Natures Second Kingdom:

Nature's Body Londa L. Schiebinger, 2004 Eighteenth century natural historians created a peculiar and peculiarly durable vision of nature one that embodied the sexual and racial tensions of that era When plants were found to reproduce sexually eighteenth century botanists ascribed to them passionate relations polyandrous marriages and suicidal incest and accounts of steamy plant sex began to infiltrate the botanical literature of the day Naturalists also turned their attention to the great apes just becoming known to eighteenth century Europeans clothing the females in silk vestments and training them to sip tea with the modest demeanor of English matrons while imagining the males of the species fully capable of ravishing women

Nature's Enigma Virginia Parker Dawson, 1987 Two striking discoveries made 1740 a turning point in the history of 18th century biology Charles Bonnet established that aphids could reproduce without male fertilization Shortly afterwards Abraham Trembley proved that a tiny aquatic animal the fresh water polyp or hydra could regenerate from cuttings like some plants The discovery of the polyp was important because of the disturbing metaphysical issues that it raised In their letters written during the decade of the 1740s to Reaumur the great French Academician both Trembley Bonnet referred to the polyp as an enigma Not only did it seem to present a new mode of animal reproduction previously unsuspected but it called into question the prevailing mechanistic view of animal biology brought into focus the problem of animal soul Drawing on some of the most illuminating letters from the private archives of the Trembley family this study focuses on the discovery of the polyp using the correspondence of Bonnet Trembley to understand their common Genevan background their possible differences in approach from that of Reaumur

The Vital Landscape William M. Taylor, 2017-11-22 The Vital Landscape explores the arrival of the biological sciences most notably the sciences of life entailed in studies of botany and zoology ecology and evolutionary science physiology and psychology in the nineteenth century and their impact on architecture and landscape architecture in Great Britain Specifically the book explores the idea of the contrived or artificial environment as an object of both scientific speculation and aesthetic reflection Unlike specialist histories of biological science or environmental thought this book is unique in locating one source for present day concerns for the environment and human well being in debates over proper housing and the growing popularity of domestic and public gardens in the nineteenth century The book skilfully interweaves architecture and garden history the history and philosophy of science plant and animal physiology and human psychology works of literature popular science and domestic economy in a story that opens new opportunities for the study of architecture and gardens

The Light of Nature J.D. North, J.J. Roche, 2012-12-06 This volume of essays is meant as a tribute to Alistair Crombie by some of those who have studied with him The occasion of its publication is his seven tieth birthday 4 November 1985 Its contents are a reflection or so it is hoped of his own interests and they indicate at the same time his influence on subjects he has pursued for some forty years Born in Brisbane Australia Alistair Cameron Crombie took a first degree in zoology at the University of Melbourne in 1938 after which he moved to Je sus College Cambridge There he

took a doctorate in the same subject with a dissertation on population dynamics foreshadowing a later interest in the history of Darwinism in 1942 By this time he had taken up a research position with the Ministry of Agriculture and Fisheries in the Cambridge Zoological Laboratory a position he left in 1946 when he moved to a lectureship in the history and philosophy of science at University College London H G Andrewartha and L C Birch in a survey of the history of insect ecology R F Smith et al History of Entomology 1973 recognise the importance of the works of Crombie with which they couple the earlier work of Gause as the principal stimulus for the great interest taken in interspecific competition in the mid 1940s The Book of Nature ... SCHOEDLER,1854 *Radical Botany* Natania Meeker,Antónia Szabari,2019-12-03 Winner 2019 Science Fiction

Technoculture Studies Book Prize *Radical Botany* excavates a tradition in which plants participate in the effort to imagine new worlds and envision new futures Modernity the book claims is defined by the idea of all life as vegetal Meeker and Szabari argue that the recognition of plants liveliness and animation as a result of scientific discoveries from the seventeenth century to today has mobilized speculative creation in fiction cinema and art Plants complement and challenge notions of human life *Radical Botany* traces the implications of the speculative mobilization of plants for feminism queer studies and posthumanist thought If as Michael Foucault has argued the notion of the human was born at a particular historical moment and is now nearing its end *Radical Botany* reveals that this origin and endpoint are deeply informed by vegetality as a form of pre and posthuman subjectivity The trajectory of speculative fiction which this book traces offers insights into the human relationship to animate matter and the technological mediations through which we enter into contact with the material world Plants profoundly shape human experience from early modern absolutist societies to late capitalism s manipulations of life and the onset of climate change and attendant mass extinction A major intervention in critical plant studies *Radical Botany* reveals the centuries long history by which science and the arts have combined to posit plants as the model for all animate life and thereby envision a different future for the cosmos **Current Catalog** National Library of Medicine (U.S.),1983

