## **Natures Experts:**

Nature's Experts Stephen Bocking, 2004-09-29 With clarity and grace Stephen Bocking tackles the complicated question of the role of scientific expertise in environmental policy making *Nature's Experts* is a timely and important book David H Guston author of *Between Politics and Science Assuring the Integrity and Productivity of Research* This book by Stephen Bocking is as much about deliberative democracy as it is about science and the environment Stephen Bocking's treatment is deep perceptive and profoundly wise He has caught the heart of present and future environmental science politics and democratic governance C S Holling The Resilience Alliance and emeritus professor Arthur R Marshall Jr Chair in Ecological Sciences at the University of Florida If knowledge is power how should expert advice be deployed by a would be democratic society This perennial question is newly illuminated by this timely and wide ranging review of the role played by science in the making of environmental policy William C Clark Harvey Brooks Professor of International Science Public Policy and Human Development Harvard University John F Kennedy School of Government It seems self evident that science plays a central role in environmental affairs Regulatory agencies businesses and public interest groups all draw on scientific research to support their claims Some critics however describe science not as the solution to environmental problems but as their source Moreover the science itself is often controversial as debates over global warming and environmental health risks have shown *Nature's Experts* explores the contributions and challenges presented when scientific authority enters the realm of environmental affairs Stephen Bocking focuses on four major areas of environmental politics the formation of environmental values and attitudes management of natural resources such as forests and fish efforts to address international environmental issues such as climate change and decisions relating to environmental and health risks In each area practical examples and case studies illustrate that science must fulfill two functions if it is to contribute to resolving environmental controversies First science must be relevant and credible and second it must be democratic where everyone has access to the information they need to present and defend their views The Law of Expert Testimony Henry Wade Rogers, 1883

*Seeing Nature Through Gender* Virginia Scharff, 2003 Environmental history has traditionally told the story of Man and Nature Scholars have too frequently overlooked the ways in which their predominantly male subjects have themselves been shaped by gender *Seeing Nature through Gender* here reintroduces gender as a meaningful category of analysis for environmental history showing how women's actions desires and choices have shaped the world and seeing men as gendered actors as well In thirteen essays that show how gendered ideas have shaped the ways in which people have represented experienced and consumed their world Virginia Scharff and her coauthors explore interactions between gender and environment in history Ranging from colonial borderlands to transnational boundaries from mountaintop to marketplace they focus on historical representations of humans and nature on questions about consumption on environmental politics and on the complex reciprocal relations among human bodies and changing landscapes They also challenge the ecofeminist position

by challenging the notion that men and women are essentially different creatures with biologically different destinies Each article shows how a person or group of people in history have understood nature in gendered terms and acted accordingly often with dire consequences for other people and organisms Here are considerations of the ways we study sexuality among birds of William Byrd s masking sexual encounters in his account of an eighteenth century expedition of how the ecology of fire in a changing built environment has reshaped firefighters own gendered identities Some are playful as in a piece on the evolution of snow bunnies to shred betties Others are dead serious as in a chilling portrait of how endocrine disrupters are reinventing humans animals and water systems from the cellular level out Aiding and adding significantly to the enterprise of environmental history Seeing Nature through Gender bridges gender history and environmental history in unexpected ways to show us how the natural world can remake the gendered patterns we ve engraved on ourselves and on the planet
