Pathogenic and Non-pathogenic Amoebae Baij Nath Singh, 1975 **Pathogenic and Non-Pathogenic Amoebae** B. N. Singh, 2013-12-31 *Surgical Pathology of the Gastrointestinal System: Bacterial, Fungal, Viral, and Parasitic Infections* Laura W. Lamps, 2011-04-08

Surgical Pathology of the Gastrointestinal System Bacterial Fungal Viral and Parasitic Infections provides a unique diagnostic reference text for the pathologic diagnosis of infectious diseases of the gastrointestinal tract. Written for the practicing surgical pathologist, this text combines the superior illustrations of an atlas with carefully written prose to create a useful diagnostic companion. The text is divided into four sections covering bacterial, fungal, viral, and parasitic infections of the gastrointestinal tract. The descriptive sections of each chapter are organized into short paragraphs for easy reference and include the use of tables to compare and contrast organisms and summarize differential diagnoses. Each chapter is extensively illustrated and contains prose discussions of diagnostic features, differential diagnoses, brief clinical descriptions, and ancillary tests that help confirm the diagnosis, i.e., immunohistochemistry, special histochemical stains, and molecular diagnostic techniques. *Surgical Pathology of the Gastrointestinal System Bacterial Fungal Viral and Parasitic Infections* provides pertinent clinical, diagnostic, and epidemiologic information that will be valuable to the practicing surgical pathologist. This volume will also help surgical pathologists gain familiarity with other contributory laboratory tests that are available to help confirm diagnosis.

The Cell Biology of Protist Parasite-Host Interfaces Carmen Faso, Adrian Hehl, 2022-04-28 **Host-Parasite Cellular and Molecular Interactions in Protozoal Infections** K.-P. Chang, David Snary, 2013-06-29

Tropical diseases such as leishmaniasis, malaria, trypanosomiasis, toxoplasmosis, and amebiasis continue to plague the world, resulting in considerable morbidity and mortality, especially in the third world countries. These diseases are caused by a group of protozoa which have over the years undergone evolutionary adaptation to live, often intracellularly, in a parasitic way of life. So well adapted have they become that they recognize the right hosts or cells to parasitize; yet at the same time they escape recognition and destruction by the host immune system. The mechanisms of such recognition and the escape of recognition are governed largely by host-parasite surface membrane interactions at the cellular and molecular level. Unique molecules produced by unusual pathways of these parasites have also been discovered and found to play important roles in their survival in the host. Understanding these mechanisms and pathways is essential not only to formulate a rational strategy for chemo- and immuno-prophylaxis and therapy but also to unravel the mystery of biological evolution in symbiosis and parasitism. In the advent of our knowledge on the molecular biology and biochemistry of parasite membrane and other molecules, it is opportune to examine and discuss their possible roles in host-parasite recognition and interaction in a comparative approach. To highlight the recent advances of this area in various host-parasite systems, a NATO Advanced Research Workshop was held from September 27 to October 1, 1986, at Hotel Villa del Mare Acquafredda di Maratea, Italy.
