Sachse,Mark Walker,2009-04-27 This book examines the Kaiser Wilhelm Institutes under Hitler illustrating the cooperation between scientists and National Socialists in service of autarky racial hygiene war and genocide *The Race for the Atomic Bomb* Norman Ridley,2023-04-06 On 19 December 1938 Otto Hahn working at the Kaiser Wilhelm Institute for Chemistry in

Berlin conducted an experiment the results of which baffled him. It took his migr collaborator Lise Meitner to explain that he had split an atom of uranium which at the time seemed to defy all known laws of physics. When Neils Bohr took this news to the United States it became clear to scientists there that these results opened a completely new and for some horrifying possibility of energy production that could be used for both peaceful and military purposes. Scientists in Germany, France, Britain and the US began to delve deeper into the implications. But it was the British government that was the first to explicitly describe how the splitting of the atom might be utilized to create a practical weapon of fearsome power. France, by then, had been occupied by the Germans and most of their nuclear scientists had fled to Britain. For their part, the Germans, who for a time were at the very forefront of nuclear research, had weakened their own scientific ranks by hounding many of their best scientists who had fled persecution under the draconian Nazi racial laws. They still retained, however, possibly the ablest nuclear scientist of them all in Werner Heisenberg, who set about developing his own program for nuclear power. British scientists made extensive progress before realizing that translating their laboratory results into the vast industrial enterprise required to build a bomb was way beyond the nation's stretched resources. The government agreed to hand over all the UK's research findings to America in return for a share of the spoils. The United States, for its part, was impressed with British results and invested enormous sums of money and resources into what became known as the Manhattan Project in a concerted effort to build a bomb before the end of the war. For much of the war, the Soviets showed little enthusiasm for the sort of investment required to build their own bomb. However, with an eye to the future, they established an extensive espionage network both in Britain and America. Following the German surrender, there was still the problem of Japan, and the race continued to develop a working bomb to accelerate the end of the war, both to save Allied lives and to prevent Soviet expansion into northern China and the Japanese mainland. It was a race that the United States won. It was also a race that ushered in a new Cold War.

**The Politics of Chemistry** Agustí Nieto-Galan, 2019-08-22 Agust Nieto Galan argues that chemistry in the twentieth century was deeply and profoundly political. Far from existing in a distinct public sphere, chemical knowledge was applied in ways that created strong links with industrial and military projects and national rivalries and international endeavours that materially shaped the living conditions of millions of citizens. It is within this framework that Nieto Galan analyses how Spanish chemists became powerful ideological agents in different political contexts, from liberal to dictatorial regimes throughout the century. He unveils chemists' position of power in Spain, their place in international scientific networks and their engagement in fierce ideological battles in an age of extremes. Shared discourses between chemistry and liberalism, war, totalitarianism, religion and diplomacy, he argues, led to advancements in both fields.

**The First War of Physics** Jim

Baggott, 2011-08-15 An epic story of science and technology at the very limits of human understanding the monumental race to build the first atomic weapons Rich in personality action confrontation and deception The First War of Physics is the first fully realized popular account of the race to build humankind's most destructive weapon The book draws on declassified material such as MI6's Farm Hall transcripts coded soviet messages cracked by American cryptographers in the Venona project and interpretations by Russian scholars of documents from the soviet archives Jim Baggott weaves these threads into a dramatic narrative that spans ten historic years from the discovery of nuclear fission in 1939 to the aftermath of Joe 1 August 1949's first Soviet atomic bomb test Why did physicists persist in developing the atomic bomb despite the devastation that it could bring Why despite having a clear head start did Hitler's physicists fail Could the soviets have developed the bomb without spies like Klaus Fuchs or Donald Maclean Did the allies really plot to assassinate a key member of the German bomb program Did the physicists knowingly inspire the arms race The First War of Physics is a grand and frightening story of

scientific ambition intrigue and genius a tale barely believable as fiction which just happens to be historical fact