First multi year cumulation covers six years 1965 70 **Cultivating Commerce** Sarah Easterby-Smith,2018 A new social history of botany in Britain and France 1760 1815 demonstrating the significance of commerce horticulture and amateur scholarship *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1983 *The Life of Plants* Emanuele Coccia,2019-01-16 We barely talk about them and seldom know their names Philosophy has always overlooked them even biology considers them as mere decoration on the tree of life And yet plants give life to the Earth they produce the atmosphere that surrounds us they are the origin of the oxygen that animates us Plants embody the most direct elementary connection that life can establish with the world In this highly original book Emanuele Coccia argues that as the very creator of atmosphere plants occupy the fundamental position from which we should analyze all elements of life From this standpoint we can no longer perceive the world as a simple collection of objects or as a universal space containing all things but as the

site of a veritable metaphysical mixture Since our atmosphere is rendered possible through plants alone life only perpetuates itself through the very circle of consumption undertaken by plants In other words life exists only insofar as it consumes other life removing any moral or ethical considerations from the equation In contrast to trends of thought that discuss nature and the cosmos in general terms Coccia's account brings the infinitely small together with the infinitely big offering a radical redefinition of the place of humanity within the realm of life

Care of the Species John Hartigan Jr., 2017-11-15 Across the globe an expanding circle of care is encompassing a growing number of species through efforts targeting biodiversity profoundly revising the line between humans and nonhumans Care of the Species examines infrastructures of care labs and gardens in Spain and Mexico where plant scientists grapple with the complexities of evolution and domestication John Hartigan Jr uses ethnography to access the expertise of botanists and others engaged with cultivating biodiversity providing various entry points for understanding plants in the world around us He begins by tracing the historical emergence of race through practices of care on nonhumans showing how this history informs current thinking about conservation With geneticists working on maize Hartigan deploys Foucault's concept of care of the self to analyze how domesticated species are augmented by an afterlife of data In the botanical gardens of Spain Care of the Species explores seed banks herbariums and living collections depicting the range of ways people interact with botanical knowledge This culminates in Hartigan's effort to engage plants as ethnographic subjects through a series of imaginative interview techniques Care of the Species contributes to debates about the concept of species through vivid ethnography developing a cultural perspective on evolutionary dynamics while using ethnography to theorize species In tackling the racial dimension of efforts to go beyond the human this book reveals a far greater stratum of sameness than commonly assumed

Consuming Habits Jordan Goodman, Andrew Sherratt, Paul E. Lovejoy, 2005-07-26 This pioneering collection of original essays explores the rich analytical category of psychoactive substances from challenging historical and anthropological perspectives Psychoactive substances have been central to the formation of civilizations and the growth of the world economy Consuming Habits describes how and why tea and coffee replaced beer on the breakfast tables of 18th century Europe in Islamic emirates at the turn of the century kola nuts formed part of tax payments and were given as gifts by so called big men In 1902 opera singers had their doctors prescribe them cocaine to aid singing the original version of coca cola was described as a brain tonic This pioneering collection of original essays explores the rich analytical category of psychoactive substances from challenging historical and anthropological perspectives

The Graph of Sex and the German Text, 2022-06-08 [Botanophilia in Eighteenth-Century France](#) R.L. Williams, 2013-03-09 The book describes the innovations that enabled botany in the Eighteenth century to emerge as an independent science independent from medicine and herbalism This encompassed the development of a reliable system for plant classification and the invention of a nomenclature that could be universally applied and understood The key that enabled Linnaeus to devise his classification system was the discovery of the sexuality of plants

The book which is intended for the educated general reader proceeds to illustrate how many aspects of French life were permeated by this revolution in botany between about 1760 to 1815 a botanophilia sometimes inflated into botanomania The reader should emerge with a clearer understanding of what the Enlightenment actually was in contrast to some popular second hand ideas today

Science, Worldviews and Education Michael Matthews, 2009-07-14 This book has its origins in a special issue of the journal Science Education Volume 18 Numbers 6 7 2009 The essay by Costas Skordoulis Science and Worldviews in the Marxist Tradition did not appear in that special issue due to a mistake in production scheduling It was published in an earlier issue of the journal Volume 17 Number 6 2008 but has been included in this book version of the special issue As explained in the Introduction the catalyst for the journal special issue was the essay on Science Worldviews and Education submitted to the journal by Hugh G Gauch Jr This was circulated to the other contributors who were asked to write their own contribution in the light of the arguments and literature contained in the paper Hugh made brief Responses and Clarifications after the papers were written However the Tanis Edis article on Islam and my own article on Priestley were processed too late to benefit from Hugh's appraisal The journal is associated with the International History Philosophy and Science Teaching Group which was formed in 1987 The group stages biennial international conferences and occasional regional conferences details can be found at www.ihpst.org The group though the journal conferences and its electronic newsletter at www.ihpst.org

