Naturoids: On The Nature Of The Artificial Massimo Negrotti, 2002-12-30 Since antiquity technology has tried to either control or imitate nature Both these traditions take advantage of the progress of science but their teleology and their typical design problems remain basically different The technology of the artificial may be defined as the effort to reproduce natural objects or processes by means of current conventional technology and materials This book reports on the results of a theoretical study of the logic characterizing any attempt to design something artificial While designers of artificial devices work in their own area facing field specific problems e g bioengineering artificial organs robotics AI ALife remakings etc the present study refers to the artificial in itself trying to find out what is common to instances very far from each other in an intrinsically interdisciplinary way The result may be defined as a proposal of a general theory of the artificial

The Reality of the Artificial Massimo Negrotti, 2012-06-05 The human ambition to reproduce and improve natural objects and processes has a long history and ranges from dreams to actual design from Icarus's wings to modern robotics and bioengineering This imperative seems to be linked not only to practical utility but also to our deepest psychology Nevertheless reproducing something natural is not an easy enterprise and the actual replication of a natural object or process by means of some technology is impossible In this book the author uses the term naturoid to designate any real artifact arising from our attempts to reproduce natural instances He concentrates on activities that involve the reproduction of something existing in nature and whose reproduction through construction strategies which differ from natural ones we consider to be useful appealing or interesting The development of naturoids may be viewed as a distinct class of technological activity and the concept should be useful for methodological research into establishing the common rules potentialities and constraints that characterize the human effort to reproduce natural objects The author shows that a naturoid is always the result of a reduction of the complexity of natural objects due to an unavoidable multiple selection strategy Nevertheless the reproduction process implies that naturoids take on their own new complexity resulting in a transfiguration of the natural exemplars and their performances and leading to a true innovation explosion While the core performances of contemporary naturoids improve paradoxically the more a naturoid

develops the further it moves away from its natural counterpart Therefore naturoids will more and more affect our relationships with advanced technologies and with nature but in ways quite beyond our predictive capabilities The book will be of interest to design scholars and researchers of technology cultural studies anthropology and the sociology of science and technology

Origin(s) of Design in Nature Liz Swan, Richard Gordon, Joseph Seckbach, 2012-08-27 Origin s of Design in Nature is a collection of over 40 articles from prominent researchers in the life physical and social sciences medicine and the philosophy of science that all address the philosophical and scientific question of how design emerged in the natural world The volume offers a large variety of perspectives on the design debate including progressive accounts from artificial life embryology complexity cosmology theology and the philosophy of biology This book is volume 23 of the series Cellular Origin Life in Extreme Habitats and Astrobiology www.springer.com series 5775

Theoretical Information Studies: Information In The World Mark Burgin, Gordana Dodig-crnkovic, 2020-03-24 This is the first attempt to delineate the synthetic field of the theoretical study of information treating information as the basic phenomenon on the fundamental level of the world encompassing nature technology individuals and society The exploration of information is done within Info computational approaches to natural and social phenomena such as Bioinformatics Information Physics Informational Chemistry Computational Physics Cognitive and Social sciences with special emphasis on interdisciplinary crossdisciplinary and transdisciplinary knowledge The book presents results of collaboration across research fields within info computational and info structural frameworks in attempt to better theoretically and conceptually capture the phenomenon of information and its dynamics such as computation and communication as they appear on different levels of organization on different scales and in different contexts

Nanotechnology Challenges Joachim Schummer, Davis Baird, 2006 This book introduces the latest methods for the controlled growth of nanomaterial systems The coverage includes simple and complex nanomaterial systems ordered nanostructures and complex nanostructure arrays and the essential conditions for the controlled growth of nanostructures with different morphologies sizes compositions and microstructures The book also discusses the dynamics of controlled growth and thermodynamic characteristics of two dimensional nanorestricted systems The authors introduce various novel synthesis methods for nanomaterials and nanostructures such as hierarchical growth heterostructures growth doping growth and some developing template synthesis methods In addition to discussing applications the book reviews developing trends in nanomaterials and nanostructures

Models in Contemporary Sciences Massimo Negrotti, 2004 The papers presented in this book deal with methodological and application problems which arise when models are compared to theories or when theories are to build models

Kyosei, Culture and Sustainable Technology Massimo Negrotti, Fumihiko Satofuka, 2006 We all are users of technology and services but the way we use them strongly depends on who our interlocutor is a machine a software application or a person The contributions of this volume look at the concept of the user from various perspectives and continue to discuss the theme started in volume three on the user of the artificial Topics

include man machine relations such as the user and the virtual world of the internet or users in various cultural contexts of the artificial. The second part of the book focuses on man nature relations and introduces the Japanese concept of Kyosei symbiosis in the context of technology and the environment. *Cultural Dimensions of the User* Massimo Negrotti, 2005. The concept of the user is not a well established sociological concept even though the user is omnipresent in our culture as someone who uses a device a machine the internet or a public service. Due to the close relationship between man and technology user studies have become very important. The papers assembled in this volume were presented at the Vth International Conference on The Culture of the Artificial The User of the Artificial Ascona Switzerland Monte Verit 23-25 April 2004. They deal with various aspects of the figure of the user. *Language, Culture, Computation: Computing for the Humanities, Law, and Narratives* Nachum Dershowitz, Ephraim Nissan, 2014-12-04. This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of his 75th birthday. The present three volumes *liber amicorum* several years in gestation honours this outstanding Israeli computer scientist and is dedicated to him and to his scientific endeavours. Yaacov's research has had a major impact not only within the walls of academia but also in the daily life of lay users of such technology that originated from his research. An especially amazing aspect of the temporal span of his scholarly work is that half a century after his influential research from the early 1960s a project in which he is currently involved is proving to be a sensation as will become apparent from what follows. Yaacov Choueka began his research career in the theory of computer science dealing with basic questions regarding the relation between mathematical logic and automata theory. From formal languages Yaacov moved to natural languages. He was a founder of natural language processing in Israel developing numerous tools for Hebrew. He is best known for his primary role together with Aviezri Fraenkel in the development of the Responsa Project one of the earliest fulltext retrieval systems in the world. More recently he has headed the Friedberg Genizah Project which is bringing the treasures of the Cairo Genizah into the Digital Age. This second part of the three volume set covers a range of topics related to the application of information technology in humanities law and narratives. The papers are grouped in topical sections on humanities computing narratives and their formal representation history of ideas the numerate disciplines law computer law and legal computing.
