It uses sound to scare away enemies and call its young. Every morning and evening, families of indris break into wailing songs. Each indri joins in at a different time so the strange chorus may last for many minutes.

Sun worship

Silakas, or white lemurs, start off each day by lying in the sun for an hour or so. They climb to a tree top and face the sun with their arms outstretched. They do this to warm themselves up after a cool night but local people believed that the lemurs were worshipping the sun.

Fat store

Dwarf lemurs are amongst the smallest of the lemurs. The fat-tailed dwarf lemur eats insects, leaves and sap. During the rainy season it builds up a fat store under its skin and in its tail. It lives off this supply in the dry season when food is scarce.

Tenrecs

Another group of mammals found only in Madagascar are tenrecs. There are about 20 species of these small insect-eaters. Some have bristly coats like hedgehogs, others have fur. The common tenrec is the largest insect-eater in Madagascar. It may be as much as 40 cm (16 in) long, about the same size as a cat.
