Nature Science:

The Battle for Human Nature: Science, Morality and Modern Life Barry Schwartz, 1987-08-17 Provocative and richly textured Schwartz's analyses of the inadequacies of contemporary scientific views of human nature are compelling but the consequences are even more worthy of note Los Angeles Times Out of the investigations and speculations of contemporary science a challenging view of human behavior and society has emerged and gained strength It is a view that equates human nature utterly and unalterably with the pursuit of self interest Influenced by this view people increasingly appeal to natural imperatives instead of moral ones to explain and justify their actions and those of others God's Action in Nature's World

Environmental Practice and Early American Literature Michael Ziser, 2013-07-29 This original and provocative study tells the story of American literary history from the perspective of its environmental context Weaving together close readings of early American texts with ecological histories of tobacco potatoes apples and honey bees Michael Ziser presents a method for literary criticism that explodes the conceptual distinction between the civilized and natural world Beginning with the English exploration of Virginia in the sixteenth century Ziser argues that the settlement of the New World and the cultivation and exploitation of its bounty dramatically altered how writers used language to describe the phenomena they encountered on the frontier Examining the work of Harriet Grainger Cooper Thoreau and others Ziser reveals how these authors whether consciously or not transcribed the vibrant ecology of North America and the ways that the environment helped codify a uniquely American literary aesthetic of lasting importance Travelling Through Education Ole Skovsmose, 2005-01-01 This is a personal notebook from a conceptual travel But in a different sense it also represents a report on travelling The main part of the manuscript was written in Brazil Denmark and England whilst notes have also been inspired by visits to other countries So the book not only represents conceptual travel it also reflects seasons of real travelling In Part 1 the book comments on the critical position of mathematics education and also indicates some concerns of critical mathematics education Part 2 comments on mathematics in action and considers the discussion of mathematics as an applied discipline in the contexts of technology management engineering economics etc In Part 3 the book comments on mathematics and science

in general These comments are then generalised into a discussion of reason and of the apparatus of reason Finally Part 4 returns to the discussion of mathematics education and comments on notions that could become sensitive to the critical position of mathematics education Ole Skovsmose is also travelling between different academic fields He touches upon mathematics and mathematics education the philosophy of mathematics technology and science as well as sociological issues glancing over issues such as globalisation ghettoising learning society and risk society Travelling with the author the reader will become aware of connections between many of these different issues