The Invisible World Catherine Wilson, 2020-12-08 In the seventeenth century the microscope opened up a new world of observation and according to Catherine Wilson profoundly revised the thinking of scientists and philosophers alike The interior of nature once closed off to both sympathetic intuition and direct perception was now accessible with the help of optical instruments The microscope led to a conception of science as an objective procedure driven mode of inquiry and renewed interest in atomism and mechanism Focusing on the earliest forays into microscopical research from 1620 to 1720 this book provides us with both a compelling technological history and a lively assessment of the new knowledge that helped launch philosophy into the modern era Wilson argues that the discovery of the microworld and the apparent role of living animalcula in generation contagion and disease presented metaphysicians with the task of reconciling the ubiquity of life with human centered theological systems It was also a source of problems for philosophers concerned with essences qualities and the limits of human knowledge whose positions are echoed in current debates about realism and instrument mediated knowledge Covering the contributions of pioneering microscopists Leeuwenhoek Swammerdam Malpighi Grew and Hooke and the work of philosophers interested in the microworld Bacon Descartes Leibniz Malebranche Locke and Berkeley she challenges historians who view the abstract sciences as the sole catalyst of the Scientific Revolution as she stresses the importance of observational and experimental science to the modern intellect

Canguilhem Stuart Elden, 2019-07-12 Georges Canguilhem 1904 95 was an influential historian and philosopher of science as renowned for his teaching as for his writings He is best known for his book The Normal and the Pathological

originally his doctoral thesis in medicine but he also wrote a thesis in philosophy on the concept of the reflex supervised by Gaston Bachelard. He was the sponsor of Michel Foucault's doctoral thesis on madness. However, his work extends far beyond what is suggested by his association with these thinkers. Canguilhem also produced a series of important works on the natural sciences including studies of evolution, psychology, vitalism, and mechanism, experimentation, monstrosity, and disease. Stuart Elden discusses the whole of this important thinker's complex work, including recently rediscovered texts and archival materials. Canguilhem always approached questions historically, examining how it was that we came to a significant moment in time, outlining tensions, detours, and paths not taken. The first comprehensive study in English, this book is a crucial guide for those coming to terms with Canguilhem's important contributions and will appeal to researchers and students from a range of fields.

A Cultural History of Plants in the Seventeenth and Eighteenth Centuries Jennifer Milam, 2023-12-14. A Cultural History of Plants in the Seventeenth and Eighteenth Centuries covers the period from 1650 to 1800, a time of global exploration and the discovery of new species of plants and their potential uses. Trade routes were established which brought Europeans into direct contact with the plants and people of Asia, Oceania, Africa, and the Americas. Foreign and exotic plants became objects of cultivation, collection, and display, whilst the applications of plants became central not only to naturalists, landowners, and gardeners but also to philosophers, artists, merchants, scientists, and rulers. As the Enlightenment took hold, the natural world became something to be grasped through reasoned understanding. The 6-volume set of the Cultural History of Plants presents the first comprehensive history of the uses and meanings of plants from prehistory to today. The themes covered in each volume are plants as staple foods, plants as luxury foods, trade and exploration, plant technology and science, plants and medicine, plants in culture, plants as natural ornaments, the representation of plants. Jennifer Milam is Pro Vice-Chancellor and Professor of Art History, University of Newcastle, Australia. Volume 4 in the Cultural History of Plants set. General Editors: Annette Giesecke, University of Delaware, USA, and David Mabberley, University of Oxford, UK.

The Vegetal Turn Marcello Di Paola, 2024-12-17. This book charts the multidimensional course of what has come to be known as the Vegetal Turn in environmental humanities, a wave of theoretical and practical interest in the complexities and peculiarities of plant life and plant-human relations. The vegetal turn consists of increasingly sophisticated inter- and trans-disciplinary inter- and trans-cultural explorations of the multiple systems and networks of communication, intelligence, technical, operational capabilities, and relations articulated by and via plants, as well as the ethical, economic, cultural, and political dimensions of plant-human interactions and practices. The volume includes contributions from philosophy and the humanities more generally that explore and reflect on the history, prospects, and applications of four main themes that the Vegetal Turn has brought to general attention: the mind of plants and what their peculiar mentality can tell us about mind more generally; plant personhood and/or moral standing and the justifications and implications of attributions thereof; plant relationships with humans; plant-based human relationships and the ethics of human

practices with or regarding plants from agriculture to the arts from forest management to urban design as well as the rights and or political representation of plant life and the other life forms that depend on it human as well as non human present and future **Nature's Second Kingdom** François Delaporte, 1984-01 Nature s Second Kingdom charts the concepts and practices of eighteenth century discourses on vegetality the whatever it is which is peculiar to plants
