Impact of Natural Hazards on Oil and Gas Extraction Ian Lerche, Elchin Bagirov, 2013-03-09 Since the dissolution of the Soviet Union almost a decade ago there has been rapid evolution of interactions between the Western nations and individual countries of the former Soviet Union As part of that interaction the autonomous independent Republic of Azerbaijan through its scientific arm the Geological Institute of the Azerbaijan Academy of Sciences under the Directorship of Academician Akif Ali Zadeh and Deputy Director Ibrahim Guliev arranged for personnel to be seconded to the University of South Carolina The idea here was to see to what extent a quantitative understanding could be achieved of the evolution of the Azerbaijan part of the South Caspian Basin from dynamical thermal and hydrocarbon perspectives The Azeris brought with them copious amounts of data collected over decades which together with the quantitative numerical codes available at USC enabled a concerted effort to be put forward culminating in two large books *Evolution of the South Caspian Basin Geological Risks and Probable Hazards* 675 pps and *The South Caspian Basin Stratigraphy Geochemistry and Risk Analysis* of which were published by the Azerbaijan Academy of 472 pps both Sciences and also many scientific papers Thus over the last four to five years an integrated comprehensive start has been made to understand the hydrocarbon proneness of the South Caspian Basin In the course of the endeavor to understand the basinal evolution it became clear that a variety of natural hazards occur in the Basin

Geological History of Britain and Ireland Nigel H. Woodcock, R. A. Strachan, 2012-05-21 Britain and Ireland have a remarkably varied geology for so small a fragment of continental crust with a fine rock record back through three billion years of geological time This history would have been interesting enough if it had been played out on relatively stable continental crust However Britain and Ireland have developed at a tectonic crossroads on crust once traversed by subduction zones and volcanic arcs continental rifts and mountain belts The resulting complexity is instructive fascinating and perplexing *Geological History of Britain and Ireland* tells the region's story at a level accessible to undergraduate geologists as well as to postgraduates professionals or informed amateurs This second edition is fully revised and updated reflecting our continually developing knowledge of the region's geology Full coverage is again given to the rich Precambrian and Early Palaeozoic history as well as to later events more relevant to hydrocarbon exploration The book is an essential starting point for more detailed studies of the regional geology Additional resources for this book can be found at <http://www.wiley.com/go/woodcock/geologicalhistory>

Rocks of Britain D.J. Fettes, A.L. Harris, 2012-12-06 The Advanced Science Institute on which this publication is based took the somewhat unusual form of a geological field symposium held during late August 1984. It was designed to demonstrate to experienced earth scientists from the North Atlantic area the full range of geological phenomena encountered in the British Caledonian rocks. The ASI travelled from South Wales to the far northwest of Scotland by the route shown on the map and in doing so examined sedimentary, igneous and metamorphic rocks from Pembrokeshire, Dyfed, Cardigan, Ceridigion, Snowdonia, Anglesey, the English Lake District and the Southern Uplands and Highlands of Scotland. Thus the fifty or so participants in the ASI studied the geological history and major structures of rocks exposed on either side of the supposed Lower Palaeozoic Iapetus Ocean, the British sector of which closed to the south of the present Southern Uplands. Wales 15 afforded insight into the nature of the late Precambrian basement of England and Wales and the relationship of sedimentary and volcanic cover sequences to this basement. The Ordovician sequence in Wales is a sample of the volcanic rocks typical of a marginal basin and were examined in Pembrokeshire and Snowdonia. The English Lake District 6 displays rocks from an island arc also of Ordovician age.
