Natural Forms of Defense Against Biological, Chemical and Nuclear Threats John Brighton, 2007-02-26 The events that took place on September 11th caused Dr John Brighton a naturopathic health consultant to ask himself questions about what role natural forms of healing might have in a scenario involving weapons of mass destruction WMD As he examined the issues and the nature of the threat he felt assured that a naturalistic approach could make a significant contribution in conjunction with that offered by conventional medicine Moreover he felt that to use both would provide a more powerful deterrent than if either were used alone The naturalistic approach would augment the use of drugs by adding 5 extra lines of defense aimed at supporting and strengthening the immune system to deal with such a dire event These lines include A psychological dimension A social dimension A preventative dimension An environmental dimension A specific dimension The whole idea of this holistic strategy is to employ prevention and immune enhancing factors in order to reduce the level of crisis to begin with As a result the dependency on antibiotics there are no effective antivirals and other valuable medical resources can be considerably reduced and most importantly preserved for when they would be needed most Another benefit of integrating these two systems would add what Dr Brighton calls synergistic complexity as a way to reduce the current crisis of germ resistance to many most potent antibiotics and to provide a holistic approach to all forms of WMD The book clarifies the scope of the threat we face by examining The variety of biological chemical and nuclear threats The factors involved in the creation of WMD The uncanny capacity of microbes to develop resistance to our medications The threat of bioengineering and the creation of superbugs How synergistic complexity could provide a possible solution A chapter is dedicated to focusing on the specific nature and challenges posed by each biological chemical and nuclear agent This includes A description of the agent How it causes harm How it might be used as a weapon and the possibility of it being used How it is detected diagnostically and in the field The conventional method of care and treatment The suggested natural forms of defense including herbs vitamins minerals and other natural substances and healing therapies The book ends with a forward looking chapter on emerging technologies that have promise of increasing our level of defense against WMD A bibliography and a full section on resources are available

Naturopathic Medicine Fraser Smith,2022-10-28 This book offers comprehensive coverage of naturopathic medicine The principles and values of this profession are already clearly stated i e Find and Treat the Cause Treat the Whole Person etc but few are the textbooks that provide a clear

exposition of what the approach is that differs from what is described as conventional or allopathic medicine The toolkit herbs or nutrients then becomes the defining feature but this is not the most important attribute To paraphrase the historian of medicine Harris Coulter in this approach the body reacts creatively to stressors and the Empirical school or natural medicine approach is more focused on supporting adaptive responses than suppressing symptoms Or to put it another way naturopathic physicians certainly do things to ameliorate symptoms but their real interest is to discern what disturbances to the determining factors of health lead to imbalances physiological dysfunction and are generating the symptoms This is not an attempt to argue that all health issues can get better on their own or that conventional medical interventions aren't capable of producing stellar outcomes Conventional medicine holds great value but there remains a concurrent need for a naturopathic approach that helps rebuild the body There is a need for an approach in medicine that works to support adaptive responses of the body reduce maladaptive responses address determining factors of health and sometimes create temporary homeostasis with agents such as drugs or certain natural medicines can play to maintain life when the body's healing responses are insufficient This book takes this approach and begins by examining what health is and then what states lead to disease In terms of the basis of disease states the book teaches about how the lack of coordination in the body's bioregulatory systems hormones nervous system cell signaling can lead to disease as well as the impact of irreversible degeneration genetic damage chronic stress etc The book takes the reader to some of the more common and well described reasons for these states of dysfunction including the body's inability to process environmental toxins and disruptions to the human microbiome The book then teaches how to assess a patient and how various natural therapies impact root causes of disease the long term consequences and the various clinical manifestations The book then takes a systems approach cardiovascular pulmonary etc This is where most books on the subject start but instead of breaking out a number of conditions and giving protocols of diet supplements herbs etc the author examines how to restore stability and function to that system There is in depth coverage of how to confront degenerative processes that make self healing far more challenging or perhaps not entirely attainable The application of the model of healing outlined in previous chapters is applied to each system Special topics are then covered ranging from lifespan primary care considerations to the role of research the rise of advanced data analytics as decision assistance to the environmental cultural and global determinants of health Each chapter will additionally include tables that summarize key diagnosis or treatment points arrayed in an order that reflects the model presented in the book This is an ideal guide for students in naturopathic medicine as well as physicians and medical professionals looking to learn more about this field aimed towards maximizing patient resilience
