Natural Resources And Sustainable Development B. K. Panda, Sukanta Sarkar, 2015. Natural resources are materials and components something that can be used that can be found within the environment. It occurs naturally within environments that exist relatively undisturbed by humanity in a natural form. It can be thought of as natural capital assets distinct from physical and human capital in that they are not created by human activity. Natural resource is often characterized by amounts of biodiversity and geodiversity existent in various ecosystems. They are useful materials from the Earth such as coal, oil, natural gas, and trees. People use natural resources as raw materials to manufacture or create a range of modern conveniences. Water and food provide humans with sustenance and energy, for example, and fossil fuels generate heat as well as energy for transportation and industrial production. Natural resources are the raw materials supplied by nature. Everything produced, used, and thrown away originates from natural resources. People cannot create natural resources. Sustainable development is a road map, an action plan for achieving sustainability in any activity that uses resources and where immediate and intergenerational replication is demanded. It is hoped that the present edition of this book will be beneficial to all concerned of the society in general and students, lawyers, advocates, academicians, human rights institutions, researchers, and NGOs working in natural science, economics field in particular.

Cultural Sustainability and the Nature-Culture Interface Inger Birkeland, Rob Burton, Constanza Parra, Katriina Siivonen, 2018-03-14. As contemporary socio-ecological challenges such as climate change and biodiversity preservation have become more important, the three pillars concept has increasingly been used in planning and policy circles as a framework for analysis and action. However, the issue of how culture influences sustainability is still an underexplored theme. Understanding how culture can act as a resource to promote sustainability rather than a barrier is the key to the development of cultural sustainability. This book explores the interfaces between nature and culture through the perspective of cultural sustainability. A cultural perspective on environmental sustainability enables a renewal of sustainability discourse and practices across rural and urban landscapes, natural and cultural systems, stressing heterogeneity and complexity. The book focuses on the nature-culture interface conceptualised as a place where experiences, practices, policies, ideas, and knowledge meet, are negotiated, discussed, and resolved. Rather than looking for lost unities or an imaginary view of harmonious relationships between humans and nature based in the past, it explores cases of interfaces that are context-sensitive and which consciously convey the problems of scale and time. While calling attention to a cultural or culturalised view of the sustainability debate, this book questions the radical nature-culture dualism dominating positive modern thinking as well as its underlying view of nature as pre-given and

Natural, Human-Made, and Coupled Human-Natural Systems Research Svetlana G. Maximova, Roman I. Raikin, Alexander A. Chibilev, Marina M. Silantyeva, 2023-03-16 This book is a collection of cutting edge and cross disciplinary studies on natural, human made and coupled human natural systems, addressing the challenge of developing integrated knowledge from multiple disciplines. The authors explore the structure, function and dynamic mechanisms of various systems, both natural and human made, as well as analyze their reciprocal interactions under the concept of coupled human natural systems. These interactions are used to understand feedback, nonlinearities, thresholds, time lags, legacy effects and path dependencies emerging across multiple spatial, temporal and organizational scales. In other words, this book is a collection of advanced research on unique properties of natural and human made systems, as well as human environment dynamics, reciprocal relationships and cross scale interactions. The authors outline prospects on building a holistic view of social development and coherent sustainability. Among the topics covered are the following: human networks, research adaptation of local people to social and environmental challenges, coupled dynamics of socioeconomic and environmental systems, critical issues in social science, climate change, research education for greater sustainability, peace, justice and strong institutions, advances in cultural traditions and strategies for social stability, innovative development and barriers to sustainable development, economic systems in the age of digital changes and unstable external environments. The scholars analyze how more effective technologies can enhance resilience, reduce vulnerability and minimize human impacts on natural systems, taking into consideration critical thresholds to prevent harmful feedback to human systems. The authors grasp the complexity of systems by integrating knowledge of constituent subsystems and their interactions. The framework developed by the authors is used to integrate human and natural systems for achieving greater sustainability, covering critical threats, challenges and best governance approaches and practices. The research results obtained from studies on coupled human natural systems are stronger, the authors argue, if compared with traditional discipline approaches.
