Neal E Miller Selected Papers On Learnin:

Neal E. Miller Neal Elgar Miller,1971 *Learning, Motivation, and Their Physiological Mechanisms* Neal E. Miller,2017-07-28 Neal E Miller's pioneering work in experimental psychology has earned him worldwide respect This second in a two volume collection of his work brings together forty three of Miller's most important and representative essays on learning motivation and their physiological mechanisms They were selected on the basis of their current relevance and their historical significance at the time they were published In order to emphasize the main themes essays on a given topic have been grouped together Learning Motivation and Their Physiological Mechanisms begins when the author first discovered the thrill of designing and executing experiments to get clear cut answers concerning the behavior of children and of rats The first study was one of the earliest ones on the behavioral effects of the recently synthesized male hormone testosterone The second was one of the earliest studies demonstrating the value of using a variety of behavioral techniques to investigate the motivational effects of a physiological intervention The next studies investigated the satisfying and rewarding effects of food or water in the stomach versus in the mouth and the thirst inducing and reducing effects of hyper and hypotonic solutions respectively injected into the brain The last study describes a technique devised for extending the analysis of the mechanism of hunger to the effects of humoral factors in the blood The study is completed with an examination of trial and error learning that was motivated by direct electrical stimulation of the brain and rewarded by the termination of such stimulation Other studies show that the stimulation via such electrodes not only elicits eating but also has the principal motivational characteristics of normal hunger The conclusion deals with a series of experiments that overthrows strong traditional beliefs by proving that glandular and visceral responses mediated by the autonomic nervous system are subject to instrumental learning which can be Neural Mechanisms of Goal-Directed Behavior and Learning Richard B. Thompson,2012-12-02 Neural Mechanisms of Goal Directed Behavior and Learning provides information pertinent to the neuronal mechanisms of motivation and learning This book focuses on the theoretical frameworks within which researchers analyze specific problems Organized into six parts encompassing 39 chapters this book begins with an overview of the problem of goal directed behavior that occupies a central position in psychology This text then examines the behavioral investigations that are directed at delineating the role of contiguity and determining the possible mechanisms of reinforcement in classical defense and reward conditioning Other chapters consider the homeostatic regulation of various functions such as nutrition temperature respiration blood pressure and fluid and electrolyte balance This book discusses as well the effects of experimental treatments on memory The final chapter deals with the relationship between perception and memory This book is a valuable resource for psychologists and scientists Graduate students in behavioral neuroscience will also find this book useful Learning As Self-organization Karl H. Pribram,Joseph S. King,2013-06-17 A year before his death B F Skinner wrote that There are two unavoidable gaps in any behavioral account one between the stimulating action

of the environment and the response of the organism and one between consequences and the resulting change in behavior Only brain science can fill those gaps In doing so it completes the account it does not give a different account of the same thing This declaration ended the epoch of radical behaviorism to the extent that it was based on the doctrine of the empty organism the doctrine that a behavioral science must be constructed purely on its own level of investigation However Skinner was not completely correct in his assessment Brain science on its own can no more fill the gaps than can single level behavioral science It is the relation between data and formulations developed in the brain and the behavioral sciences that is needed This volume is the result of The Fourth Appalachian Conference on Behavioral Neurodynamics the first three of which were aimed at filling Skinner s first gap Taking the series in a new direction the aim of the fourth and subsequent conferences is to explore the second of the gaps in the behavioral account noted by Skinner The aim of this conference was to explore the aphorism The motivation for learning is self organization In keeping with this aim and in the spirit of previous events this conference s mission was to acquaint scientists working in one discipline with the work going on in other disciplines that is relevant to both As a result it brought together those who are making advances on the behavioral level mainly working in the tradition of operant conditioning and those working with brains mainly amygdala hippocampus and far frontal cortex

An Introduction to Theories of Human Development Neil J Salkind,2004-01-22 This brief accessible core text provides a comprehensive view of the major developmental perspectives in a way that should appeal especially to students going on to applied careers in the social and behavioral sciences education and the human services and other helping professions Neither overly detailed nor unnecessarily technical it is intended as a basic introduction At the same time the author does not talk down or condescend to the reader He emphasizes the applied nature of these developmental theories not only in the text material but also with features such as boxed highlights The book is organized into five major parts beginning with an introduction to the primary concepts and important ideas about human development and research and then grouping various theories into four major theoretical perspectives maturational and biological psychodynamic behavioral and cognitive developmental before concluding with an integrative chapter that compares the various theories covered

Psychopathology of Human Adaptation George Serban,2012-12-06 Undoubtedly this symposium will prove to be an important landmark in the development of our understanding of the psychopathology of

human adaptation in general as well as of the general adaptation syndrome and stress in particular It was organized to give an opportunity to an international group of experts on adaptation and stress research to present summaries of their research that could then later be exhaustively analyzed The carefully structured program brings out three major aspects of adaptation to stress in experimental animals and man The first section deals with the neurophysiology of stress responses placing major emphasis upon the neuroanatomical and neurochemical aspects involved The second section is devoted to the psychology and psychopathology of adaptive learning motivation anxiety and stress The third section examines the role played by stress in the pathogenesis of mental diseases Many of the relevant subjects receive particularly detailed attention Among these the following are especially noteworthy The existence of reward and drive neurons Constitutional differences in physiological adaptations to stress and distress Motivation mood and mental events in relation to adaptive processes Peripheral catecholamines and adaptation to underload and overload Selective corticoid and catecholamine responses to various natural stimuli The differentiation between eustress and distress Resistance and overmotivation in achievement oriented activity The dynamics of conscience and contract psychology Sources of stress in the drive for power Advances in the therapy of psychiatric illness The application of experimental studies on learning to the treatment of neuroses

The Economic Analysis of Substance Use and Abuse Frank J. Chaloupka, Michael Grossman, Warren K. Bickel, Henry Saffer, 2009-02-15

Conventional wisdom once held that the demand for addictive substances like cigarettes alcohol and drugs was unlike that for any other economic good and therefore unresponsive to traditional market forces Recently however researchers from two disparate fields economics and behavioral psychology have found that increases in the overall price of an addictive substance can significantly reduce both the number of users and the amounts those users consume Changes in the full price of addictive substances including monetary value time outlay effort to obtain and potential penalties for illegal use yield marked variations in behavioral outcomes and demand The Economic Analysis of Substance Use and Abuse brings these distinctive fields of study together and presents for the first time an integrated assessment of their data and results Unique and innovative this multidisciplinary volume will serve as an important resource in the current debates concerning alcohol and drug use and abuse and the impacts of legalizing illicit drugs

Decision Making, Affect, and Learning Mauricio R. Delgado, Elizabeth A. Phelps, Trevor W. Robbins, 2011-03-24

Focuses on decision making and emotional processing investigating the psychological and neural systems underlying decision making and the relationship with reward affect and learning Considers neurodevelopmental and clinical aspects and looks at the applied aspects for other disciplines including neuroeconomics
