Nature Journal A Naturalists Year On Long Island:

A Nature Journal Dennis Puleston, 1992 The unique and brilliantly displayed book a gift to be cherished by all lovers of nature flows from the hand and heart of a great student and painter of nature Walking in a grove of conifers during the winter you may notice a few pine cone scales fluttering down Look up and you ll see several finchlike birds climbing among the cones like miniature parrots These are red crossbills These words are from the first section January of *A Nature Journal* whose text and accompanying 166 full color illustrations take us month by month through a year in Long Island s woods along its shores and into its surrounding seas No month is without its natural wonders In February in places protected from the north winds the first dandelions are in bloom About half an hour after sunset on a quiet night in March the male woodcock begins his spectacular spring courtship flight Strutting like a tiny turkey cock he utters an explosive nasal buzzy sound at intervals of several seconds May the month with a smile on its face is when the dogwood blooms horseshoe crabs mate and warblers pass to their northern breeding grounds All of nature is here the black skimmer and the bobwhite next to the jack in the pulpit the native red mulberry and the wild orchid September s handsome orange black and white monarch butterflies next to beach plums even snakes and mice In the autumn the last of the Norway maple leaves fall and the Christmas fern takes on a bright and contrasting luster while most of nature awaits the return of the sun in a never ending cycle of birth flowering quietude and rebirth

perhaps with even worse consequences It is often argued that large scale fluctuations in climate and sea levels have occurred over and over again in the geological past long before human activities could possibly have had any impact and that human effects are very small compared to those that occur naturally Should we conclude that human activity cannot significantly affect the environment or are these naturally occurring fluctuations actually being dangerously enhanced by humans This book examines these questions first by providing evidence for equilibrium and non equilibrium conditions in relatively undisturbed ecosystems and second by examining human induced effects The American Naturalist ,1894
