Phenomenology and Historical Thought Mark E. Blum, 2022-08-22 The volume begins with what is in common to contemporary phenomenological historians and historiographers That is the understandings that temporality is the core of

human judgment conditioning in its forms how we consciously attend and judge phenomena For every phenomenological historian or historiographer all history is an event a span of time This time span is not external to the individual rather forms the content and structure of every judgment of the person It is the logic used by the individual to structure the phenomenon attended Rather than the phenomenon being seen as something solely external it is understood by phenomenologists as also of our immediate awareness and thought Thus the phenomenological method discerns all judgment as based upon one's span of attention of inner or outer phenomena There is an intentionality to attention One intends one's own foci Attention is the temporal duration of that intending The volume offers a text that enables contemporary historians graduate students and even undergraduates who are well taught to understand both the history of phenomenology as a method of inquiry and the contemporary practice of phenomenological historical and historiographical thought

Nature, Human Nature, & Human Difference Justin E. H. Smith, 2015-06-30 People have always been xenophobic but an explicit philosophical and scientific view of human racial difference only began to emerge during the modern period Why and how did this happen Surveying a range of philosophical and natural scientific texts dating from the Spanish Renaissance to the German Enlightenment *Nature Human Nature and Human Difference* charts the evolution of the modern concept of race and shows that natural philosophy particularly efforts to taxonomize and to order nature played a crucial role Smith demonstrates how the denial of moral equality between Europeans and non Europeans resulted from converging philosophical and scientific developments including a declining belief in human nature's universality and the rise of biological classification The racial typing of human beings grew from the need to understand humanity within an all encompassing system of nature alongside plants minerals primates and other animals While racial difference as seen through science did not arise in order to justify the enslavement of people it became a rationalization and buttress for the practices of trans Atlantic slavery From the work of François Bernier to G W Leibniz Immanuel Kant and others Smith delves into philosophy's part in the legacy and damages of modern racism With a broad narrative stretching over two centuries *Nature Human Nature and Human Difference* takes a critical historical look at how the racial categories that we divide ourselves into came into being

The Natural History of Sexuality in Early America Greta LaFleur, 2020-08-04 How natural history made sex scientific in the eighteenth century If sexology the science of sex came into being sometime in the nineteenth century then how did statesmen scientists and everyday people make meaning out of sex before that point In *The Natural History of Sexuality in Early America* Greta LaFleur demonstrates that eighteenth century natural history the study of organic life in its environment actually provided the intellectual foundations for the later development of the scientific study of sex Natural historians understood the human body to be a porous envelope eminently vulnerable to its environment Yet historians of sexuality have tended to rely on archival evidence of genital based or otherwise bodily sex acts for source material Through careful readings of both elite natural history texts and popular print forms that circulated widely in the British North American colonies among them Barbary captivity execution cross dressing and anti vice narratives LaFleur traces the development of a broad knowledge of sexuality defined in terms of the dynamic relationship between the human and the natural social physical and climatic milieu At the heart of this book is the question of how to produce a history of sexuality for an era in which modern vocabularies for sex and desire were unavailable LaFleur demonstrates how

environmental logic was used to explain sexual behavior on a broad scale not just among the educated elite who wrote and read natural historical texts LaFleur reunites the history of sexuality with the history of race demonstrating how they were bound to one another by the emergence of the human sciences Ultimately *The Natural History of Sexuality in Early America* not only rewrites all dominant scholarly narratives of eighteenth century sexual behavior but also poses a major intervention into queer theoretical understandings of the relationship between sex and the subject
