Hobart, 2018-04-16 Michael Hobart locates the great rift between science and religion not in ideological disagreement but in advances in mathematics and symbolic representation that moved past language to open new windows onto the natural world His work connects the cognitive breakthroughs of the past with intellectual debates ongoing in the twenty first century Scientific American .1974 Science and Narratives of Nature Sundar Sarukkai, 2017-07-05 The discourse and practice of science are deeply connected to explicit and implicit narratives of nature However nature has been understood in diverse ways by cultures across the world Could these different views of nature generate the possibility of alternate views on science Part of the innovative series Science and Technology Studies this volume looks at different conceptualizations of nature and the manner in which they structure the practice of the sciences The essays draw upon philosophy history sociology religion feminism mathematics and cultural studies and establish a dialogue between cultures through a multi disciplinary exploration of science With contributions from major scholars in the field this volume will deeply interest scholars and students of science and technology studies sociology history and philosophy of science as also environmental studies The Open Court, 1914 The Open Court Paul Carus, 1914 Multicivilizational Exchanges in the Making of Modern Science Arun Bala, Raymond W. K. Lau, Jianjun Mei, 2024-09-09 This book explores how and why exchanges across civilizations have come to enrich science today The dialogical dimension of the history of science has long

been marginalized by an excessive concern on why modern science emerged in Europe but not in any of the advanced civilizations of the East This focus upon what has been called Joseph Needham's Grand Comparative Question ignores his other project focused on showing how dialogues between civilizations have nurtured science Needham's Grand Dialogical Question if we may call it that by parity has directly or indirectly inspired a vast body of literature showing how interconnections of civilizations over the last three thousand years and exchanges of cosmological mathematical geographical physical biological and medical technologies techniques practices and knowledge have been woven together to produce current science Bringing together scholars whose research range across multiple civilizations and disciplines this book investigates the scope and limits of Needham's dialogical vision for science Surveys in Modern Mathematics Victor Prasolov, Yulij Ilyashenko, 2005-04-14 This collection of articles from the Independent University of Moscow is derived from the Globus seminars held there They are given by world authorities from Russia and elsewhere in various areas of mathematics and are designed to introduce graduate students to some of the most dynamic areas of mathematical research The seminars aim to be informal wide ranging and forward looking getting across the ideas and concepts rather than formal proofs and this carries over to the articles here Topics covered range from computational complexity algebraic geometry dynamics through to number theory and quantum groups The volume as a whole is a fascinating and exciting overview of Magic and Magicians in the Middle Ages and the Early Modern Time Albrecht contemporary mathematics Classen, 2017-10-23 There are no clear demarcation lines between magic astrology necromancy medicine and even sciences in the pre modern world Under the umbrella term magic the contributors to this volume examine a wide range of texts both literary and religious both medical and philosophical in which the topic is discussed from many different perspectives The fundamental concerns address issue such as how people perceived magic whether they accepted it and utilized it for their own purposes and what impact magic might have had on the mental structures of that time While some papers examine the specific appearance of magicians in literary texts others analyze the practical application of magic in medical contexts In addition this volume includes studies that deal with the rise of the witch craze in the late fifteenth century and then also investigate whether the Weberian notion of disenchantment pertaining to the modern world can be maintained Magic is oddly but significantly still around us and exerts its influence Focusing on magic in the medieval world thus helps us to shed light on human culture at large *Nature* Sir Norman Lockyer,1910 The Transformation of Mathematics in the Early Mediterranean World Reviel Netz, 2004-06-10 The transformation of mathematics from ancient Greece to the medieval Arab speaking world is here approached by focusing on a single problem proposed by Archimedes and the many solutions offered In this trajectory Reviel Netz follows the change in the task from solving a geometrical problem to its expression as an equation still formulated geometrically and then on to an algebraic problem now handled by procedures that are more like rules of manipulation From a practice of mathematics based on the localized solution and grounded in the

polemical practices of early Greek science we see a transition to a practice of mathematics based on the systematic approach and grounded in the deuteronomic practices of Late Antiquity and the Middle Ages With three chapters ranging chronologically from Hellenistic mathematics through late Antiquity to the medieval world Reviel Netz offers an alternate interpretation of the historical journey of pre modern mathematics 

Aristotle on Knowledge of Nature and Modern Skepticism Nathan R. Colaner, 2014-11-05 Confronting the scientific revolution s dismissal of Aristotle s physics and epistemology Nathan R Colaner revives this foundational philosopher s work to expose within it the underpinnings of modern philosophers most common intuitions about knowledge After Aristotle s picture of reality had been judged obsolete by the physics of the scientific revolution modern Western epistemologists fumbled along with doctrines that had little to do with everyday life These included Descartes notion of the evil genius Hume s claim that we can t know anything that we are not presently observing and Kant s rescue of knowledge in the context of idealism In Aristotle on Knowledge of Nature and Modern Skepticism Colaner articulates a notion of knowledge that is characteristically Aristotelian without being dependent on his metaphysics Simultaneously Colaner places Aristotle in dialogue with modern thinkers to create a bridge between classical and modern philosophy and reinstate Aristotle s prominence in the discipline of epistemology
