Pathology Of The Ear And Temporal Bone:

Pathology of the Ear and Temporal Bone George Theodore Nager, 1993-10-01 **Schuknecht's Pathology of the Ear** Saumil N. Merchant, 2010 This book is a dedicated text to learn pathologic images seen during EUS The digital anatomy correlation used in this work is the natural continuation of efforts to apply the University of Colorado Visible Human data set to gastroenterology The Visible Human data set was created by Dr Vic Spitzer and colleagues at the University of Colorado and is currently housed at the university's Center for Human Simulation The data set consists of high resolution transaxial digital images captured as cadavers were abraded away at 1 mm or less depths These images are compiled into blocks of data and each structure is identified This information can be used to pull out and manipulate 3 D structures as well as allowing one to review planar anatomy in any orientation Using the Visible Human dataset one should be able to find a normal anatomy correlate to any image found during a EUS examination However as important as normal anatomy is it is the abnormal features which are the crux of an EUS examination Endosonographers are asked to define lumps bumps cysts to find correlates for symptoms and abnormal laboratory findings Accuracy requires a tremendous amount of skill and experience To help in this task we have assembled chapters from a world wide group of expert endosonographers These authors have shared their insight and images to help the readers of this work better see and understand some of the complexities uncovered during a EUS evaluation DVD showing techniques for removal of human temporal bones
